In every state the legislature took action to enlarge and intensify school programs for physical training and health education. Extension of health services showed results in a steady lowering of infant death rates and in better physical condition of children generally. The various health and school activities emphasized the great need in many areas to bring the facilities up to standards long exceeded in many states and cities.

Social Consequences.—Destruction of the material setting disrupted familiar patterns of daily life and disarranged institutions and conventions that give children signs and directions for their guidance. In all countries it became necessary to improvise special programs to engage the children and regulate them and also supplementary activities to enlist their enthusiasms and efforts for the common goals. The specific content of these programs varied among nations and among different parts of each population. In most countries, however, the schools and the various children's organizations operating out of school were used systematically both to develop special war services and to get children to take part in civilian or community services. Incidentally, taking part in these "extra" activities almost everywhere improved not only the bearing and spirits of the children, but their "regular" school work, in spite of many interruptions.

For vast numbers of children and adults, living conditions in occupied areas deteriorated to a level that made getting the barest necessities or keeping warm their chief concern. It had become so difficult to keep clean that past a certain point most people did not try; the results in lowered self-respect were more serious than the results in disease or infestation with fleas or lice. Preoccupation with mere subsistence destroyed ordinary conventional restraints, consideration for others and for the requirements of the community.

Being dominated by arrogant and ruthless intruders commonly depressed adults; and children reflected the mood in loss of enthusiasm and initiative. Physicians were aware that they had something more subtle to deal with than carbuncles or indigestion or anaemia. They discovered that their efforts were often thwarted by the sheer indifference of their patients.

Forced evacuations and violent displacement were cruelly devastating to the spirits of the children. Some measure of this was found in studies of children who were displaced in the British evacuation. There the separation of the child from the family was planned and orderly, and living conditions in the reception areas were on the whole favourable. Yet even for younger children, who went with their nurses or teachers, the sudden plunge into a new world of strange persons, strange ways, strange food produced marked emotional strains. The anxieties were revealed by bed-wetting, stealing, crying, indigestion, loss of appetite, nosebleed and aggressive or sulky behaviour. Indeed, it was found that the air raids seemed to cause less and the evacuations more emotional disturbance than had been anticipated. Children in occupied countries were subjected to even more painful displacements; they were confronted by cruel and unfriendly strangers, by harrowing atrocities. Hundreds of thousands were brutally treated, overworked and abused.

Children generally shared the high morale of their elders, as they shared in bearing privations and added difficulties or in efforts to combat the enemy. But incidentally, millions of children in all countries became habituated to theft, lying, deception, secretiveness, evasion. Such modes of dealing with others were often necessary in the struggle to survive or to help a family survive. And they acquired special merit when they served to harass or destroy the enemy. Many boys and girls became adept at various forms of sabotage, ingenious in sneaking through

military lines, skilful in obtaining useful information and in passing on misinformation where it would do the most harm.

The common moralities broke down generally among young people and children who became too far separated from their families or community activities. From the long-time point of view, the most serious consequences were likely to come from the fact that millions of children in Europe and Asia were completely detached from all guidance, all positive disciplines, all standards and ideals of social meanings or human values. When the war ended, millions were already out of hand. Sexual promiscuity became commonplace: quite generally the venereal diseases spread to lower and lower age levels, even in countries that never saw an "enemy."

Delinquency.—The rise of juvenile delinquency in countries at war was attributed to the disruption of homes, the absence of fathers from home, the deterioration of school and other regulatory agencies, removal of children from familiar suroundings and associates. In England, specific conditions related to the air raids were apparently important factors in the fluctuation of the delinquency rates. The conditions most frequently associated with offenses were the black-out, the dislocation of home life, wartime restlessness, disruption of school life, large earnings of youth fully employed, and deficiency in corrective and supervisory facilities.

Offenses by juveniles under 17 years of age increased sharply the first two years of the war, declined somewhat in 1942 and then increased again. For England and Wales, the summary figures from the magistrates' court were as follows:

Juveniles Found Guilty in Magistrates' Courts¹
1938 1939 1940 1941 1942 1943 1944 1945
55,270 52,814 65,771 72,105 66,179 67,659 67,636 72,940

The peak of delinquency, in 1940-41, coincided with the period of maximum air raids, with mass evacuation and absence of adults from home.

During the first year of the war in Europe, juvenile delinquency increased generally. In Belgium, *e.g.*, the number of juveniles brought into court increased from 14,550 in 1939 to 19,329 during the first year of German occupation.

Delinquency and crime increased generally. Children who went astray literally returned to plague communities that considered themselves innocent victims. Some observers reported a lack of delinquency in the U.S.S.R; if the soviet union was indeed exceptional in this regard, the reason may perhaps have been partly caused by the special effort to make each child feel that he was needed and had important work to do.

For a long time to come, wayward boys and girls would constitute a difficult problem in re-education, re-socialization, not to say re-humanizing. The breakdown of schooling added a special difficulty to the organization of orderly living, since gross ignorance in large masses had always been a fertile field for superstition, mysticism and unreason. But in the Netherlands, centres were set up for the rehabilitation and vocational training of adolescents.

Vagrant and homeless children were in many cases observed to develop their own solidarity and their own patterns of mutual aid and co-operation. Such spontaneous groupings might maintain social relationships and ideals at the level of adolescent "gangs," but they did

Ill-clothed and scantily fed, these children in the old quarter of Bratislava, Czechoslovakia, were typical of thousands of European children during the disorganization following World War II

indicate that children generally have native capacities for civic adjustment and for becoming loyal and dependable members of a community. It abandoned children developed serious antisocial or moral defects from being shut out of the larger brotherhood, from the fears and suspicions dominating their attitudes, they were still inalicnable elements of the raw material out of which mankind had to build its future.

The Family.—The social importance of the family was more dramatically emphasized in the deteriorations of personality than in the material privations suffered by children uprooted by the war. The affection and security that lead to self-assurance combined with responsibility and regard for others that society demands of all can come only from the family—that is itself accepted by the community.

The changes in the structure of the family as well as in the social, economic and cultural setting of modern life made it increasingly difficult for families to do by themselves what the community expected of parents in caring for and guiding children. World War II stressed the need for more special services and facilities to further the health, education and well-being of children which only the community can furnish.

In contrast to the teenagers, more and more excluded from the life of the adult community, the young people in all countries at war were keyed up to a high pitch of enthusiasm and self-assurance by the chance to take part in important activities. The end of the war threatened to deflate their spirits unless special efforts were made to enlist their interest and devotion through education and occupational opportunities to become responsible and self-respecting men and women in their communities.

Women carried a great share in the war on all levels of service and in all countries. This experience sharpened the issues as to woman's place in modern society, which were taking form for several generations. No traditional formula could be accepted as a standard. Various patterns

of family life would undoubtedly develop, but in all cases it would become necessary to reconcile the need of children for what only home and mother could give with the needs of women as persons and as participants in the life of their times. It became increasingly important for communities to help homes with new technical and professional services and to find constructive adjustments among the several roles that women have to play. (See also CHILD WELFARE; EDUCATION).

Children's Books

The ten years 1937-46 produced a formidable array of children's books, but the high calibre of many of the titles was evident. The Newbery award, made annually for the most distinguished book of the previous year, and the Caldecott award, also given annually to the illustrator of the most distinguished picture book of the previous year, well represented the tastes and interests of the child. In 1937 the book awarded the Newbery medal was Ruth Sawyer's Roller Skates; Kate Seredy and her book The White Stag won it in 1938; Thimble Summer by Elizabeth Enright was awarded it in 1939; Daniel Boone by James Daugherty in 1940; Call It Courage by Armstrong Sperry in 1941; The Matchlock Gun by Walter Edmonds in 1942; Adam of the Road by Elizabeth Gray in 1943; Johnny Tremain by Esther Forbes in 1944; Rabbit Hill by Robert Lawson in 1945 and in 1946 Lois Lenski and her Strawberry Girl received the award. The Caldecott medal was awarded for the first time in 1938 and went to Dorothy Lathrop for her illustrations in Animals of the Bible; to Thomas Handforth for Mei Li (1939); to Ingri and Edgar D'Aulaire for their Abraham Lincoln (1940); to Robert Lawson for They Were Strong and Good (1941); to Robert McCloskey for his Make Way for Ducklings (1942); to Virginia Burton for The Little House (1943), to Louis Slobodkin for his illustrations in Many Moons by James Thurber (1944); to Elizabeth Jones for her drawings in Rachel Field's A Prayer for a Child (1945) and in 1946 to Maud and Miska Petersham for The Rooster Crows, a Book of American Rhymes and Jingles.

Rise to a Peak.—Two outstanding picture books by distinguished artists characterized 1937. Conrad Buff, in his illustrations for Mary Buff's Dancing Cloud, used strong desert colours to paint scenes of Navaho life. Quite different were the black and white drawings of Robert Lawson, who energetically interpreted the old nursery rhymes and ballads in Four and Twenty Blackbirds, compiled by Helen Fish. Two highly imaginative and amusing stories for younger children were Marjorie Flack's Walter, the Lazy Mouse and And to Think that I Saw It on Mulberry Street by "Dr. Seuss," the latter depicting in colourful comic art what happened when a boy with a lively imagination lived on a humdrum street. Fanciful tales were represented by Richard Hatch's whimsical Curious Lobster and by the Idyllic Martin Pippin in the Daisy Field of Eleanor Far-

jeon. A traditional fairy tale was the Seven Simeons with its delicate and decorative art work by the author-illustrator Boris Artzybasheff; the robust hero of the American cowboy was immortalized in Pecos Bill by James Bowman. Fiction took on various aspects, ranging from Arna Bontemps' Sad-faced Boy, to the pioneer tale On the Banks of Plum Creek by Laura Wilder, to the calm, quiet family scenes and joys of Alice-all-by-Herself by Elizabeth Coatsworth. Older boys and girls read The Great Tradition by Marjorie Allee, a picture of life at the University of Chicago, and Wind of the Vikings by Maribelle Cormack. The intrepid Polynesian explorers who sailed the sea lanes of the Pacific to reach finally the civilizations of the ancient Mayas and Incas were portrayed in Eastward Sweeps the Current by Alida Malkus. Non-fiction was represented by Julia Davis' No Other White Men, a dramatic account of the Lewis and Clark expedition; by an anthology of poetry Under the Tent of the Sky compiled by John Brewton and by The Boy Shelley of Laura Benet.

Picture books assumed a cosmopolitan air in 1938, for Ludwig Bemelmans in Quito Express wrote of a little Inca boy; Claire Bishop in The Five Chinese Brothers retold a humorous folktale; Munro Leaf, with the able assistance of the artist Robert Lawson, solved the problem of Wee Gillis and his conflicting Scotch loyalties; Nikolai Radlov presented Russian animal fables in The Cautious Carp and Other Tales and James Daugherty in Andy and the Lion gave a new twist to the old Greek tale of Androcles and the lion. Traditional literature was represented in fresh form by Ingri and Edgar D'Aulaire's translation of East of the Sun and West of the Moon, in Paul Leyssac's translation of Andersen's It's Perfectly True and

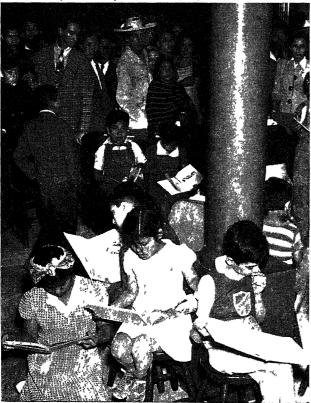

Illustration by Robert Lawson for Munro Leaf's Wee Gillis (1938)

Other Stories, in Merriam Sherwood's The Song of Roland and in Moritz Jagendorf's Tyll Ulenspiegel's Merry Pranks. Humour was found in The Three Policemen by William Du Bois, in Mr. Popper's Penguins by Richard and Florence Atwater and in the attractive new edition of Kenneth Grahame's The Reluctant Diagon, while The Hobbit, by John Tolkien, assumed permanent place on the shelves of the modern fanciful tale. Historical stories for young and old were represented by Mabel Hunt's Benjie's Hat and Phyllis Crawford's "Hello, the Boat" Christopher Plantin was featured in At the Sign of the Golden Compass by Eric Kelly and the yearning of a boy for a dog was expressed by Marguerite De Angeli in Copper-toed Boots. Shuttered Windows by Florence Means showed the need for adjustment by a northern Negro girl to the conditions and philosophy of her great-grandmother's people in South Carolina, while in The Iron Duke by John Tunis, an Iowa lad had equally serious problems of adjustment. Two outstanding stories with an English setting were The Far Distant Oxus by the teen age authors, Katharine Hull and Pamela Whitlock, and We Didn't Mean to Go to Sea by Arthur Ransome. Biography was enriched by Jeanette Eaton's Leader by Destiny (Washington), by Elizabeth Gray's Penn and by the growing-pains of The Young Brontës by Mary Jarden.

In 1939, the small child's delight in mechanical objects was satisfied by Virginia Burton's Mike Mulligan and his Steam Shovel, while funny bones were tickled by Ludwig Bemelmans' Madeline. Those liking suspense were rewarded by the fine writing and colour work in Cockadoodle doo by Berta and Elmer Hader, while Let's Go Outdoors by Harriet Huntington answered the nature

Mexican children examining juvenile literature at the U.S. exhibit during the fourth Mexican book fair in 1946. Nineteen nations were represented by more than 2,000,000 volumes

questions of the very young. Two noteworthy books with social implications were the poetic I am a Pueblo Indian Girl of Louise Abeita and the straight-forward Tobe of Stella Sharpe, illustrated with photographs of the daily activities of a rural Negro family. The need for laughter was supplied by Robert Lawson's inimitable Ben and Me, and Katharine Gibson in Cinders provided a sequel to Cinderella. The perennial interest in boys and their pets ranged from Alaska in Panuck, Eskimo Sled Dog by Frederick Machetanz, to the Philippines in Lucio and His Nuong by Lucy Crockett, to the West Indies in the hilarious Mouseknees of William White. The American scene was covered from 1837 in Stephen Meader's Boy with a Pack, to 1875, in Marjorie Allee's Runaway Linda to the colourful, turbulent days of frontier life in the Dakotas in the '70s and '80s in All the Days were Antonia's by Gretchen McKeown and F. S. Gleeson. Youth and modern problems were capably handled by Marjorie Bianco in Other People's Houses, and Dirk's Dog Bello by Meindert De Jong added another title to the list of favourite dog stories. The Singing Tree by Kate Seredy, a sequel to The Good Master, was a plea for world peace and understanding. Three biographies whose central characters were of European origin and whose paths led to America were Enchanting Jenny Lind by Laura Benet, Columbus Sails by Walter Hodges and Runner of the Mountain Tops, the story of the life and questings of Louis Agassiz, by Mabel Robinson. Other nonfiction interests ranged from Edwin Teale's Boys' Book of Insects to Marshall McClintock's Here is a Book.

Picture books continued gay and carefree in 1940 with the intrepid Hercules; the Story of an Old-Fashioned Fire Engine by Hardie Gramatky leading the parade. Claire Newberry, in her April's Kittens, told of the complications three new kittens bring to a "one cat apartment." Presents for Lupe was of a South American squirrel, illustrated in colour by Dorothy Lathrop, while Robert Mc-Closkey in Lentil delighted with the saga of an American boy and his harmonica, and The Great Geppy of William Du Bois brought many chuckles. Henri Christophe was presented in fictionized form by Covelle Newcomb in Black Fire and a selection of poems of Paul Dunbar appeared under the title of Little Brown Baby. Young Mac of Fort Vancouver by Mary Carr depicted early days on the Columbia, John Newbery's book store was immortalized by Alice Dalgliesh in A Book for Jennifer and Marguerite De Angeli wrote understandingly of the antics of a lively Quaker girl in Thee, Hannah! Sincerity, courage and an understanding of those less fortunate made Blue Willow, by Doris Gates, one of the brightest spots in the year. Animal stories were represented by Eric Knight's Lassie Come-Home and by On Safari by Theodore Wal deck. An unusual book was Mabel Pyne's pictorial Little History of the United States; Paul Revere's story was found in the simple biography, Early American by Mildred Pace. Biographies of writers were competently handled by May Becker in Introducing Charles Dickens, by Eulalia Grover in Robert Louis Stevenson, by Jeannette Nolan in Gay Poet; the Story of Eugene Field and by Claire Purdy in He Heard America Sing; the Story of Stephen Foster. Anna Hall in Nansen dramatically presented a famous explorer and humanitarian. Call of the Mountain by Cornelia Meigs was a mature junior novel, Fair Adventure by Elizabeth Gray was a story of modern youth. Traditional tales were represented by Eula Duncan's Big Road Walker, by the distinguished prose re-telling by Babette Deutsch of The Heroes of the Kalevala. Warren Chappell's book design and illustrations added greatly

A peak of children's book publishing was reached in 1941. Wanda Gag introduced colour into her illustrations for Nothing at all; Curious George concerned the lively antics of a monkey told and illustrated by Hans Rey, and Jo and Ernest Norling launched their popular series of informational picture books with Pogo's House; the Story of Lumber. Virginia Burton poked good-natured fun at the comics in Calico, the Wonder Horse, while Holling C. Holling's Paddle-to-the-Sea was a fortuitous blending of striking art work and strong text. Dorothy Lathrop's Colt from Moon Mountain was a delicate fantasy in contrast to the sturdy, realistic The Moffats of Eleanor Estes. Kate Seredy wrote poignantly in A Tree for Peter, and Elizabeth Tarshis added to the growing understanding of Mexico with The Village that Learned to Read. Older boys enjoyed Merlin Ames' Canthook Country, a story of lumbering in Wisconsin, and in The Saturdays, Elizabeth Enright gave a gay picture of family life in New York city. Tall tales of America were gathered by Ann Malcolmson in Yankee Doodle's Cousins, illustrated by Robert McCloskey. Richard Rostron made a contribution in The Sorcerer's Apprentice, illustrated in gay mood by Frank Lieberman. Biographies of three American leaders appeared: Poor Richard by James Daugherty, Haym Salomon by Howard Fast and Walt Whitman; Builder for America by Babette Deutsch. Leif the Lucky by Ingri and Edgar D'Aulaire and Finlandia: The Story of Sibelius by Elliott Arnold brought figures of Scandinavian countries to the attention of American boys and girls. Other nonfiction interests were represented by Ann Clark's simple account of the Indians of the Southwest in In My Mother's House and by Maud and Miska Petersham's novel American ABC. Mabel Pyne met the needs of younger children with her pictorial Little Geography of the United States. Lost Worlds by Anne White was a notable contribution to the field of archaeology, and Genevieve Foster, in George Washington's World, extended horizons and related the American scene to world activities of the period. Louis Untermeyer successfully introduced young people to poetry through Stars to Steer by.

Shadow of War.—Fewer children's books were published in 1942; a conscious stress on American ideals and the glory of America's heritage was noticeable, books with the shadow of war across their pages appeared and even the picture books had a more sober air. Mary and Conrad Buff in Dash and Dart combined poetic prose with magnificent art work; more carefree was The Story of Pancho and the Bull with the Crooked Tail by Berta and Elmer Hader; Mother Goose received new and unexpected treatment by Feodor Rojankovsky in his Tall Book of Mother Goose. Stories for the middle age group ranged from the philosophical East Indian Gift of the Forest by Reginald Lal Singh and Eloise Lownsbery to the story of the ubiquitous Mr. Bumps and his Monkey by Walter De La Mare; from the Cornish Doll Who Came Alive by Enys Tregarthen to the American winter's tale of The Long White Month by Dean Marshall and the carefree Houseboat Summer by Elizabeth Coatsworth. The American historical scene was also featured: Isabella McMeekin's Iourney Cake was a family's trek west to Kentucky in 1793, Gunsmith's Boy by Herbert Best was of the sufferings of 1816 and Kathryn Worth's They Loved to Laugh was North Carolina in the 1830s. Folklore was represented by Arna Bontemps and Jack Conroy in Fast Sooner Hound, by Harold Courlander in Uncle Bouqui of Haiti and by Irwin Shapiro in How Old Stormalong Captured Mocha Dick. An awareness of minority groups, their problems and the need for a practised democracy was noticed in Valenti Angelo's Hill of Little Miracles, in John Tunis' All-American and in Steppin and Family by Hope Newell. Outstanding in the nonfiction field were biographies and books dealing with the arts, of the latter Pictures to Grow up With by Katharine Gibson, Tune Up, a book of musical instruments by Harriet Huntington and Walter De La Mare's collection of poems Bells and Grass were all to be remembered. Biography ranged from Leonardo, Master of the Renaissance by Elizabeth Lansing, to Dancing Star (Pavlova) by Gladys Malvern, to a piece of Americana in the careers of Charles Stratton and P. T. Barnum in "Have You Seen Tom Thumb?" by Mabel Hunt.

The publishing of books was drastically cut by 1943; formats were affected by wartime restrictions, changes in weight of paper and type of illustration were necessary, yet children's books on the whole remained attractive. The war influenced the subject matter, as was to be expected. Of the picture books not so affected, Don't Count Your Chicks by the D'Aulaire's and Small Rain, a book of Bible selections, compiled by Jessie Jones and illustrated by her daughter Elizabeth Jones were memorable. A recognition of the need for spiritual values was seen in Rafaello Busoni's Somi Builds a Church. Gaiety and laughter were present in Gigi by Elizabeth Foster, in the rollicking episodes of Homer Price by Robert Mc-Closkey and in Mary Poppins Opens the Door by Pamela Travers.' Saint-Exupéry's Little Prince and Julia Sauer's Fog Magic were among the imaginative tales of distinction; folklore of Alaska and the Southern mountains was represented by Charles Gillham in Beyond the Clapping Mountains and Richard Chase in Jack Tales. Older girls appreciated the modern problems presented in Lavinia Davis' Stand Fast and Reply and enjoyed Laura Wilder's last book of the Ingalls family in These Happy Golden Years. Boys entered into the adventure of Starbuck Valley Winter by Roderick Haig-Brown and Gregor Felsen's Struggle is our Brother, while those craving mystery stories read Thief Island by Elizabeth Coatsworth. Two books of information with picture book format were Ann Hark's Story of the Pennsylvania Dutch and Henry Kane's Tale of the Crow. Mechanically-minded boys read What Makes It Tick? by Katharine Britton, and the interest in exploration and high adventure was answered by Mary Lucas' Vast Horizons. David Ewen wrote sympathetically yet realistically in his Story of George Gershwin and Hendrick Van Loon gave fresh interpretation to his subject in The Life and Times of Simon Bolivar.

During 1944, war-time formats continued to be much in evidence, and the 'slim book' seemed to acquire permanence. Despite publishing difficulties, the picture book harvest was a rich one. Georgie was the tale of a friendly ghost by Robert Bright, Katy No-Pocket by Emmy Payne, illustrated by Hans Rey, was about a kangaroo; boys and their problems were featured in the picture books, as in Angelo, the Naughty One by Helen Garett illustrated by Leo Politi; in Yonie Wondernose, the Amish boy, by Marguerite De Angeli and in the lively imaginings of Magic Michael by Louis Slobodkin. Lullaby by Josephine Bernhard was a reverent Polish folktale ideal for Christmas use. Caddie Woodlawn reappeared in Magical Melons by Carol Brink, Shoo-Fly Pie by Mildred Jordan was an amusing story of Pennsylvania Dutch, and Eleanor Estes in The Hundred Dresses wrote poignantly of a child's sufferings because she was "different." A modern fairy 631

tale was The Great Quillow by James Thurber. Older girls enjoyed the naturalness of Granite Harbor by Dorothy Bird, envied and yearned to be like the heroine in Alice Dalgliesh's Silver Pencil and endured again the hardships of the pioneers in Erick Berry's Hearthstone in the Wilderness. Older boys had a variety, from Wilderness Champion by Joseph Lippincott, who combined a dog story with adventure in the wilds of Canada, to Buckeye Boy by Marjorie Medary, about early newspaper days in Ohio. The realm of nonfiction was a rich one, with Travellers All by Irma Webber being a simple account of the travels of plants; Electronics for Boys and Girls by Jeanne Bendick kept pace with the times; Abraham Lincoln's World by Genevieve Foster offered a background for understanding world events, and One God, the Ways we Worship Him by Florence Fitch was a book long needed. Biography largely concerned those who had fought for freedom of thought and action, as in Lone Journey (Roger Williams) by Jeanette Eaton, in Dr. George Washington Carver, Scientist by Shirley Graham and G. D. Lipscomb and in Peter the Great by Nina Baker. Raymond L. Ditmars by Laura Wood fascinated both boys and girls, bringing in much of the contemporary

Picture books in 1945 seemed less gay and spontaneous, though Little Lost Lamb by Golden MacDonald was outstanding for the quality of the art work of Leonard Weisgard; Russia was the setting for the delightful My Mother is the Most Beautiful Woman in the World by Rebecca Reyher. Lee Kingman in Ilenka gave a different picture of Russian life, while democracy at work in the United States was the theme of Lorraine and Jerrold Beim's Two is a Team. The modern fanciful tale was well handled by Phyllis McGinley in The Plain Princess. Jean Bothwell in Little Boat Boy demonstrated the universality of boy-

One of Doris Lee's illustrations for *The Great Quillow*, by James Thurber, a story of how an ingenious toymaker outwitted a giant. The book appeared in 1944

hood in her story of India, and Delia Goetz offered humor in The Burro of Barneygat Road. Wind Island by Hedvig Collin was sensitively written, and Justin Morgan Had a Horse by Margaret Henry pleased both boys and girls. Older boys lived 4-H activities with Gid Granger by Robert Davis and older girls faced modern problems with Sandy by Elizabeth Gray. A well written historical story was Katharine Gibson's Arrow Fly Home, and Irish wit and imagination characterized Maura Laverty's Gold of Glenaree. Three stories with social implications were Doris Gates' North Fork, concerning the Indians of California, Call me Charley by Jesse Jackson concerning the Negro, and The Moved-Outers, a fearless and unemotional story by Florence Means of a Japanese relocation centre in Colorado. The nonfiction field showed variety in Alex Novikoff's Climbing Our Family Tree, in Ruth Brindze's Gulf Stream and in Katherine Shippen's New Found World. Barbara Geismer compiled, with others, an anthology Very Young Verses and Norma Cohn in Little People in a Big Country added to the child's appreciation of poetry and art.

By 1946, there was a number of new editions of old favourites, and titles temporarily out of print during the war years were made available again. Many popular authors and illustrators made contributions, the D'Aulaire's in Pocahontas and Louise S. Bechtel in The Brave Ban tam, illustrated by Helen Sewell were welcomed back. Leonard Weisgard's pictures were a distinct feature of Golden MacDonald's Little Island; Grace Paull tickled the funny-bone with Pancakes for Breakfast, and Muriel Fuller in The Runaway Shuttle Train added to the pleasure of the mechanically minded little boy. Folk and fairy tales were represented by the compilation Big Music by Mary Bleecker, by Pura Belpre in The Tiger and the Rabbit and by Eileen O'Faolain in Miss Pennyfeather and the Pooka. Horse stories for girls were popular with Regina Woody's Starlight standing out; Strawberry Roan, by Don Lang, pleased boys, as did Cowboy Boots by Shannon Garst. Vanya Oakes in The Bamboo Gate wrote of modern China and Phyllis Coté in The People Upstairs was again successful in her portrayal of happy family life. Authors whose works had won previous acclaim were represented in John Tunis, Howard Pease and Stephen Meader while Alice Dalgliesh wrote a sequel in Along Janet's Road. Marguerite De Angeli, Jo Besse Waldeck and Katherine Eyre also published stories and Nancy Barnes in The Wonderful Year pleased girls of the middle grades. Astronomy, natural science and paper-making were handled adequately and biographies were popular. The first postwar year was a rich one.

Books on Reading.-Many books about children's reading interests and habits, and often concerned with the children's books themselves, appeared during the decade. In 1940 Anne Eaton in Reading with Children gave concrete, practical suggestions as to books boys and girls had enjoyed. The previous year, My Roads to Childhood appeared, a selective compilation of many of Anne Carroll Moore's essays on children's authors, illustrators and on children's reading itself. In 1944 Annis Duff, a mother. librarian and author, wrote of her family's joy in reading together and living daily with books in Bequest of Wings and that same year, out of war-torn France, came Paul Hazard's scholarly and very human Books, Children and Men. With such to inspire and guide the adult, the right and opportunity of children to enjoy their reading seemed assured for years to come.

Child Welfare

The first two years of the period 1937–46 revealed a general movement toward improving the conditions of child life, although under the retarding effects of the uncertain international situation. With the outbreak of World War II in Sept. 1939 children began to suffer from lack of food, loss of parents and home, displacement, disease and other misfortunes, with grave consequences for their future. Great numbers of them, who would have survived in normal times, lost their lives. The extensive relief work done in devastated areas by several organizations, notably the United Nations Relief and Rehabilitation administration could not meet all the needs. In the countries that were not involved in the war, children were also affected by the reduced supply of the necessities of life and by other war consequences.

The end of hostilities was followed by a general movement for reconstruction and for the preparation of a better future for children. Plans for aiding in this work through international effort were considered by those agencies of the United Nations devoted to social and humanitarian purposes. At the same time, rebuilding on behalf of children began in a number of individual countries.

Continental Europe

Child Health in France.—Particularly extensive plans were reported from France in 1945, where the government ordered the organization of health services for children on a nation-wide scale. For this purpose the departments (administrative divisions of the territory of France) were divided into districts, each to have a prenatal clinic, a clinic for babies and young children and another for preschool children. Women were required by law to go to the prenatal clinics for at least three examinations during pregnancy and one in the month after childbirth. These visits were made a condition for receiving the various benefits paid under the social security laws.

Medical supervision was also instituted over the health of children. Well babies and preschool children had to be brought at stated intervals to the clinics for medical examinations, and regular attendance was rewarded by prizes to the mothers. Special attention was given at these clinics to children not receiving proper care in their own homes. Supervision over the work was entrusted to the

public health officials of the department.

Also in 1945, in an effort to improve the school children's health, a law was enacted for the setting up of a nation-wide uniform system of school-health services, which until then were available only in some localities. The parents or guardians were now required to present their children for free medical examinations; during the sixth year, before the beginning of the school-attendance period. Medical care for any illnesses discovered in the course of these examinations had to be provided by the parents at their expense. All children attending school were required to submit themselves to medical examinations at specified intervals; the cost of this service was borne jointly by the parents and the government. Teachers and other employees of the school coming in regular contact with the children were also required to undergo regular examination.

The employment of social workers in connection with the health services for mothers and children likewise was required after 1945. Specific measures were prescribed for enforcement of the laws, which were to be put into effect by degrees.

Another French reconstruction measure was an increase in the various benefits paid to parents since before the war in an effort to raise the birth rate and to provide better care for children. The regulations on this subject were combined in one law on Aug. 22, 1946, retroactive to July 1, 1946. They called for the following payments:

- 1. Childbirth benefits payable in the form of a lump sum on the birth of each child, provided specified conditions were met as to the mother's age and the period of time elapsed after marriage or after the previous childbirth.
- 2. Family allowances for the second and each subsequent child, from birth until the end of the compulsory school-attendance period and later, if the child continued his studies or was unable to work because of a permanent disability.
- 3. Single-wage benefits for couples whose income consisted of the wages of husband or wife only. This benefit was to be paid, beginning with the first child, for the same period as the family allowance and in addition to it. The rate of payment of the family allowances and single-wage benefits varied with the number of children and the locality.
- 4. Prenatal benefits, intended to help meet the expenses incidental to childbirth and payable in the combined amount of the family allowances and the single-wage benefits. They were paid from the day on which the mother reported her pregnancy in her application for these benefits and until the end of the pregnancy. Under some conditions the payments were made for nine months. The benefits were made conditional on the mother's attendance at a prenatal clinic and her observance of the instructions issued there. All these benefits and allowances were paid through the social security funds, to which contributions prescribed by law were made by the workers, the employers and the state.

To achieve unity and greater effectiveness in health services, the government in 1945 placed under the control of the public-health authorities all maternity hospitals, child-health centres, clinics for children and day nurseries.

The legislation on sickness and maternity insurance, which had been in operation in France for 15 years, was revised in 1945. As formerly, it extended its protection to mothers and children. An employed worker, whether man or woman, who was subject to insurance, received

cash benefits in case of illness. In addition, the insured person and dependents received medical care and medicines. Medical care was also provided in pregnancy and childbirth to a woman insured in her own right and to the wife of an insured man. The former received also a daily cash benefit for six weeks before childbirth and eight weeks afterward, on condition that she gave up paid employment during that time.

Russian Program for Child Health.—In the soviet union, the national policy of giving careful attention to the needs of mothers and children was continued throughout World War II. In the face of many difficulties the government laid particular stress not only on maintaining the health services at prewar levels but also on improving them. To this end, measures were taken in 1942 for the appointment of a sufficient number of physicians to the staffs of child-health centres in the territories which were not invaded by the Germans. In the same year the government ordered the division of the country into districts with a pediatrician in each for supervising child-health services.

Efforts to counteract the ravages of the war were seen in the often-quoted law of July 8, 1944. By this law, the government was directed to establish in various localities additional child-health centres, milk stations, day nurseries and other facilities. The law also ordered: (1) the lengthening of the period of maternity leave for women employed in factories and offices to a total of 77 days, during which time their employment was prohibited and their wages paid in part or in full; (2) an increase in the childbirth allowances paid under social insurance to help the mother obtain clothing and other articles for the baby; (3) an increase in the grants available since 1936 to mothers for the care of their children-grants consisting of single payments, varying with the number of children born previously and payable at the birth of each child, beginning with the third, and of monthly allowances beginning with the fourth child and payable for four years from that child's first birthdate to his fifth; and (4) aid to unmarried mothers paid monthly for each child from birth until the age of 12 years.

Official statements on the enforcement of this law revealed in 1945 and 1946 the organization after July 1944 of additional facilities in many localities in compliance with the law, although in other regions the public authorities failed to do so. Among the new facilities mentioned were 25,000 maternity beds, day nurseries for 60,000 children and sanatorium-kindergartens for 45,000 children. Also, as a result of the increased medical personnel, 86% of childbirths in the cities were attended by physicians during the first half of 1945, against 71% in 1943. The proportion of children under one year of age brought up under the supervision of child-health centres went up to seven-eighths for the entire country.

Sanatoriums for children in farming districts, homes for unmarried or widowed mothers with their children, schools for parents and institutions for war orphans were opened in large numbers. Greater attention was given to children's vacations, and permanent committees for increasing the number of vacation camps were organized as parts of the municipal governments.

A project for still more comprehensive maternal and child-health services was included in the fourth five-year plan for the reconstruction of the country, approved by the government in March 1946.

Health Measures in Sweden.-Sweden, which was for-

tunate to escape the devastation of World War II, still felt the stress of war in food shortages and other economic restrictions. Nevertheless, the country proceeded on its usual course of forward-looking social action.

The reforms in maternal and child health ordered by the laws of 1937 were implemented in the following year, and the work continued, with a gradual expansion, even during the war. Under these reforms the government made grants to the administrative districts and to the cities outside these districts for maintaining prenatal clinics and child-health centres. At the clinics, women were examined during pregnancy and treated for disorders connected with it. Babies and young children were examined at the child-health centres, and their growth and development were watched; measures were taken in case a child failed to receive proper care in his home. All these services were free.

Also after 1937 the government had given financial aid in a specified amount, at the time of childbirth, to women of small means not covered by sickness insurance. Through these funds, advice was also provided to each woman on care of herself during pregnancy, confinement and the postpartum period, and on care of her child. At the same time additional aid was introduced, again from the government treasury, in the form of gifts or loans up to a certain amount, to indigent women during pregnancy or soon after childbirth. Specially established local "boards of aid to mothers" made certain that the money was used for the proper purpose.

Free attendance at childbirth for all women was made possible under a law of 1937 which was revised in 1943. The country was divided into midwives' districts, in each of which one or more midwives were employed. Their salaries were paid from the national treasury on condition that they attend cases of childbirth without charge. Early in 1944 the salaries of these midwives were increased, and new regulations on continuation courses for them were issued.

Health services for school children, which prior to 1941 existed only in the larger cities, were extended in 1945 to smaller cities and rural districts with government grants for the employment of physicians and nurses. From 1937 annual grants had been made by the government for school lunches, which previously were provided in some cities at the expense of the city or town or of private organizations. A decree of 1946 provided government aid for free school lunches for all children not only in the primary schools, as previously, but also in intermediate, high and technical schools.

Day nurseries, kindergartens and after-school centres were placed under government control in 1943 and received government aid. Such aid was available also to provide free vacation travel for children and, separately, for mothers of low-income families.

Dental care for the general population, including children, had been available since 1939, either free or at a nominal charge.

Other measures in Sweden called for: (1) monthly allowances, payable under a law of 1937, for the benefit of children under 16 who were orphans, or whose mothers were unmarried, or whose parents were permanently incapacitated; (2) government aid, begun in 1945, to administrative districts and independent cities for the establishment of clinics for the treatment of mental disorders in children; and, (3) supervision, begun in 1946, by a government agency over children less than 16, placed in foster families for pay or free of charge, whereas previously such supervision applied only to children placed for pay.

Day nursery for Polish children being conducted against the background of Warsaw's ruins after the close of World War II

School Attendance and Employment.—A movement for raising the school-leaving age and with it the minimum age for employment, begun before 1937, was interrupted by the outbreak of war. The school-leaving age in France was raised late in 1936 from 13 to 14 years, and in 1946 measures were prescribed for better enforcement of this law. Norway, by a law of 1936, effective in 1937, prolonged compulsory school attendance until the child finished a specified grade, which might be between the ages of 14 and 16 years. The minimum age for full-time employment was correspondingly raised in both countries. In Switzerland, where school attendance was regulated by the individual cantons, a federal law of 1938 raised the minimum age for full-time employment from 14 to 15 years with the consequent necessity for the cantons to raise the school-leaving age. Annual vacations with pay for workers under 18 were made obligatory on employers in Finland, France and Sweden in 1946.

Services and Family Allowances.—In Finland, all child-welfare work was centralized in one official national agency, established under a law of 1936 which became effective in 1937. This agency functioned with the aid of a network of local welfare boards. The boards or their child-welfare divisions were entrusted with the care of children under 16 who were dependent, or morally or physically neglected, or had violated a law, and those under 18 engaged in occupations prohibited to them by law.

Family allowances were paid monthly to workers with dependent children, in addition to their wages, out of a fund financed, as a rule, by specified contributions from employers and administered by the government. Such allowances were in operation in several European countries before 1937. After that time they were introduced in Hungary by a law of 1938; in the Netherlands, 1939; Spain, 1938 and 1941; and Czechoslovakia, 1945. In France the previously enacted laws were amended and codified in

1939 and 1946. In Italy and Germany, the application of the system was extended to additional groups of workers in 1937 and 1940 respectively.

Juvenile Courts.—Juvenile courts, which had been functioning in many European countries before 1937, were introduced in Rumania and Luxembourg by laws of 1937 and 1939. Changes were made in the legislation of several other countries.

France, in an effort to deal with increased juvenile delinquency, completely revised in 1945 a juvenile court law passed in 1912. The new law stressed the importance of probation and of more effective use of social-welfare measures in the treatment of young offenders.

In the soviet union, where a special procedure for dealing with cases of young offenders had been followed for some years, the government in 1941 ordered the use of lay assessors in courts hearing such cases. These assessors were selected from among school teachers, child-welfare workers and other persons active in welfare work. Beginning in 1943, the cases of children under 16 were heard in larger cities by special divisions of the people's courts. In other cities such cases were required to be heard on separate days, on which no other cases were heard. In 1943, the government ordered the exercise of special care in the appointment of judges for hearing cases of young offenders.

Spain, where juvenile courts were in operation under a law of 1918 and subsequent laws, amended and codified these laws in 1940. In Sweden, where no juvenile courts were in existence but cases of young offenders were referred either to the public child-welfare boards or to the regular courts, provision was made in 1937 for better institutional care. In 1939, 1944 and 1945, laws were enacted for the preliminary investigation of such cases and for more extensive use of medical examinations, probation and parole.

Switzerland where juvenile courts for many years were regulated by the laws of the individual cantons and, therefore, lacked uniformity, attempted to introduce uniformity through the federal penal code of 1938, which went into

effect in the entire country in 1942. This code prescribed general rules for the treatment of cases of young offenders but left the details to individual cantons. Stress was laid by the penal code on the participation of welfare agencies in the work of the juvenile courts.

Great Britain

The constructive efforts in Great Britain early in the period 1937–46 were interrupted by the outbreak of hostilities in 1939. Evacuation of expectant mothers and of children from dangerous areas, separation of families, interruption of school attendance, absence of parents from the home and other misfortunes all cast their shadows on child life. But even in the midst of war, the public authorities were able to provide most of the health services of normal times, including school medical services, childhealth clinics, public-health nursing and maternity care. In consequence, gratifying results were noted in the vital statistics reported by the chief medical officer of the ministry of health for 1939–45.

The birth rate, which was 14.8 per 1,000 living persons in 1939 and showed a slight decrease in the next two years, rose to 15.6 in 1942, 16.2 in 1943, and 17.7 in 1944. The infant mortality rate per 1,000 live births, a reputedly reliable index of health conditions, was 51 in 1939; after a rise to 57 and 60 in 1940 and 1941 respectively, it went down, despite wartime difficulties, to 51 in 1942, 49 in 1943, and 45 in 1944. The maternal mortality per 1,000

British children being evacuated from London during the height of the German robot bomb raids. As in the days of the 1940 blitz, hundreds of women and children left London for safer areas during 1944 and 1945

total births decreased gradually from 3.10 in 1939 to 2.62 in 1940, 2.47 in 1942, 2.30 in 1943 and 1.92 in 1944. These encouraging reductions were attributed to special arrangements for the nutrition of expectant mothers and of babies and to good medical care.

The nutritional state of the nation as a whole was reported not worse at the end than at the beginning of the war, despite food restrictions, and, as regards children, it was somewhat better. This was attributed to a more suitable and balanced children's diet.

Plans for more extensive health services for the entire population also continued in the midst of war. Among such plans, wide attention was attracted by the report on Social Insurance and Allied Services by Sir William Beveridge published in 1942. This report was used by the British government as a basis for a plan presented to parliament in 1944 which called for the organization of a comprehensive system of medical care available free of charge to everybody, regardless of age, sex, financial condition or occupation. Treatment was to be given for all ailments, physical or mental, and was to include surgery, dental care and nursing care. Another plan, also based on the same report, provided for the following kinds of benefits: (1) family allowances; (2) social insurance, with more liberal benefits (payable in case of unemployment, sickness, childbirth or retirement), widows' benefits (payable for short periods), widows' pensions, orphans' allowances and funeral benefits; and (3) "national assistance" for the purpose of meeting any special needs not covered by insurance benefits and the needs of all persons not qualified for such benefits.

These plans were gradually implemented by legislation. In 1945, the Family Allowances act was passed, and on Aug. 6, 1946, about 2,000,000 mothers drew the first instalment of their weekly allowances of 5s. (approximately \$1.00) for every child, except the first. These allowances were paid for children under 16, and those older if they were serving as apprentices or attending school. In July 1946, a bill providing for a free and comprehensive health service for all citizens passed its final stages in the house of commons. The National Insurance act of Aug. 1, 1946, also followed the main lines of the Beveridge proposal; it unified the existing provisions into a single system of social insurance covering the whole population and providing a single scale of benefits in all cases of lost earning power.

Among the other important measures for postwar reconstruction was the Education law of England and Wales of 1944. This law superseded all previous laws and, in particular, repealed the Education act of 1936, which was to have gone into operation on Sept. 1, 1939, but was suspended because of the outbreak of war. Under the new law, the present school-leaving age of 14 years was to be raised on April 1, 1947, to 15 years; and, subsequently, when sufficient buildings and teachers became available, to 16 years. After boys and girls had passed the age for full-time compulsory school attendance, they would be required to attend part-time county colleges at least until the age of 18, if they were employed; otherwise full time. The tuition was to be free. Under this law the employment of school children was to be prohibited or restricted.

The legislation on full-time employment of children and young persons in factories and other work in England, Wales and Scotland was revised in 1937 and 1938. A minimum age of 14 years was prescribed; a 44-hour week tor children between 14 and 16 and a 48-hour week for those between 16 and 18. Night work was prohibited tor children under 16.

The beginning of hostilities, increasing the demand for

manpower, immediately brought about longer hours of work for young persons, particularly in establishments filling emergency orders. Soon, however, the evils of this policy became apparent in a lowered production level and in increased loss of time because of sickness or fatigue. Accordingly, working hours were shortened, and the government announced that the child-labour law would be fully enforced in its application to the working hours for children and young people.

British Dominions

The world-wide recognition of the need for social security was evident also in the British Dominions. In New Zealand, the Social Security act of 1938 was amended at least twice and was being put into effect by degrees. For mothers and children, the act provided medical and hospital care, medicines and other appliances for insured persons and their dependents. Maternity care, services by specialists and dental treatment were also included. Family allowances, previously payable for the third and each subsequent child under 16, were paid also for the first two children after April 1, 1946. All these benefits were avail able to the residents of New Zealand without extra charge, except the contributions regularly required under the law.

In Australia, where a somewhat similar law was enacted in 1938 but was not put into effect because of subsequent wartime difficulties, plans were made after the war for a comprehensive system of social security. In the meantime, a law on unemployment and sickness benefits was passed in 1944, and other forms of aid were also given to parents. Among them were maternity allowances paid since 1912 in a single sum on the birth of each child and increased in 1943, when they became available to any woman regardless of income. Widows and divorced and deserted wives with one child under 16 received pensions after July 1, 1942, and all parents were entitled after 1941 to regular allowances for two or more children under 16.

In Canada, family allowances paid since July 1, 1945, for each child under 16 varied from \$5.00 to \$8.00 a month, depending on the child's age and the number of children in a family.

With further regard to child health, a permanent Commonwealth Council for National Fitness was organized in Australia in 1939, and councils on physical welfare and recreation in New Zealand in 1937 and in the Union of South Africa in 1938. National official agencies were appointed during the decade in Australia, New Zealand and the Union of South Africa to find ways of improving the nutrition of the people.

Reorganization and expansion of child-welfare services and establishment of juvenile courts were the subjects of laws in the Union of South Africa (1937), New South Wales (1939) and in some provinces of Canada, among them Quebec, and in Newfoundland (1944).

The minimum age for full-time employment was raised in 1941 in the Union of South Africa from 14 to 15 years, in compliance with the convention on that subject revised in 1937 by the International Labour conference. Closely connected with employment was the school-leaving age. Although wartime demands on manpower brought about exemptions of children from school attendance, progress was reported from some places. In New Zealand, the school-leaving age was raised in 1944 to 15 years, and employment of children of school age was prohibited during school hours. In New Brunswick, Canada, where school attendance had previously been compulsory only in a tew towns, a law of 1941 made attendance up to 14 years compulsory throughout the province and prohibited the em-

ployment of school children during school hours, with some exceptions. Two years later a 14-year minimum age was ordered there for employment in factories. In Quebec, a law effective in 1943 required children to attend school until the age of 14.

United States

Though the destructiveness of war dominated the period 1937-46, positive gains were made in child welfare. Ten years of actual operation of the Social Security act, passed in 1935, virtually coincided with the decade. The act recognized the needs of children as an integral part of a broad economic and social program by providing for aid to dependent children administered by the Social Security board (see Social Security) and for maternal and child health, crippled children and child-welfare services, administered by the children's bureau of the U.S. department of labour, later of the Social Security administration, Federal Security agency. All three of the bureau programs were to enable the states to extend and improve these services, especially in "rural areas and in areas suffering from severe economic distress" or "areas of special need." Allotments were granted on the basis of plans submitted by the states and approved by the bureau.

Amendments to the act in 1939 and 1946 increased the amounts appropriated for the grants. The increases brought annual appropriations for maternal and childhealth services to \$5,820,000 in 1939 and to \$11,000,000 in 1946; for crippled children's services to \$3,870,000 in 1939 and to \$7,500,000 in 1946; and for child-welfare services to \$1,510,000 in 1939 (an addition of \$10,000 in order to include Puerto Rico) and to \$3,500,000 in 1946. Half of the federal grants had to be matched by state or local funds in the two health services. Grants for child-welfare services did not need to be matched, although federal funds could be used for only part of the cost of local services. Federal grants, supplemented by state and local funds, were only a part of the total amounts spent for the programs.

Maternal and Child-Health Services.—One of the basic services of this program, administered by the state health agencies, was the health supervision of expectant mothers by physicians in maternity clinics, with instruction by public-health nurses and nutritionists as to hygiene and diet during pregnancy and the nursing period. Because of limited funds, state agencies did not attempt to provide care at childbirth for all mothers needing care, but a few demonstrated complete maternity care on a public-health basis, developing home and hospital delivery service with medical and nursing supervision throughout pregnancy and the postpartum period.

State agencies made wide use of another basic service—child-health conferences to protect the health of children and to prevent illness. In these clinics, physicians examined children and in reporting their findings to the mothers, recommended certain care. Public-health nurses interpreted the doctors' instructions to the mothers.

School health services received more attention after V-J day. Nutrition and dental services—the latter mostly for school children—immunization against disease, and measures for preventing congenital syphilis were carried on in many states, and some mental health programs appeared.

By the end of 1942, programs of limited extent in about half the states were providing maternity care to servicemen's wives who were having difficulty in getting medical care through their own resources. Congress made the first

special appropriation for this purpose—\$1,200,000—in March 1943 for the remainder of the fiscal year and for the next four fiscal years the following appropriations: 1943–44, \$29,700,000; 1944–45, \$45,000,000; 1945–46, \$38,049,900; and 1946–47, \$16,664,000.

The children's bureau made grants to state health agencies on the basis of plans they submitted for maternity care for wives during pregnancy, at childbirth and for six weeks thereafter, and for babies under one year of age, medical, nursing and hospital care, if needed. Eligible for care were wives and babies of men who were or had been during their wives' pregnancy or the baby's first year in the four lowest pay grades of the armed forces, or were aviation cadets. Care was given regardless of residence, family income or race.

From April 1943 through Oct. 31, 1946, care was authorized for more than 1,340,000 maternity and infant cases. The peak of the program came toward the middle of 1944, with the number of cases authorized reaching almost 47,000 in the month of June. During the year 1945 an average of about 37,000 cases a month were authorized for care. There was a marked downward trend during 1946; from Aug. 1 to Oct. 31 the average number of cases authorized was about 17,000 a month. Most of the care was authorized for wives, but there was a steady increase in the proportion of care authorized for babies; in the period Aug.—Oct., 1946, about 30% of all cases authorized were infant cases.

Services for Crippled Children.—Federal grants were authorized under the act to help state agencies extend and improve "services for locating crippled children and for providing medical, surgical, corrective and other services and care and facilities for diagnosis, hospitalization and aftercare for children who are crippled or who are suffering from conditions which lead to crippling." Although state agencies gave primary consideration during this period to children with conditions requiring orthopedic or plastic care, some developed programs for other types of physical handicaps. Twenty states developed care for children with rheumatic fever or heart disease, and a few started special services for children with cerebral palsy, impaired hearing, specific visual defects and diabetes.

More than 100,000 children, it was estimated, received services yearly during this period. During the war the shortage of medical personnel for the care of civilians, especially of orthopedic surgeons, stopped expansion of the work. The number of children admitted to clinic service during 1944 was 15% below the corresponding figure for 1941, and the number of individual children under care in hospitals during 1944 was 24% below the figure for 1941. By the autumn of 1946, however, a number of surgeons, nurses, physical therapists and medical social workers needed in the program had returned to their posts.

Child-Welfare Services.—Before passage of the Social Security act, only 26 states had in their public welfare agencies divisions responsible for providing or supervising services to children on a state-wide basis. Although nearly all states had laws giving the state some responsibility for the care and protection of children, many had no public service primarily for children on a state-wide basis except an institution for delinquent children, or, perhaps, for dependent children. After 1935, the states accepted more and more responsibilities for direction and leadership of programs affecting children, and laid a foundation on which to build a broad program of state-wide, local public social services for children.

The basis of the child-welfare program was a specialized case-work service whose achievement depended on the professional education and skill of the worker, on creative supervision of her work, and the accessibility of this worker to parents and children. In spite of the definite progress the program made during 1937–46, limitation of funds kept it relatively small. Scarcity of qualified workers for rural areas was also a handicap. As of June 30, 1945, only one specialized worker paid from federal, state or local funds was available for approximately every 25,000 children under 21 years of age throughout the country. More than half of these approximately 2,000 specialized workers were employed in 8 states having less than one-third of the child population of the United States.

Federal grants stimulated the expenditure of more state and local funds for children's services and provided the services of supervisors and consultants on state staffs who had made more effective and more equable the services received by children. The grants also made possible educational leave for workers. In addition, broader concepts of services to children permeated the state and local programs; for example, that children should receive services in their own homes early, while family conditions were improvable; that services should be available locally; that the community should organize for the welfare of all the children living there; and, during the latter years, an emphasis on the prevention of social handicapping of children and on making social services available to any child who needed them, regardless of the family's economic status. Related to the first concept was the fact that of the 187,710 children receiving case-work service in 40 states from state and local departments of welfare on Dec. 31, 1945, 44% were living with their parents or relatives, 37% in foster-family homes, and 19% in institutions or elsewhere.

U.S. Children and the War.—The children of the United States fared well during World War II compared with the children of other warring countries; but they did suffer. Many lost their fathers; many were uprooted from their homes; some got too little parental supervision; and many suffered from the housing shortage and school curtailment, and from family dislocations. Children in migrant families harvesting the hand crops in industrialized agriculture lived under almost intolerable conditions, with little help from the communities they lived in temporarily during harvesting.

Only one group of children was directly affected by military evacuation—children in the families of Japanese ancestry living in military zones 1 and 2 on the west coast, considered potential combat zones. Nearly 120,000 individuals, about two-thirds citizens and more than one-fourth children under 15 years of age, were evacuated to relocation centres in the interior by army order. It was impossible to measure the emotional injury to these second and third generation American children caused by mass uprooting from their homes and by the hostile attitudes in some relocation communities and in their old localities when they returned after the exclusion order was lifted. That nearly the whole group met the ordeal in a remarkably self-disciplined, reasonable way probably lessened for the children the destructive effect of this experience.

The congested "defense areas," concentrations of military personnel or war workers, were backgrounds for much of the danger to children and for the struggle to give them protective health and social services. About 400 local areas, involving at least 500 counties and more than 1,000 communities, were termed critical defense areas. Hun-

Nursery of a war plant in Buffalo, N.Y., where children were cared for while their mothers worked in the plant

dreds of other towns in the vicinity were affected by the overcrowding as services were stretched thin to cover increased numbers. Thousands of families lived in trailers in open fields. From these "homes" and from improvised shacks, many parents went to work, leaving their children to fend for themselves during the work shift. Schools were overcrowded; teachers were few; playgrounds scarce. Many adolescent boys and girls were living unsupervised in places to which they had gone alone for war jobs or to be near camps. Maternity and pediatric care was seriously inadequate because of overcrowding and the rapid withdrawal of physicians and nurses for the armed forces. Surveys showed that many defense areas had only 1 physician to 2,500 persons and some had only 1 to 4,000 or more in contrast to the prewar ratio for the United States of 1 to 850 persons and for the large cities as high as 1 to 400.

Responsibility for nonmilitary protection of civilians was placed with the Office of Defense Health and Welfare Services and the Office of Civilian Defense. The office of education and the children's bureau co-operated with these agencies in planning for children. Among other forces that combined to hold the lines was the children's bureau Commission on Children in Wartime appointed by the chief of the bureau early in 1942. The commission published A Children's Charter, a ten-point program for state action, suggesting legislation needed for the wartime protection of children; ten goals for children and youth in the transition from war to peace; and Building the Future for Children and Youth, a broad program of action to extend official health and social services for children. In 1944, the body became the National Commission on Children in Wartime and in 1946, the National Commission on Children and Youth.

Of significance to children was the wartime nutrition program initiated by the Office of Defense Health and Welfare Services. The National Nutrition Conference for Defense, held in Washington at the call of the president in May 1941, set the country-wide program. The rationing of scarce foods kept nutritional levels normal. Many families were able to purchase more and better food than they had in the previous decade because all employable members were able to get work. Price control and rationing of scarce foods helped to ensure a fair distribution of the national food supply. After controls were relaxed, beginning in July 1946, many homemakers found it more difficult to feed their families satisfactorily.

The school lunch program, started in 1935 as a depression measure, was continued as a wartime need. In June 1946, the National School Lunch act made the program permanent through grants to the states to establish and operate nonprofit school-lunch programs. The department of agriculture was designated to administer the grants, for which congress appropriated \$75,000,000 for 1946–47.

Juvenile Delinquency.—The exact amount of juvenile delinquency in the United States was not known—there were no statistics that measured its extent. Nevertheless, it was popularly believed during the war that delinquency was increasing, especially in congested areas that exposed children to unusual stress. It was true that young people were quick to feel the excitement and restlessness of wartime, but those who could be called "delinquent" or who had court experience were a small minority; most boys and girls behaved admirably.

The juvenile-court statistics of the U.S. children's bureau, reported by about 400 courts in a series begun in 1927, threw light on the question of trend. The reports of 76 courts in urban areas showed an increase of 65% in delinquency cases disposed of by these courts from 1938 to 1945. The year-to-year increase was greatest in 1943. A relatively larger increase was shown in girls' cases disposed of (76%) than in boys' cases (63%), although girls' cases continued to be only one-fifth of the total.

The 1945 data in the bureau's series, from 374 courts serving areas with about 37% of the country's population, showed 122,851 delinquency cases disposed of. Of this

total, 82% were boys' and 18%, girls' cases. The greatest concentration was in the 14- and 15-year old group—36% of the boys' cases and 43% of the girls' for which the age of the child was reported. Of the 374 courts reporting on delinquency cases disposed of in 1945, 364 reported also in 1944. The total number of delinquency cases disposed of in 1945 by these 364 courts was 6% higher than in 1944.

The children's bureau revised its reporting plan, effective Jan. 1946, with the purpose of improving the national collection of juvenile-court statistics. The bureau discontinued the direct collection of reports from individual courts in favour of state summary reports. The revision also made possible an unduplicated count of children whose cases were disposed of, officially or unofficially, by the courts in cases of dependency, neglect and special proceedings as well as of delinquency.

Among the efforts of the children's bureau to prevent wartime delinquency were: a study of the effect of war conditions on the behaviour of children and young people in ten congested areas, made during 1943 in order to plan ways of helping boys and girls; a demonstration project in a war-expanded city; co-operation with the International Association of Chiefs of Police, the National Sheriffs' association, and the Division of Social Protection of the Office of Community War Services in considering development of special training of police for work with juveniles and of closer working relationships between police and other local agencies dealing with children; and intensified work for clearing up the inexcusable conditions under which many children were being detained.

The National Commission on Children in Wartime devoted its 1943 meeting to the problem of delinquency. On its request the children's bureau issued a publication, Controlling Juvenile Delinquency, widely used as a guide for strengthening the services fighting delinquency.

The attorney general of the United States called a National Conference for the Prevention and Control of Juvenile Delinquency in Washington in Nov. 1946. About 800 representatives of voluntary and official agencies working in this field met in a working conference aimed to stimulate local communities to improve and intensify their work against the causes of delinquency. The reports of the 16 panels on various phases of prevention were designed to be specific guides to agencies and communities in planning a harder attack.

The developing state and local commissions—voluntary and public—on the problems of children and youth worked to channel into constructive efforts the public interest expressed in preventing delinquency. One way these planning groups could help was to evaluate the proposed local methods of prevention and treatment so that energy, time and funds would not be wasted on unsound plans such as punishing rather than helping parents of delinquent children.

Day Care of Working Mothers' Children.—The day care of children expanded greatly during 1937–46 and acquired new users and new sponsorship. The long-established, progressive voluntary day nurseries were unprepared for the wartime demand for their services but formed the pattern for good war centres. Though the majority of mothers made their own arrangements for their children, great numbers could not find places even though they could afford the cost.

The bureau of the census in Feb. 1944 gathered additional data on the employment, marital status and children of women workers. The resulting estimates indicated that

of 16,630,000 women in the labour force, some 2,770,000 had children under 14 years of age. Among women workers in the age groups 25 to 34 and 35 to 44 years, one in every three or four had at least one child under 14. The total number of children under 14 whose mothers were in the labour force was estimated at 4,460,000. Especially serious was the problem of some 750,000 children under 14 whose mothers were employed and whose fathers were away from home. Though the War Manpower commission stated in Jan. 1943 that women with young children should not be recruited until all other sources of labour had been used, many young mothers were sought out by industry because of their skills and work experience.

In most child-care programs, emphasis was placed on the care of preschool children over two years of age and on suitable recreation programs for older children after school hours. If qualified staffs were available, day care included the activities of a nursery school. The best programs gave case-work services, including consultation with mothers before they placed their children and afterward, if problems arose.

Early in 1941 it became clear that federal funds would be necessary to assist the overburdened mushroomed communities. The nursery-school program of the Work Projects administration received funds to reorganize and expand, and gave day-care service until WPA's end in Dec. 1942.

Meanwhile, in June 1941, the Community Facilities act ("Lanham" act) was passed which made federal funds, allotted by the Federal Works agency, available to defense areas for construction, maintenance and operation of group day-care centres, in addition to other facilities. These grants to local school districts and, in fewer instances, to local public welfare departments were made on the basis of war-created need. Applications for funds were certified by the office of education or the children's bureau.

In Aug. 1942 the president granted \$400,000 from his emergency fund to be made available through the Office of Defense Health and Welfare Services (later the Office of Community War Services, Federal Security agency). This money was granted to the states on the basis of plans for day-care services submitted for approval by state departments of welfare to the children's bureau and by state departments of education to the U.S. office of education. The funds were exhausted by the end of June 1943.

The Federal Works agency was the chief source of funds after June 1943. At the height of the child-care program, July 1944, the program thus financed was serving nearly 130,000 children in more than 3,100 centres. By July 1945, the enrolment had dropped to about 102,000 in nearly 2,800 centres. On Feb. 28, 1946, when federal assistance stopped, the number of centres, or units, was 1,479. These were located in 386 communities, in all but 2 states.

With the announcement in Aug. 1945 that federal support of the centres would be withdrawn in October, many communities tried to find local support and were allowed until March 1 to make their arrangements. Many cities and towns were successful; more than three-fourths of the centres continued to function.

Research.—The White House Conference on Children in a Democracy, the fourth of a series beginning in 1909, met in Jan. 1940 and issued a wealth of factual material on the life and growth of the United States in relation to its children. The reports discussed economic factors affecting the well-being of children, and the various services, public and voluntary, that the people had built up for bettering the lives of children.

During the decade 1937-46, studies were made in child

welfare by national voluntary agencies and, among federal agencies, especially by the U.S. children's bureau, which had been charged by congress to investigate and report on all matters pertaining to the welfare of children. The bureau's research fell into its three main fields of activities, maternal and child health, social service and child labour. When war came, appropriations for research and administration were reduced. Long-time research projects were wound up or suspended, and only brief surveys were made in planning wartime services. A few of the research projects of 1937–46 illustrate the aspects of child life studied.

In child health, studies were made on the care of premature infants, yielding important new information on their physiology, circulatory and respiratory difficulties, feeding, and growth, development and health. Other studies were on factors affecting neonatal mortality, including studies on the birth weight of infants; osseous development of infants; physical fitness of school children; rickets and scurvy in children who died from various diseases; and on mortality from accidents—the first of a series of statistical studies on childhood death from various causes.

Federal agencies sponsoring or administering programs for school children studied measures to meet school health needs. The children's bureau, office of education and public health service issued a statement on the health needs of school-age children and recommendations for its implementation.

The American Academy of Pediatrics invited the children's bureau and the public health service to join it in a study to determine the personnel and facilities necessary to make available to all mothers and children preventive, diagnostic and curative medical services, adequate in amount and quality.

When the bureau of the census issued data on births and deaths in 1943, the children's bureau could compare infant and maternal mortality rates over a 10-year period for the United States as a whole because in 1933 satisfactory data were available for every state for the first time. The study showed that from 1933 to 1943 the birth rate increased 30%. For 1933, 2,081,232 live births were registered—a birth rate of 16.6 per 1,000 estimated population. For 1943, 2,934,860 live births were registered—a birth rate of 21.5 per 1,000 estimated population, including the armed forces overseas, the highest rate in almost two decades.

The reduction of maternal mortality was dramatic. In 1933, 12,885 women died from causes directly resulting from pregnancy and childbirth; in 1943, this number had dropped to 7,197. The risk of dying from these causes was actually reduced more than was indicated by the difference between these figures, because there were more than 800,000 more live births in 1943 than in 1933. The number of puerperal deaths per 10,000 live births declined from 62 in 1933 to 25 in 1943—a reduction of 60%.

In 1933, a total of 120,887 infants died before their first birthday. In 1943, the number dropped to 118,484 in spite of the increased number of infants born in the later year. The infant mortality rate dropped from 58.1 to 40.4 per 1,000 live births—a percentage change of 30.5.

The birth rate declined from 21.5 per 1,000 estimated population in 1943 to 20.2 in 1944. The maternal mortality rate declined from 24.5 per 10,000 live births in 1943 to 22.8 in 1944; the infant mortality rate declined from 40.4 per 1,000 live births in 1943 to 39.8 in 1944.

Research in social services for children included a demonstration in St. Paul, Minn., carried on from 1937 to 1943 to develop experience in the early identification of behaviour problems of children and in the co-ordination of

services for children, applicable in any urban area. The project gave services, stimulated and took part in activities, and stressed the correlation of health, education, law enforcement, recreation and case-work services.

In 1945, congress appropriated funds to the children's bureau for a study of the legal guardianship of children, which was in full swing during 1946. The bureau also studied changes during 1933–43 in the volume of foster care of children given by public and voluntary agencies. The most telling quantitative changes were increases in the number of children cared for by public as compared with voluntary agencies and cared for in foster family homes as compared with institutions.

Advisory Services.—Advisory service was given in all fields of children's bureau work on the basis of its research and to the states in the administration of its grants. A mental health unit was added to the staff in 1944 with the aim, in general, of furthering the integration of mental-health concepts in all social and health services for children, and promoting the development of child-guidance and other mental-health services. A consultant on dental services joined the staff in 1945.

Services for children in minority groups included the reorganization of the department of pediatrics of a medical school for Negroes and the development of child-health services in a large community centre for Negroes. In social service, the bureau gave intensive consultation to cities in the west on the integration into community life of the children in Negro families recruited from the south for war work, in addition to its regular advisory services on the problems of Negro children.

Standards.—Much of the bureau's effort was devoted to developing standards based on previous research. Its publication, A Maternity Policy for Industry, was widely used during the war. The bureau and the public health service prepared standard plans for maternity wards and nurseries for new-born infants in hospital construction. Standards and Recommendations for Hospital Care of Maternity Patients was published in 1946.

In the field of social service, the bureau worked on standards for state adoption laws that would protect the child, the natural parents and the adoptive parents. Criteria for detention care were drawn up in 1946. A demonstration program for the prevention of juvenile delinquency, sponsored jointly by the bureau of public assistance, the children's bureau, and the state department of welfare was held during the war in a congested shipbuilding city. It was a test of what could be accomplished by a co-ordination of agencies, none of which was responsible for this type of work.

Child Labour.—The volume of child labour in the United States rose from a very low point to the highest the country had known for three decades. Progress was made, at the same time, in both federal and state legislation. In 1937 there was no federal regulation of child labour. Two laws passed previously by congress to control child labour directly and a third indirectly, had been declared unconstitutional by the United States supreme court, the third as late as 1935. In 1938, however, congress passed the Fair Labor Standards act which in 1941 the supreme court unanimously sustained as constitutional.

The child-labour provisions of the act set a basic 16-year minimum age for employment of children in establishments producing goods for interstate and foreign commerce. Exceptions permitted children of 14 and 15 to be employed in nonmining and nonmanufacturing occupa-

tions by their parents or under conditions that did not interfere with their health, schooling or well-being.

The act further provided that boys and girls under 18 might not be employed in any occupations declared and specified by the act to be particularly hazardous or detrimental to their health or well-being. An order issued after determination of a special hazard, had the effect of setting an 18-year minimum age for the occupation covered. Before the war, six orders were issued, relating to occupations in the manufacture of explosives, driving or helping on motor vehicles, occupations in coal mining, in logging and sawmilling, and in the operation of power-driven woodworking machines, and occupations involving exposure to radio-active substances. The seventh order was issued in July 1946, effective in September, relating to occupations involved in the operation of power-driven hoisting apparatus.

The child-labour provisions of the Fair Labor Standards act were originally administered by the children's bureau of the U.S. department of labour. On July 16, 1946, however, under the president's Reorganization Plan No. 2, the bureau, with the exception of its industrial division, was transferred to the Federal Security agency. This division remained in the department of labour as the child labour and youth employment branch of the division of labour standards, continuing to administer the child-labour provisions of the act. Certain duties of the chief of the bureau under the act were transferred to the secretary of labour.

From 1930 until the outbreak of World War II, the figures available indicated a continuing decrease in the employment of children in the United States, caused in part by unemployment and in part by restrictive legislation and a tendency to lengthen the period of schooling. The war years radically changed the picture of child labour and youth employment. The 1940 census showed fewer than 1,000,000 young persons 14 through 17 years of age at work. The number of workers rose to the neighbourhood of 3,000,000 in some school months during the war period. Of these, about half had left school and were working full time; about half were working and attending school as well. In the summer peak of each of the 3 years, the number of employed youth rose to between 4,500,000 and 5,000,000. In addition, many thousands of children under 14, for whom no official count existed, were employed either full time or part time during the war.

A decrease in the number of minors 14 through 17 years of age at work took place in the period after V-J day, although not to the degree that many had anticipated, especially in the first few months. As late as Nov. 1945, unpublished estimates by the bureau of the census showed that approximately 2,500,000 boys and girls of these ages were working either full time or part time. Data from other sources indicated that in the early summer of 1946 the employment of young workers was continuing to decrease in comparison with the wartime years. It was still much higher, however, than at the time of the 1940 census.

During the war, the increase in child labour reversed the upward trend in high-school enrolment. The number of students enrolled in the school year 1940–41, according to the U.S. office of education, had reached a total of 7,224,000, or 75% of the boys and girls of high-school age. This was an increase of nearly 5,000,000 since 1920, when only 32% were enrolled. By the school year 1944–45, approximately 1,250,000 fewer boys and girls were enrolled in high school than in 1940-41. The downward trend apparently was checked before V-J day, and in 1945–46,

enrolments again began to climb slowly; but far too many boys and girls were still at work instead of in school.

Efforts to uphold standards in the employment of youth under 18 years of age not customarily used as a source of labour were embodied in statements of policy on the part of the federal agencies responsible for the protection of youth from harmful employment and from the curtailment of their education, and agencies responsible for the effective distribution of the nation's manpower. Three statements of principle were issued, the first in March 1942 on the recruitment of young workers for wartime agriculture; the second in Jan. 1943, issued by the War Manpower commission; and the third in Sept. 1943 on the nonagricultural employment of youth under 18 still in school. The principles were that the employment of young people should be developed with full regard to laws on child labour and school attendance, to sound educational policies and to safeguards to health and well-being. Later the war and navy departments and army air forces established standards for their young civilian employees that were substantially in accord with these policies.

At the peak of the depression of the 1930s, many children were on the move with their families who were searching for work in industrialized agriculture—the children earners themselves when work was found. But even this large number of migrant farm families increased when World War II came, and through 1946. Very often this work was as unsuitable for children as factory work, from which they had been generally safeguarded.

Child farm workers were given little protection by federal or state laws. Two federal laws enacted during 1937-46 protected them to a limited extent only—the Sugar act of 1937 and the Fair Labor Standards act of 1938. The basic minimum age established by the latter act applied only on the days and during the hours when children were required to attend school, by widely varying state school-attendance laws.

Thousands of local children also worked on hand crops at seasonal peaks, but most of them were older children and were working when schools were closed. Many city children worked on farms during summer vacations. Voluntary standards issued for their working and living conditions and safety in transportation were observed well in some places, badly in others and ignored in many.

Other American Republics

The activities on behalf of children in the other American republics were noticeably restricted as a consequence of World War II. Nevertheless, the progressive trends which had begun before 1937 continued during the decade. One of these trends was toward securing greater effectiveness in the child-welfare services in the individual countries by co-ordinating them in each country under a single government agency of national scope. Such agencies were established and put into operation during the decade in Argentina, Brazil, Chile, Mexico, Peru and Venezuela.

In Argentina, the Bureau of Maternal and Child Welfare began to function in the national department of health in 1937. The authority of the bureau extended to the city of Buenos Aires, the federal territories and to those provinces with which the bureau had made agreements for co-operation.

The bureau maintained health centres and dental clinics for mothers and children in Buenos Aires and other parts of the country. It also operated a mobile-dental clinic which visited kindergartens and children's institutions and gave free examinations and treatment to children. The bureau made studies of the birth rate, infant mortality rate, and of the living conditions of preschool children. Much attention was given to the needs of rural localities.

Health education was conducted by the bureau over the radio and through specially prepared motion pictures, posters and leaflets. Social workers were employed to visit the mothers and advise them in the proper care of their children and homes.

In Brazil, several efforts to organize a national public agency were followed by the creation of the national children's bureau in 1940. The bureau was assigned the duties of stimulating and directing the organization of health and social services for mothers and children. It organized many "Maternal and Child Welfare Associations" of groups of private citizens; with money collected among private persons and with subsidies from the bureau, these associations set up prenatal clinics, child-health centres and other facilities. Their work was under the control of the children's bureau. In 1945, there were 1,000 such associations in Brazil.

The bureau distributed federal appropriations for the construction and maintenance of maternity homes, prenatal clinics, child-health centres, day nurseries and other health services. It maintained training courses for the physicians and other persons on its staff. Standards were published for various health services for mothers and children.

In Chile, the National Bureau for the Welfare of Children and Youth was organized in 1942 to supervise the work of prenatal clinics, maternity homes, health centres for the examination of well children, dental and other special clinics, children's hospitals and institutions for dependent and problem children, etc. Some of these facilities were established by the national bureau itself; for example, several dental clinics for expectant mothers and for children, and clinics for the treatment of tuberculosis and diseases of the heart, skin, eye, ear, nose and throat in children. Public-health nurses and social workers were employed by the bureau to visit the mothers at home.

In Mexico, after several attempts at co-ordination, the Bureau of Child Health and Welfare was set up in 1944. It undertook supervision of the work of prenatal clinics, maternity homes, child-health centres, day-care centres and others. Some of these facilities were established by the bureau; all received their total or partial support from government appropriations.

Expectant mothers and all children received free medical examinations, bacteriological tests and in some cases medical and dental treatment. Special attention was given to the detection of syphilis and tuberculosis. Immunization work was done, and instruction in child care was given to mothers. A mental hygiene clinic, mobile medical-dental clinic, maternity hospital and several day-care centres were established by the bureau. Public-health nurses and social workers were employed by many of the services. Committees of volunteers helped the bureau by collecting funds for the establishment and maintenance of health services for children.

The bureau also had general supervision over the numerous mothers' clubs which provided for their members instruction in simple trades, in the care of their health and in home management. Other work included publication of material for use by physicians and other persons engaged in work for mothers and children; issuance of regulations for subordinate agencies; drafting of laws for the regulation of health services; and planning for improvement in the situation of dependent and neglected children.

In Peru, the centralized Bureau for the Protection of Mothers and Children was created at the end of 1945. This bureau was active in the prevention of diseases of childhood, and it provided childbirth attendance by trained midwives, economic aid to mothers and medical care to mothers and to children. It also conducted education in child care. All this work was done by the bureau through prenatal clinics, lunch rooms for mothers, stationary and mobile child-health centres and clinics for children, day nurseries and vacation camps for children. The bureau also maintained a nutrition clinic, a child-guidance clinic and a school for mothers. Social services were available. Most of these facilities, however, were concentrated in a few larger cities.

In Venezuela, the Bureau of Maternal and Child Health, organized in 1936-37, became in 1942 the Bureau of Health for Mothers, Young Children and School Children. Laying stress on the needs of the rural population, the bureau announced as its chief task the reduction of maternal and infant mortality. It established prenatal clinics, children's clinics at which preventive and curative treatment was given, day nurseries and kindergartens. Midwives were employed to attend women unable to pay the cost of the service. Public-health nurses visited women in their homes and instructed them in health measures.

Outside the capital, health work for the general population was done by public-health units. These units sent out midwives to attend women at childbirth in their homes and give preventive and curative treatment to expectant mothers and to children.

In several other countries a similar approach was made toward centralizing the services for mothers and children, but with limited results. In Bolivia, the Board of Child Welfare was created by a decree of 1937 for the supervision of public and private welfare work and for related tasks. In Colombia, the Bureau of Maternal and Child Welfare was established in 1939 for directing health and social work for mothers and children. In the Dominican Republic, the National Board of Maternal and Child Welfare was created in 1940.

In Uruguay, where child health and social services were co-ordinated in 1934 in the Council of The Child, effective work was continued during the decade 1937–46. The council had charge of all matters relating to prenatal and maternity care for women of small means and to health and social welfare of children from low-income families. It supported and controlled prenatal clinics, clinics for children, day nurseries, institutions for children and other facilities. In 1935, it introduced financial aid to mothers as a means of preventing separation of mother and child, also a system of supervised foster-home care for children under 14.

School Attendance and Employment.—School attendance had been required by law for many years in almost all American republics. In some of these countries the laws were amended in the course of the decade 1937–46: in Ecuador in 1938; Guatemala, 1937; Haiti, 1942; Mexico and Panamá, 1941; Peru, 1941 and 1943; Venezuela, 1940.

The school-attendance laws required the parents to send their children to school usually at the age of six or seven years, and for a definite period of time, varying in the different countries from four to seven years. In some countries a child was exempt from school attendance if there was no school within a specified distance. Some of the new laws, for example, those of Guatemala, Mexico, Panamá and Peru prescribed a census of children of school

age and imposed penalties on parents failing to send their children to school. But despite these efforts many children were reported to be left out of school. This was often attributed to the lack of schools and the poverty of the people.

The school children's health received increased attention during the decade. In some countries physical examinations were given to school entrants and periodically to all children in primary schools in the larger cities. Stress was laid on the checking of tuberculosis and other communicable diseases; free treatment was given for some diseases.

Dental services, mostly free of charge, were introduced during the decade, in some of the cities of Argentina, Colombia, Costa Rica, Cuba, the Dominican Republic, Ecuador, Mexico, Peru and other countries.

School lunches and vacation camps for children from low-income families also became part of the school health services; they were maintained either by public agencies or by private organizations.

Child labour in a number of the Latin American countries had been regulated by law prior to 1937. After that date Argentina, Brazil, Costa Rica, Ecuador, Panamá and Venezuela amended their previous legislation, and Bolivia and Nicaragua enacted laws for the first time.

The minimum age for entering full-time employment in these countries was 12 or 14 years, with some exemptions. The working hours allowed by law for children under 18 varied from 5 to 8. Night work was prohibited, also hazardous and physically or morally harmful work. Work cards were required in some countries.

Juvenile Courts.—In addition to the laws on juvenile courts which existed in several Latin American republics prior to 1937, such laws were enacted in the Dominican Republic in 1941; Ecuador, 1938; Guatemala, 1937; and Venezuela, 1939. In Argentina, where a law of 1919 applied only to Buenos Aires and the federal territories, juvenile courts were established after 1937 in several provinces, among them Buenos Aires, Mendoza and Santa Fe. In Mexico, previous legislation was amended and codified in, 1941.

Social Insurance.—A steady expansion of social insurance, including health and maternity insurance, took place. During the decade, laws on this subject were enacted in Costa Rica, Guatemala, Mexico, Panamá, Paraguay, Peru and Venezuela. Medical care for dependents, in addition to that for the insured persons, was authorized by these laws.

The social-insurance organizations in some countries attached great importance to the protection of mothers and children in the insured groups. This was particularly true of Chile, where a Division of the Mother and Child had been operating within the insurance system since 1937. Under the auspices of this division, expectant mothers were examined by physicians and nurses, attendance at child-birth was provided and children were kept under regular medical supervision until the age of two years. Special attention was given to the treatment of congenital syphilis and tuberculosis.

Also in connection with social insurance, a law was passed in Chile in 1938 requiring annual examinations of all insured persons, including young workers, for the purpose of early discovery of illness and prevention of disability. A somewhat similar law was passed in Argentina in 1944.

Maternity insurance, which, as a rule, remained a part

of health insurance, was introduced without such insurance in Argentina and Cuba in 1934, but began to operate in 1937. The laws of both countries were amended in 1942. Under these laws, maternity insurance was made compulsory for women of childbearing age employed in most occupations, and in Cuba also for employed men, who were required to insure their wives. In Cuba, every woman insured in her own right received full wages for six weeks after confinement; her employment during that time was prohibited by law. She was also attended at childbirth by a physician or midwifé. The wife of an insured man received a cash benefit or hospital care at childbirth.

The law of Argentina was in general similar to that of Cuba.

Inter-American Activities.—The years 1937–46 witnessed the development of inter-American co-operation in the field of child welfare. An important factor in this work was the American International Institute for the Protection of Childhood. This institute was founded in Montevideo, Uruguay, in 1927, to serve as a centre of study, information and advice on all matters pertaining to the welfare of children in the Americas.

The membership of the institute gradually increased to 18 of the 21 American republics, among them the United States. Each member country was required to pay annual dues

The activities of the institute were governed by an international council of representatives of the member countries and by a director, assisted by an office staff. In 1944 the council decided in favour of setting up in the institute departments of child health, education and labour, for the purpose of guiding the work done along these lines in the American republics. In 1944–45 the institute made a study, by means of questionnaires, of rheumatic fever and rheumatic heart disease in children in the American countries. It continued the publication of its quarterly bulletin on child-welfare developments, and in 1942 began to publish a news summary several times a year.

Plans were made for expanding the work of the institute and for securing closer co-ordination with the work of the Pan American Child congresses.1 Other meetings of representatives of the American republics were held for the promotion of joint welfare interests. In spite of wartime difficulties, the First Inter-American Conference on Social Security met in Santiago, Chile, in 1942, and recommended, among other subjects, the establishment of welfare services for mothers and children within the framework of social insurance. The First Inter-American Congress on Social Service, held in Santiago, Chile in 1945. discussed social services for children. The Inter-American Conference on Problems of War and Peace held in Mexico City in 1945 recommended that all the American repullics give full support to the American International Institute for the Protection of Childhood and to other inter-American organizations working for social welfare.

Inter-American co-operation also gained official approval from the United States government. In 1939 the congress authorized participation by the United States in co-operative public health and welfare work in the American republics and it later made grants for that purpose.

As part of this program of co-operation, the United States children's bureau furnished consultation services, on request of the respective governments, to official agencies concerned with health and welfare of children in Bolivia, Brazil, Chile, Colombia, Costa Rica, the Domini-

The following Pan American Child congresses were held: Buenos Aires, Argentina, 1916; Rio de Janeiro, Brazil, 1919; Montevideo, Uruguay, 1922; Santuago, Chile, 1924; Havana, Cuba, 1927; Lima, Peru, 1930; Mexico City, Mexico, 1935; and Washington, D.C., 1942.

can Republic, Ecuador, Guatemala, Mexico, Paraguay, Peru and Uruguay. For this purpose professional workers were sent to the above countries. Training grants were given to students from other American republics for professional study and observation in schools of social work and other institutions in the United States. Chile

Chile, a republic fronting on the south Pacific coast of South America for about 2,600 mi., has an average width of only 110 mi. The area had never been accurately measured, but the official estimate was 290,085 sq.mi.; figures cited with good authority in other sources were 286,-322 and 286,396 sq.mi. Pop. (official est., Jan. 1, 1944), 5,237,432. Population by the 1940 census was 5,023,539; the official estimate in 1943 was 5,229,367. The population is predominantly white, with some mingling of Indian strains gradually becoming obliterated; the mestizo element in 1946 formed no more than 15% of the total, and Indians comprised about 5%. Capital and principal city: Santiago (pop., including suburbs, 1940 census, 943,669). Other important cities, with 1940 census pop.: Valparaíso, the chief port (212,072), Concepción (85,938), Viña del Mar, a popular seaside resort (1940 est. 70,013), Talca (45,-462), Antofagasta (50,244), Chillán (39,909), Temuco (39,-217), Iquique (37,713), Talcahuano (30,082), Valdivia (34,-600), Lota (31,087), Rancagua (21,621), Punta Arenas (29,-784), Osorno (25,075), La Serena (21,383), Puerto Montt (21,552), Curicó (19,532), Los Angeles (commune 52,259) and San Bernardo (commune 30,345).

The constitution of 1925 established a unitary government headed by a president elected by direct, popular vote for a six-year term and ineligible to succeed himself immediately; the congress to include a senate of 45 members, and a chamber of deputies of 147 members elected on a population basis. Presidents during the decade 1937–46: Arturo Alessandri y Palma (1932–Dec. 24, 1938); Pedro Aguirre Cerda (Dec. 24, 1938–Nov. 25, 1941); Jerónimo Méndez (Nov. 25, 1941–April 2, 1942); Juan Antonio Ríos Morales (April 2, 1942–June 27, 1946); Alfredo Duhalde (became acting president, Jan. 17, 1946), (June 27, 1946–Aug. 3, 1946); Vice-Adm. Vicente Bielich, beginning with the latter date.

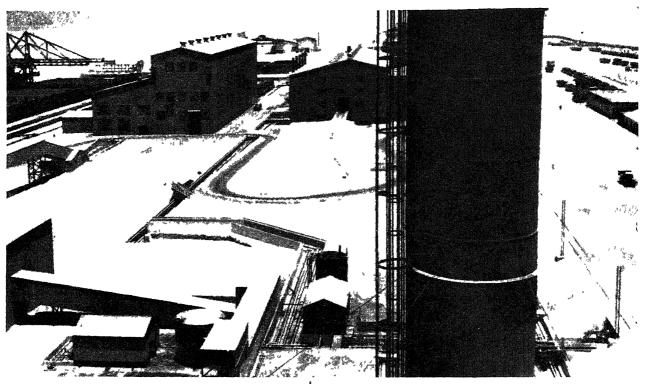

Political Ferment.-The year 1937 opened with a highly

confused political situation. President Arturo Alessandri, who during his first term as president (1920-25) had been a spokesman of liberal elements, had become increasingly conservative. In 1936 he had attempted to detach the Radical party (Chile's strongest single political group) from the newly organized Popular Front—the first genuine popular front movement in any Latin-American statewith an offer of three cabinet posts, but the party refused unless other leftist parties were also given recognition. This refusal, coupled with conflicts between Socialist and nazi groups and with demands for the resignation of the finance minister, led Alessandri late in the year to ask for dictatorial powers on the pretext of suppressing communism: Conservatives and Liberals (the latter also a conservative group) supported the president in the congress and provided a majority of the cabinet. The Popular Front formed the opposition, although some Radicals favoured co-operation with the president. The congressional elections of March 8, 1937, were held without serious disorder, and resulted in a general victory for the government parties, although three nazis and seven Communists won seats.

Political tranquillity did not follow the elections, as was hoped. Gustavo Ross, foreign minister and minister of finance and an outstanding leader of the rightist groups, resigned his posts two days after the elections, ostensibly because of Alessandri's refusal to force resignations of leftist cabinet members, but also because of growing popular resentment against him because of increasing food prices, for which he was held responsible. Ross, one of the wealthiest men in Chile, had been supervisor of Chilean finances for four years, during which time he had balanced the budget and accomplished other reforms, but his policy of encouraging exports to the United States led him to be accused of favouring the agriculturists and capitalists and sacrificing the interests of labour. The government adopted various measures to lower prices in the face of a serious food shortage.

Increased activity by Chilean nazis (Nacistas) became of serious concern to the government by May 1937. When tear gas bombs were thrown at Alessandri on May 21, many nazis were arrested in consequence; frequent clashes with police occurred thereafter during the year. The minister of the interior, in order to meet the nazi threat, banned all mass meetings and the wearing of uniforms and insignia indicating group affiliation.

In the field of foreign affairs, Chile negotiated an important treaty with Bolivia in Aug. 1937, after months of conferences between economic experts of both countries. The treaty provided for a Bolivian customs house at Arica in northern Chile and unrestricted Bolivian importation through Chilean territory, a most-favoured-nation provision plus agreement for the establishment of permanent trade commissions for the two countries and elaborate plans for stimulation of cultural exchanges. Considerable alarm was aroused in Chile in June by publication of an article in the newspaper Aurora which charged that Argentina was ambitious to seize Chilean territory; the assertion was based on Argentine activities in the far south, in the vicinity of Tierra del Fuego and Magallanes, and referred to increased Argentine military preparations, colonization efforts in Patagonia, military manoeuvres near the Chilean frontier and the visit of Argentine livestock experts to frontier districts. Foreign observers speculated that the article might have been inspired by the government's desire to win popular support for its program for develop-

ment of the army, navy and air force. Chilean concern over the growing obsolescence of its navy had been aroused earlier by the visit of the Argentine fleet in May; following the *Aurora* article, the government exerted itself to improve the national defense, especially by making a heavy outlay for rapid naval improvement and for the purchase of military aeroplanes.

The year 1938 was dominated by the presidential campaign and election. Chilean parties fell into two groups, roughly the Right and Left, the latter commonly referred to as the Popular Front. Alessandri threw his support to Gustavo Ross; the choice of the Popular Front was Pedro Aguirre Cerda, a millionaire landowner but a political moderate. Col. Marmaduque Grove, a former provisional president and a fiery Socialist leader, had been the original Popular Front choice. The Nacistas, led by a young man of part German ancestry, Jorge González von Marées, proved embarrassing to the government from the beginning of the year. González von Marées, a deputy, created a sensation at the opening of the congress in May by firing a pistol shot during Alessandri's address; a bomb was exploded in the congressional gardens. González was arrested, but released. A more sensational climax came Sept. 5, when several score Nacistas seized a large public building and were subdued only after 4 hours of vigorous fighting, leaving 62 dead. Alessandri and Ross had both apparently been marked for assassination. The president was given extraordinary powers, which were lifted in part for the closing days of the campaign. González von Marées and other Nacista leaders, and former President Carlos Ibáñez, who was closely associated with the Nacistas, were arrested. González was sentenced to 20 years' imprisonment, but Ibáñez was released just before the election and

Aguirre's Administration.—The election campaign progressed with high feeling. More than most Latin-American elections, it was a contest between liberalism and conservatism. Most political observers picked Ross, who had strong government support, to win, but the final vote favoured

Chilean nitrate mill, where the nation's second largest item of export is manufactured. Disposition of artificial nitrate plants built in the U.S. to supply wartime needs for fertilizer and explosives became a matter of critical interest in the postwar economy of Chile

Aguirre with a margin of 4,111 out of 443,525 votes cast. Ross asked for a recount but later conceded the election and left for a trip abroad. Aguirre Cerda was inaugurated Dec. 24. His first official act was to pardon González von Marées, presumably for the support that the Nacistas had thrown to the Popular Front ticket late in the campaign. Ibáñez returned to Santiago Dec. 31 and was welcomed by uniformed Nacistas.

Throughout 1939, the Aguirre Cerda administration faced opposition to its legislative program even from some of the component parties of the Popular Front as well as from conservative elements. Santiago retail bakers demonstrated on Jan. 13 against the government cut in bread prices. Government victories in by-elections the same month demonstrated popular support for its program, however. Army officers were in April forbidden to join or support political groups. The Popular Socialist Vanguard (the renovated Nacistas or Chilean nazis) and a new fusion party under Ibáñez announced support of the government in April. In May 1939, the government revealed an alleged plot to overthrow it through a boycott; in Aug. occurred an unsuccessful coup led by Gen. Ariosto Herrera and Carlos Ibáñez, who had been considered a government adherent. Political feeling continued to run high throughout the year, and when former President Alessandri, an opponent of Aguirre Cerda, returned in Dec. from an absence of some months in Europe he was threatened by a mob in Antofagasta. The government's constructive program was seriously interrupted by the disastrous earthquake of Jan. 24, 1939, and by domestic political opposition, so that the greatest specific achievements were in improved housing.

An important dispute arose between Chile and Spain early in 1939 over the right of asylum in the Chilean legation in Madrid, a right the Franco government sought to deny with regard to Spanish Republicans who had taken refuge there; Spain tacitly conceded the Chilean contention in Oct., however.

Chile promptly declared its neutrality in World War II and participated in the first inter-American foreign ministers' conference at Panamá in Sept.—Oct.

Anti-Communist feeling increased during 1940, and the chamber of deputies in Nov. approved legislation outlawing the party; Socialist party leaders strongly attacked the Communists the following month. Minister of Development Oscar Schnake, who had just returned from several months in the United States, and Marmaduque Grove, both prominent Socialist leaders, urged a Pan-American front against all totalitarian ideologies. Aguirre congratulated Schnake, but other leaders defended the Communists as loyal members of the Popular Front. Fifth column activities received wide attention, both in Chile and abroad, and it was charged that from \$50,000 to \$100,000 monthly was being spent on nazi propaganda. Many Chileans were alarmed over German land ownership along the border in southern Chile, but the Socialist party protested a government decree of Aug. 17 empowering the police to deal with "professional agitators." The Popular Vanguard and other agitator groups were especially active late in 1940.

On July 17, 1940, just before the opening of the second inter-American foreign ministers' conference at Havana, Spain suddenly broke diplomatic relations with Chile. Brazil handled Chilean interests in Spain until, on Oct. 12, the latter government made a unilateral announcement of resumption of relations. Chile rejected German protests against continued Chilean recognition of Polish, Danish and Norwegian representatives at Santiago.

Chile generally remained rigorously neutral and at the Havana conference condemned the proposal for "provisional administration" over European possessions in the new world as "premature." Relations with the United States were generally quite friendly, however. The Chilean senate on May 15 passed a resolution condemning invasion of neutral countries.

The political scene was marked by uncertainties throughout 1941. The Popular Front appeared on the verge of collapse with the formal secession of the Socialists on Jan. 7 after a bitter feud with the Communists. Disregarding possible political effects, Aguirre vetoed a bill passed by the rightist-controlled congress outlawing the Communist party. In the congressional elections on March 2, the reorganized Popular Front won 71 of 147 lower house seats and 19 of 45 senate seats, while rightist parties captured 61 and 21 seats respectively. Socialists, with 15 deputies and 5 senators, thus held the balance of power. Communists gained considerably, electing 17 deputies and 4 senators. The Popular Socialist Vanguard (former Nacistas) elected only two, including González von Marées. An organized Vanguardist mob attacked the Radical party convention in May, two days before the congress opened, and killed one delegate. The government arrested 42 Vanguardists and attempted unsuccessfully to put González in an insane asylum. Attempts in the new congress to expel its Communists failed by close votes, 71 to 66 in the chamber and 20 to 16 in the senate. After Russian entrance into World War II, the Communist-Socialist feud was patched up. The congress was especially interested in national defense and appropriated 4,000,-000,000 pesos (approx. \$135,000,000) for it.

Frequent cabinet changes occurred in 1941. After several months of bitter dispute with his own Radical party, Interior Minister Arturo Olavarría, advocate of rigid neutrality, resigned and was succeeded by Dr.

Leónidas Guzmán, honorary president of the anti-nazi and anti-fascist league. When President Aguirre became seriously ill in Nov., Dr. Jerónimo Méndez, little-known president of the Radical party, was named interior minister, and when Aguirre temporarily withdrew he became acting president. President Aguirre died Nov. 25, after which Méndez set new presidential elections for Feb. 2, 1942.

Nazi propaganda and other activities were strong late in 1941. When the Vanguardists failed to attract popular support, Germany, as a good will gesture, presented to Chile the German training ship "Priwall," which had been immobilized at Valparaíso from 1939. Rumours of a nazi-inspired putsch were common in 1941, especially after discovery of secret arms caches in southern Chile, where thousands of Germans lived. Many arrests followed, and investigation disclosed existence of semimilitary organizations said to include up to 200,000 members, chiefly of German extraction, at least 10,000 regular financial contributors and liaison with Argentine nazi plotting. Chilean neutrality policy continued, but the government co-operated, usually on an independent basis, with hemisphere defense plans. The government on Feb. 16 (even before U.S. action) took over three interned Danish ships (and later, two more) because of the acute shipping shortage. Five German ships, in Chilean ports from 1939, were allowed to escape, however. The government in June banned all outdoor public meetings and parades in favour of any belligerent state and on Aug. 9 forbade all radio propaganda.

During 1941 Chile concluded trade treaties with Mexico, Brazil and Colombia and nonaggression pacts with Bolivia and Peru. Chile acted as arbiter in a Costa Rica-Panamá boundary dispute, and began formal diplomatic relations with Canada. In Dec., Chile accorded the United States nonbelligerent rights and belatedly ratified the Havana pacts of July 1940. Chile also began negotiations with Argentina for modification of their treaty of 1881, demilitarizing the Strait of Magellan.

Ríos President.—Juan Antonio Ríos, Radical party candidate, won an easy victory in the elections on Feb. 1, 1942; Ibáñez was second in the balloting. Ríos was inaugurated April 1 for a six-year term. Despite the role of Foreign Minister Juan B. Rossetti in initiating the third foreign ministers' conference at Rio in Jan. 1942, Chile did not immediately break off relations with the axis powers as the Rio conference recommended. The government, in effect, marked time on foreign policy until Ríos' inauguration. Argentina and Chile, the only two American states not acting affirmatively on the Rio recommendations, tended to draw closer together in foreign policy.

Ríos did not immediately change the neutrality policy, but congressional debates on it became intense. Socialists were especially active anti-noninterventionists; Development Minister Schnake on June 4 asserted to a demonstrating crowd that Chile would not remain neutral. Criticism of government policy increased when it was announced in July that military officials, sent earlier to Washington on a purchasing mission, had been ordered home, presumably because of lack of success. When Ríos in Aug. accepted an official invitation to visit Washington, it was assumed that Chile would move gradually toward a break with the axis. President Ríos declared in Sept., however, that his purpose was to study the needs of hemisphere defense and that Chile would remain free to determine its own foreign policy. The statement seemed intended to placate the

noninterventionists, and Schnake in the same month resigned as minister of development. A great uproar came from the charge made by U.S. Undersecretary of State Sumner Welles in a Boston, Mass., speech on Oct. 8 that two Latin-American countries (unnamed, but unmistakably Chile and Argentina) were used as bases of axis activities. President Ríos immediately cancelled his imminent trip to the United States and instructed the Chilean ambassador to protest the Welles speech. Proaxis elements in Chile tried to stimulate Chilean resentment, but some informed nationals asserted the justness of the Welles charges. The government, on being given supporting evidence, began a campaign against axis spies.

Foreign Minister Barros Jarpa, increasingly regarded as the chief noninterventionist, soon became the centre of attack by the opposition, and attempts were made by mid-Oct. to force his resignation. He reportedly refused to withdraw unless the cabinet resigned en masse, and this step occurred Oct. 20; practically all former ministers were reappointed, however, except Barros Jarpa, who was succeeded by Joaquín Fernández y Fernández, Chilean ambassador to Uruguay. The new government moved more boldly against alien agitators. Interior Minister Morales went to Washington for secret conferences in Dec., thus seemingly forecasting closer Chilean relations with the other American republics.

The long-expected Chilean break with the axis finally came on Jan. 20, 1943, thus leaving Argentina as the only American republic maintaining relations. Chile's new status, and conferences held even before the break in relations, resulted in the signing, on March 2, of a lend-lease agreement with the United States. An important new copper purchase contract was concluded with the U.S. Metal Reserves corporation in June, extending an earlier purchasing agreement through July 1944, with increased prices for Chilean copper. The United States also agreed to purchase reasonable amounts of gold and manganese to assist Chilean economy, and to aid in shipment of machinery and coal needed by Chilean industry.

Despite its abandonment of neutrality, Chile maintained favourable relations with Argentina. The two governments in April signed a ten-year contract by which Argentina purchased substantial quantities of nitrates. Trade agreements signed late in Aug. provided for a great reduction in Argentine-Chilean tariffs and initiated plans for a projected customs union, in which it was hoped that other near-by states might eventually participate. The two governments also discussed plans for improvement of trans-Andean roads, especially for the reopening of the railway through the Uspallata pass, blocked by slides from 1934.

The year 1943 displayed much domestic political factionalism. The Socialist party was badly split early in the year by differences between Marmaduque Grove and Salvador Allende, with the breach not healed until April, when the two became respectively president and vice-president of the party. Chile's 22 parties found hurried realignments necessary in June because of the official dissolution of the Third International, the world Communist organization. The Chilean Communist party now attempted to organize a powerful leftist coalition, including both the Communist and Socialist parties as well as others. Legislative delays resulting from the political manoeuvring led President Ríos in June to form a cabinet of "experts" rather than of party representatives; conditions also caused him again to postpone his projected visit to the United

States. The "ministry of experts" was dissolved in Aug., although six of its members were retained in the new cabinet, which also included two members from the conservative Liberal party. A special congressional session in Oct. considered pressing financial matters, especially the prospective deficit of more than 500,000,000 pesos.

Industrial and port strikes proved troublesome in 1943, and the congress on Nov. 16 finally granted emergency powers to Ríos in the hope that executive action might improve Chilean conditions. By the so-called economic bill on Nov. 29, actually a constitutional amendment, all functions relating to the compilation of the annual budget were placed under the president's supervision and the president was given exclusive power to introduce the budget in the congress.

President Ríos as early as Jan. 14, 1944, began his efforts to keep his cabinet intact by rejecting the resignations of his finance and public lands ministers, both members of the conservative Liberal party. The national convention of the Radical party, of which Ríos was a member, opened its sessions in Concepción on Jan. 20 and began agitation for a cabinet composed entirely of members of leftist parties, which Ríos refused to grant. The Radical demand was strengthened by results of municipal elections on April 2, in which the surprising total of 765,092 votes was cast. The Democratic Alliance, a leftist coalition dominated by the Radical party, carried 805 seats in municipal councils, with especially important victories in Santiago, Valparaíso, and Viña del Mar, to 595 seats won by the rightist Liberal-Conservative coalition. When Ríos still refused to conform to the demand for cabinet reorganization, the Radical party ordered its five members who held cabinet posts to resign from the government; they did so, but when the president on April 26 refused to accept their resignations they decided to remain in the cabinet and the party consequently expelled them from membership. President Ríos declared that if he had to choose between the party and the presidency, he would follow an independent course.

Finance Minister Arturo Matte on Jan. 20 decreed the liquidation of all branches of two large German banks operating in Chile, and also of an allegedly pro-nazi news agency. The government on Feb. 23 began arrests to break up a large German spy ring formed by Maj. Ludwig von Bohlen, a former German embassy attaché. The Chilean activities were linked to current espionage in Argentina but, notwithstanding that, the Chilean government was the first to recognize the revolutionary Argentine government headed by Gen. Edelmiro Farrell, taking the action on March 3. This resulted in much criticism by the Radical party president, Alfredo Rosende, the Chilean Confederation of Labour and other groups and individuals, and contributed to the party crisis of April. Other points of friction in foreign affairs were the leftist demands that the government establish diplomatic relations with the U.S.S.R. and break relations with the Franco government in Spain, both of which Ríos refused to do precipitately. The foreign ministry announced on May 10 that Chile would extend nonbelligerent status to any non-American state which had already declared or later declared war against Germany or Japan. Following the opening of the French front on June 6, 1944, the Chilean senate sent congratulatory telegrams to Roosevelt, Churchill and Stalin. Inclusion of the third of these was considered significant in view of the lack of diplomatic relations between Chile and the soviet union. Negotiations were subsequently undertaken for the establishment of such relations, and the step was completed on Dec. 11.

Former President Arturo Alessandri, aged 75, was elected a Chilean senator in a by-election on Aug. 27, taking his seat Nov. 27. The return of "the lion of Tarapacá" to active politics was a sensation in Chile and was in part responsible for the charge by the Radical party that conservatives were again in control and were endangering Chilean social gains.

Debates in the congress in Feb. 1945 over Chile's war status led President Ríos to assert on Feb. 14 that Chile recognized a state of belligerency with Japan but not with Germany because "that nation is defeated." Ambassador Marcial Mora signed the United Nations pact for Chile at Washington, D.C., on Feb. 14. The senate and the chamber of deputies, on April 5 and 11, respectively, approved a declaration of war, and the president and his cabinet signed it April 11.

Domestic politics continued disturbed during 1945. Congressional elections on March 4 were immediately followed by a collective cabinet resignation which Ríos refused to accept. Later figures showed that rightist groups had won 23 senate seats and leftists 22; in the chamber of deputies the rightists were indicated to have 71 seats divided as follows: 36 Conservatives, 31 Liberals, 1 Progressive Liberal, 3 Agrarians; leftists divided 75 seats as follows: 38 Radicals, 18 Communists, 7 Socialists, 5 Falangists, 7 Democrats; 1 independent was elected. President Ríos later planned to organize a cabinet including Radicals, Liberals, Democrats and Agrarians, but, because of party disagreements, abandoned the plan April 30. A new cabinet sworn in May 14 was composed chiefly of moderate leftists from the Radical, Socialist, Democratic and Chilean Falangist parties. When the congress organized on May 22, Arturo Alessandri was elected president of the senate and Conservative Deputy Juan Antonio Coloma president of the lower house. A cabinet resignation on Sept. 20 allowed President Ríos to select a new ministry before departing for the United States.

Ríos made his twice-postponed visit to the United States in Oct. and was entertained by President Truman Oct. 11. An important purpose of the visit was allegedly to get U.S. commitments concerning the Chilean copper industry. Postwar plans announced in March 1945 involved the spending of some \$56,000,000 for construction, power development, railway equipment and housing; the government in Sept. considered plans for importing prefabricated houses to meet the growing shortage. As a countermeasure to inflation, the government in April sought authority for wide control over salaries, rents, prices and transportation charges.

Rios' Resignation and Death.—Ill health forced President Ríos to withdraw on Jan. 17, 1946, from active participation in the government; he was succeeded as acting president by Alfredo Duhalde, leader of the Radical party. Sen. Jaime Larraín García, an Agrarian party leader, announced on Jan. 1 that he would be a candidate for the presidency in the 1948 elections. Almost immediately after Duhalde had become acting president, he was forced to issue a warning against illegal strikes; the government on Jan. 22 withdrew legal recognition from two striking nitrate unions. This action led to other sympathy strikes and a large protest meeting at Santiago on Jan. 28, the latter culminating in fighting which caused the death of g and the injury of more than 100 persons. The government thereupon proclaimed a state of siege and the Chilean Confederation of Labour, in its turn, called a protest general strike of 24 hours for Jan. 30. The general strike ended Jan. 31, but the situation remained critical and the concurrent cabinet crisis continued until Feb. 2. A cabinet reorganization

occurred Feb. 3 but the following day workers began a new, though only partially successful, three-day general strike. Although strikers were primarily concerned with domestic considerations, on March 6 they demanded a Chilean break in relations with Franco Spain.

The death of President Ríos at Santiago on June 27, 1946, after a lingering illness of cancer of the stomach, threw the political scene into vastly more confusion. Duhalde on July 6 fixed Sept. 4 as the date for new presidential elections. The rightist parties, Conservative, Liberal and Agrarian, attempted to pick a coalition candidate during July but could reach no agreement; their chief possibilities were Arturo Alessandri and José Maza (Liberals), Eduardo Cruz Coke (Conservative) and Jaime Larraín García (Agrarian). The Radicals had a choice between Acting President Duhalde and Gabriel González Videla, former ambassador to France; the nomination ultimately went to González, and the party on July 27 expelled Duhalde from membership for "dereliction" of duties. Duhalde, nevertheless, withdrew from the acting presidency on Aug. 3 to become a presidential candidate, and was succeeded in office by Vice-Adm. Vicente Bielich. Alessandri on Aug. 11 withdrew as a candidate in favour of his son, Fernando Alessandri Rodríguez. The Communists at first appeared to favour their party president, Sen. Elías Lafferte, but later threw their support to González Videla. Socialists under Marmaduque Grove refused to join the leftist coalition and most of them subsequently supported Duhalde, as did the rightist Agrarians.

In the voting on Sept. 4, 1946, González won a plurality of about 48,000 in the 471,890 votes cast; his total was 189,606 to 141,585 votes for Cruz Coke, the Conservative candidate, who was second highest. Fernando Alessandri, the Liberal nominee, received 128,721, and Bernardo Ibáñez, running with some Socialist support, won 11,922. With no candidate thus getting an absolute popular majority, the election was thrown, according to constitutional procedure, into vote of the congress, which on Oct. 24 confirmed the election of González by a vote of 138-46. (R. H. FN.)

Chile's Political Cauldron.—English parliamentary methods were the first to influence the republic of Chile; they were followed by a trend toward French parliamentarism, which along with its virtues brought its vices of oratory (a Latin passion) and the resultant slowness which accompanies verbosity. During the decade 1937-46, several other influences, notably those of Switzerland and the United States, could be noticed, as well as the postwar infiltration of Marxist ideas, which increased or decreased with the sway of world politics.

President Alessandri succeeded in bridling the excesses of parliament and in expanding the powers of the executive to the obvious benefit of the nation. The vigilance exercised by an already conscious electorate over the work of congress and the administration itself increased to such an extent that this by itself could be considered a symptom of political maturity. But perhaps the decline of electoral abuses should be called the major event of the decade 1937-46.

Suffrage was an event without any real significance, as only a small minority exercised the right to vote. This very group of the population was in fact perverted by the direct or indirect, actual or oblique, corruption of the individual voter. Among the rural population especially, the results of an election did not give a true indication of popular trends. The legitimacy of the elections, however, and the purity of popular conscience increased enor-

mously during the decade. Popular education, which was beginning to reach the most outlying zones, together with the higher calibre of political candidates contributed toward this end.

"Islands" in the Andes and other extremely isolated spots continued to exist, created by the topography of the country; and these still resisted unification and centralization. But the "small, intelligent and virile nation" was emerging victorious over its geographical disadvantages."

The conservative classes looked with some anxiety at the rapid advance of communism (one result of the increased number of voters), but level-headed foreign observers believed that this phenomenon was a natural development. Unfinished primary education of two, three or four years produces voters in the factory, on the farm and in the mountains whose elemental mentality tends immediately toward drastic, totalitarian, immediate solutions. They had acquired no knowledge of the charm and pleasure

of true individual liberty.

These same voters were bound sooner or later to progress in their evolution; it was in the interest of the educated classes that this process be accelerated and shortened. Uruguay and Argentina were examples of the totalitarian disease, rural as well as urban, and those who felt alarmed at the prospects in Chile should be calmed and take

The Chilean temperament, as seen by various travellers and writers, was instructive in this respect. The nation had always been attracted to liberty, loving it with a quiet strength in normal times, but with a kind of desperate love when it disappeared. Chileans would accept even a miserable existence very gladly if it provided for the rights of the individual and the general enjoyment of peace and liberty, more by instinct than by conscious decision. Tyranny and even mere intervention irritated them.

In any case, the surest antidote for totalitarianism caused by popular desperation continued to be a farreaching and carefully planned agricultural reform, and betterment for the hard life of the miners.

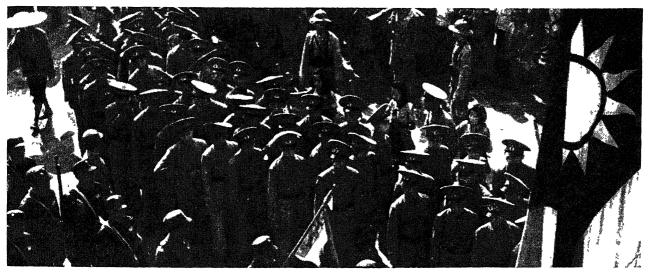

(G. Mis.)

Military ceremonies in Chungking on July 7, 1942, marking the fifth anniversary of China's war with Japan

China

With the recognition of the independence of Outer Mongolia and the restoration of Taiwan (Formosa) and Manchuria (in 1945, 9 provinces, previously 3) China had 34 provinces and two special areas, Tibet and Taiwan, totalling about 3,858,900 sq.mi. According to the ministry of interior, the estimated population of China in March 1945 was 454,928,000, excluding more than 6,000,000 in Taiwan. The estimated population of the leading cities in March 1945 was: Nanking (capital), 1,019,148; Shanghai, 3,726,757; Peiping, 1,550,561; Tientsin, 1,217,646; Chungking, 1,037,630; Canton, 1,115,000. (X.)

Japan's Plot.—In its thousands of years of history, it is doubtful whether China had ever experienced a more momentous decade than that from 1937 through 1946. Not only was there a rapid succession of events of major importance within the country but changes occurred in the pattern of world affairs concerning China which would not have taken place in the normal course for a century.

The Sino-Japanese war was not of China's seeking, and China sought to stave it off by making concession after concession to Japan until its hand was forced by the Marco Polo bridge "incident" which proved to be the curtain raiser of the bitterest war drama ever staged in the far east. That "incident" was curiously similar to the one Japan used as a pretext to justify its occupation of Mukden on Sept. 18, 1931, which was followed by the complete seizure of Manchuria and the subsequent establishment of "Manchoukuo." Japan gave as the excuse for this action the alleged tampering with the roadbed of the South Manchuria railway. The excuse for starting the Sino-Japanese war was even more flimsy. Manoeuvres or night exercises were being held by Japanese troops in the Marco Polo bridge area near the walled city of Wanping on July 7, 1937, despite the fact that the historical bridge was not included in the areas where foreign troops were allowed by treaty to hold manoeuvres. The Japanese officer in command of the troops, nevertheless, demanded the right to enter Wanping and search for one of his soldiers who was said to be missing. When the demand was refused, he opened shellfire on the city and the war had begun.

Nearly all Japan's political and military actions since the presentation of the Twenty-One Demands in 1915, which sought to impose its suzerainty upon China, had indicated that nothing short of the complete subjugation of China would satisfy the island empire. China's immense natural resources, manpower and market were necessary for the establishment of Japan's "new order in east Asia," as a preliminary step to its ambition to attain world domination. Japan had tried in vain to induce China to join a Japan-China-Manchuria bloc. Having failed to gain political and economic control over China by persuasive methods and political pressure—a failure testified to by the unlooked-for scope and vigour of China's nationwide boycott against Japanese goods and the ever-increasing tempo of China's awakening to national consciousness-Japan resolved to resort to force. Japan felt that China was making such national progress that the opportunity was swiftly passing, and it was literally a case of now or never. Japan created the Marco Polo bridge "incident" as a springboard for putting its military machine in motion.

The Japanese, militarists and civilians alike, expected a short and successful war. Prince Konoye, then Japanese premier, declared that China would be forced to its knees within three months. Throughout the eight subsequent years, Japan not only refrained from making a declaration of war but also consistently referred to the war as the "China incident." Japan abstained from any formal declaration in order to circumvent the U.S. Neutrality act and enable it to continue the purchase of scrap-iron, steel, gasoline, aeroplanes and other war materials from the United States. The declaration actually came from China on Dec. 9, 1941, when it also declared war on Germany and Italy.

In its dealings with China, one consistent feature of Japan's policy was to insist, when incidents were created, that they should be settled by the local authorities and not through diplomatic channels, as much greater and more immediate pressure could be imposed upon local officials than upon the national government. Japan insisted that the Marco Polo bridge affair should be so settled and, in fact, did compel the Hopei-Chahar Military council to grant some of its demands. The national government, however, took exception to the Japanese attitude and maintained that matters affecting national sovereignty could not be left to provincial officials. While negotiations were being held, Japanese reinforcements were pouring in from Manchuria and Korea to seize Tientsin and Peiping. The Chinese troops were withdrawn southward.

Hostilities in Shanghai broke out on Aug. 13, 1937, as a consequence of a Japanese petty officer being killed when attempting illegally to enter the Hungjao airfield.

Another feature of Japan's policy was to discredit the

west. Japan lost no opportunity to impress upon China that it held in contempt the democratic powers and that, in looking there for assistance, China was leaning on fragile reeds. The Japanese on Sept. 7, 1937, bombed from the air a car in which British Ambassador Sir Hughe Knatchbull-Hugessen was travelling, wounding him severely. On Dec. 12, 1937, they bombed and sank the U.S.S. "Panay" and shelled H.M.S. "Ladybird" and H.M.S. "Bee" in the Yangtze river near Nanking. Later, the Japanese blockaded the British and French concessions at Tientsin, the blockade being accompanied by the infliction of unspeakable humiliations on western women residents in the British and French concessions. While carrying out this policy of defiance to the west, Japan, before Pearl Harbor, astutely seized every opportunity of showing greater regard for U.S. interests than for British with the obvious hope of playing off these powers against one an-

A third feature of Japan's policy was to form puppet administrations in areas which came under its control. That feature of the policy had begun in Manchuria when Japan installed Henry Pu Yi as emperor of "Manchoukuo." Regimes similar in nature were formed in Kweisui, Peiping and Nanking, and later these were consolidated to some extent under Wang Ching-wei who turned traitor in Dec. 1938.

Japan strove systematically to terrify the people into submission by brutal treatment and by robbing them of all means of livelihood. The behaviour of the Japanese army at Nanking, when they indulged in a wild orgy of murder, arson and rape which aroused the horror and disgust of the civilized world, is a classic example. In later years, Japan attempted, by softening its methods, to induce the people to give voluntarily the co-operation which previously they had reluctantly accorded only under coercion. These efforts were, in the main, unsuccessful. But throughout the war Japan sought to debauch the morale of the people in forcing upon them opium, morphia, heroin and other deadly narcotics. One-third of the people in Manchuria were made drug addicts, and in other parts of occupied China similar tactics obtained.

Responsible Chinese civilian and military authorities were fully aware that China could not hope for victory in positional warfare. They deduced, however, from the trend of the world's political currents that a total world war could not long be delayed and that China would have a better chance of success when like-minded nations were forced, by the logic of events, to perceive at last that China's cause was their own. China could, meanwhile, make a valuable contribution to what it had long sensed would be another world war by keeping the Japanese at bay through guerrilla methods and, aided by time, space and the scorched earth policy, give the western powers time to prepare for what it felt to be inevitable. To make this contribution, nevertheless, entailed a terrible strain. The equipment of most of China's troops was inadequate and semiobsolete, and the country was not organized to meet the demands of protracted hostilities. China had no navy, and only an embryo air force. It had practically no heavy industries, and such light industries as China possessed were in coastal regions that were bound to fall to the Japanese soon after war started. These industries were, moreover, mainly under foreign control. In effect, China had to make preparation for war after war had already begun and perform, metaphorically, the feat of making bricks without straw.

Nevertheless the morale and fighting qualities of the Chinese soldier as exemplified in the battles of Shanghai, Taierchwang, Changsha, Changteh and Kunlunkwan, and the battles in Burma came as a surprise to most western observers, who at first were almost unanimous in the belief that China would speedily be vanquished. China, however, had faith that its two priceless assets, the character and number of its people and the vast extent of its territory, would be decisive in a prolonged struggle, and that China would eventually emerge victorious. This inspired the national leader, Chiang Kai-shek, and the Chinese people to enter upon a struggle which, they were repeatedly told by friends and foes, was hopeless from the beginning The miracle was that from 1937-41, China fought alone against the world's third most powerful nation. Even after Pearl Harbor China received comparatively little military aid from the outside world. Soviet Russia, before waging war with Germany, did send some pilots, planes and other war matériel, but owing to the difficulties of transportation over the Old Silk route, no appreciable amount trickled in. The United States, through lend-lease arrangements, provided China with the equipment for the Flying Tigers, known as the American Volunteer group, organized under General Claire Chennault on Aug. 1, 1941. This famous group, which possessed only 75 semiobsolete planes, was of the greatest assistance in uplifting Chinese morale; for after having fought alone for four years, the Chinese army and people were physically, mentally and spiritually weary. The Flying Tigers patrolled the Burma road, protected Chinese cities from indiscriminate bombing and inflicted heavy losses on Japanese shipping.

After the joint declaration of the United Nations was signed on Jan. 1, 1942, Generalissimo Chiang Kai-shek became supreme commander of the Allied forces in the China theatre. Contrary to China's hopes and expectations, Japan, instead of being checked, continued for some months to make incredible gains and advances in the Pacific. Three months after Pearl Harbor, Japan had severed China's last good supply route-the Burma road. All ports and other roads leading to the outside world had long been lost. There remained only the highly hazardous and inadequate air route through Assam over the Himalayan mountains. War also dislocated seriously China's internal communications. Of some 9,150 mi. of railway in China proper, sections of which had been feverishly constructed during the early phases of the war, all but one tenth eventually fell into Japanese hands. This also held true of the interprovincial highways.

China's contribution to the war effort which led to Japan's surrender in 1945, can be summed up as follows. First, China held Japan's military might at bay while giving the western powers time to prepare for the inevitable struggle. By 1945, China was holding 50 Japanese divisions in China proper, or two-fifths of the entire Japanese army, and 22 divisions in Manchuria. Second, although lacking even the elemental machinery and mechanized conveniences in everyday use in Europe and the United States, China built by human labour enormous airfields from which U.S. planes could take off to bomb Japanese installations and navy.

World Relations.—When the war started, China was on good terms with all the most important countries in the world except Japan. Significance should be attached to the fact that on Aug. 21, 1937, shortly after hostilities began, a Sino-soviet nonaggression treaty was concluded. The people in all countries, with the exception of those in the axis nations, unanimously condemned Japan and supported China. Their governments, however, at first lim-

ited their action to voicing platitudes regarding the necessity of preserving peace and to presenting paper protests to Japan. The United States and Great Britain were too much occupied with their own affairs to give China more than perfunctory moral support.

China, therefore, on Sept. 15, 1937, made a formal appeal to the League of Nations. The League assembly on Oct. 6 pledged support and pronounced Japan guilty of invading China in violation of its treaty obligations. This was followed by a nine-power conference held at Brussels, Belgium, which, on Nov. 24, adjourned indefinitely after urging a suspension of hostilities. The League council from time to time recommended individual aid to China by member states but at no time recommended collective action. On Sept. 20, 1938, the council complied with China's request for application of article XVII of the League covenant and proposed that Japan should accept league jurisdiction in its dispute with China. Japan reacted by severing relations with the league on Oct. 27.

From then on, in China as elsewhere, the pattern of world trends followed inexorably the sharp demarcation drawn between the policies and interests of the fascist nations as opposed to those of the rest of the world. This pattern became clearer in the increasingly close relations between the axis countries and Japan on the one hand, and the increasingly open and material support of China by the democracies on the other. Germany, Italy, Rumania and Siam recognized Japan's puppet regimes, and Germany and Italy withdrew their military advisers to China. Vichy agreed to "Japanese protection of peace" throughout Indo-China and the closing of the Indo-China railway to Kunming. The United States of America and the British commonwealth of nations, on their part, began to extend all possible aid to China short of outright military assistance. As a gesture of sympathy with China, and of condemnation of Japan, the United States gave notice on July 26, 1939, of its intention to abrogate the U.S.-Japanese treaty of 1911, and on July 25, 1941, the United States ordered freezing of Japanese and Chinese assets in that country. The Chinese assets were frozen at the request of the Chinese government. On the same date, Great Britain ordered the freezing of the assets of the two countries and the cancellation of the Anglo-Japanese treaty of commerce and navigation. The United States's application of the Neutrality act at first proved of more benefit to Japan than to China and Great Britain's closing of the Burma road, although temporary, added further hardships. But the United States, Great Britain and soviet Russia at critical times all extended credit loans to China either for obtaining war munitions or for stabilizing its currency, and in April 1941 the United States listed China as one of the beneficiaries of lend-lease.

Because of the adoption of the "Hitler first" policy, China received little immediate aid from lend-lease. Official U.S. information revealed that up to Oct. 2, 1944, China's share amounted to less than 0.5% of the lend-lease exports totalling \$21,534,000,000. Nonetheless, however little, lend-lease proved of substantial assistance to China, as it helped China to train a portion of its armed forces both in China and India and enabled it to send air and navy personnel to be trained in the United States.

Probably the most important development in foreign relations during the war years was the abrogation of extraterritoriality by the United States and Great Britain. Although by its participation in World War I, China had made a breach in the bastion of extraterritoriality, as long as the more important of the western nations held out it remained a semicolonial country and the citadel of in-

equality stood intact. Nominally a sovereign state, the exercise of its sovereign power was subject to the veto of the least of the nations with which China had treaty relations, since most of the treaties contained the most-favoured-nation clause. In 1941, in recognition of China's war effort, the United States and Great Britain, individually but after consultation, notified China that they were prepared to negotiate new and equal treaties shorn of the humiliating and offensive features which China so greatly resented. These treaties were signed on Jan. 11, 1943, and ratified on May 20 of that year. Later in the same year, the U.S. congress repealed the Chinese Exclusion act. Similar action was taken by El Salvador, Costa Rica and Honduras in 1944. Soviet Russia, soon after the downfall of the tsarist government, had voluntarily relinquished its extraterritorial privileges.

Various other treaties with foreign powers increased the atmosphere of good will. Among them may be mentioned those with Canada and France in which these countries also surrendered extraterritorial privileges, the Sino-Iraq treaty of friendship and a treaty of friendship and alliance with the U.S.S.R. In this treaty, signed Aug. 14, 1945, the U.S.S.R. agreed to render support and aid to the national government as the central government of China, and also stated that it had no intention of interfering in China's internal affairs. In notes which formed part of the treaty, China agreed to the full independence of Outer Mongolia and to the joint operation by China and Russia of the Changchun railway. Furthermore, China agreed to share Port Arthur with Russia as "an exclusive naval base . . . used only by Chinese and soviet military and commercial vessels," and consented to the harbour master of the port of Dairen being a Russian national.

Even before Pearl Harbor, the United States, Great Britain and the U.S.S.R. sent military missions to China, while in 1942, after the joint declaration of the United Nations was signed in Washington, China sent military missions to the United States and Great Britain. The friendliness and sympathy felt by the peoples of these and other countries were shown by their spontaneous action in raising relief funds and sending medical supplies to China's war sufferers. The United China Relief, including its co-ordinated organizations, and the British United Aid to China gave noteworthy assistance throughout the war years.

Chinese labourers levelling an air strip with stone rollers at Hsintsin, one of the many bases built by native labour in China for the U.S. air transport command

Aside from the purely governmental agencies, instrumental in establishing better understanding between China and the outside world, the frequent exchange of visits between important personalities of the United Nations and China resulted in closer co-operation. The traditional friendship between China and India was also strengthened during the war by the visit to China of Pandit Nehru and the visit to India of the generalissimo.

The Cairo conference, at which the generalissimo met President Franklin D. Roosevelt and Prime Minister Winston Churchill, resulted in a statement that the three leaders had agreed that "all the territories Japan has stolen from China such as Manchuria, Formosa, and the Pescadores shall be restored to the Republic of China," and that "in due course Korea shall become free and independent." After the Potsdam conference, which China did not attend, a joint proclamation was issued in the names of Truman, Chiang and Churchill, calling upon Japan unconditionally to surrender.

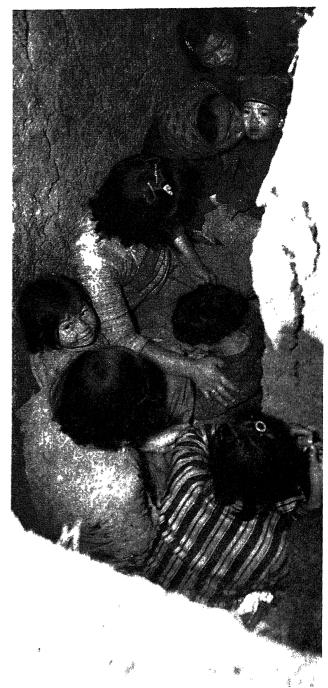

Australia and Canada initiated diplomatic relations during the war years. Other countries in South and Central America, in Europe, in Africa and in Asia, either established diplomatic relations for the first time or raised the status of their legations. Good relations with France were re-established after the Vichy government collapsed.

China took an active part in the organization of the United Nations. It participated in the international conferences on relief and rehabilitation, on food, on monetary and financial matters, on international aviation, on war crimes and on international security. Finally, China played a leading role at the United Nations World Security conference in San Francisco at which the United Nations was born. Confirmation of the new status that China had gained as a great power was given by its position as a permanent member of the Security council with France, the U.S.S.R., Great Britain and the United States.

Domestic Problems.—From 1925-37, the national government had been waging long and costly campaigns against regional warlords and the Chinese Communists. Although it had succeeded in eliminating warlordism, the Communists had never consented to relinquish their quasi-independent status which was incompatible with national unity.

The years immediately before the war brought to the surface within the country paradoxical trends of thought. Generalissimo Chiang Kai-shek was popularly acclaimed as the only possible national leader; in the same breath he was castigated for not waging an immediate war of resistance. In the capacity of national leader, he had to maintain patriotic fervour at a pitch which would steel the people willingly to undergo great privation and simultaneously to restrain them from imprudent actions before preparations for defense were further advanced. His was a difficult and perplexing position. If he publicly disclosed China's unpreparedness, he would have dealt a telling blow to national morale, and would certainly have spurred Japan to instant action. If he yielded to the insensate clamour for immediate war-reminiscent of the cries of "à Berlin" which led Napoleon III and the French empire to Sedan-China would probably have been crushed in a few months, perhaps not to rise again as an independent state for decades.

When war actually came, China was confronted not only by war problems, but also with the added necessity of putting its house in order, politically, economically and socially. The gravest political problem was still the dissen-

Huddled together in a slit trench, these Chinese women and children awaited an all-clear signal during an air raid in 1944

sion between the national government and the Communist party. That spectre hovered menacingly over the nation before, during and after the war. It had not yet been laid low by the end of the decade. But on several occasions it appeared that a satisfactory settlement might be reached. On Sept. 23, 1937, the Chinese Communists promised publicly to co-operate with the government, to abandon their policy of overthrowing it by armed force, to abolish their separate government at Yenan and to place their army under the direct control of the National Military council. Prospects of national unity had never looked brighter. The communist 8th route army was forthwith reorganized and became the 18th group of the national army, and the Communists were permitted to recruit the new 4th army. Friction, however, soon developed between these armies (the

officers of which were appointed by the Communists), and the government forces in the field. After 1938 the communist armies operated independently of the National Military council. Accusations of non-co-operation and obstruction were constantly interchanged; and armed clashes became frequent. In Jan. 1941 the National Military council ordered the disbandment of the new 4th army, but the order was disregarded. Meanwhile Yenan continued to function with its own administrative organs, currency and other appurtenances of a separate, independent government. The areas under communist control widened as war progressed, and the number of local administrations under Yenan and independent of the national government increased. Thus a condition of imperium in imperio existed sust as prior to the war, and with added areas. The situation became so charged with explosive possibilities that in Aug. 1945 the generalissimo (who, at the death of Lin Sen in 1943, had become chairman of the National government), invited Mao Tse-tung, political head of the Communist party, to Chungking in the hope of reaching a fundamental solution. Mao's visit to the war capital nevertheless brought no appreciable result.

Upon the resignation of General Patrick Hurley as U.S. ambassador to China, General George C. Marshall was sent by President Truman as his special envoy to China with ambassadorial rank. Relations between the government and the Communist party tended to improve under his indefatigable efforts to promote understanding and dissipate suspicion, although sporadic fighting still continued. The task of attempting to allay mutual distrust and fear proved difficult owing to the fact that for the previous 20odd years friction between the two had intensified and grown more bitter. For the purpose of effecting a settlement among all political parties, the Political Consultative conference was brought into being on Jan. 10, 1946. The 38 delegates to the council represented the Kuomintang, the Communists, the Democratic league, the Youth party and non-partisan organizations. At this conference resolutions were passed relating to government reorganization, peaceful national reconstruction, adjustment of military affairs, the convocation of the National assembly and the draft constitution. (See below.)

About the same time a separate committee of three, consisting of General Marshall as chairman and representatives from the government and the Communists, was also carrying on negotiations and eventually signed three important agreements: the cease-fire agreement of Jan. 10; the restoration of communications agreement of Feb. 9; and the military reorganization agreement of Feb. 25. The cease-fire agreement pointed out that "it does not prejudice military movements of the forces of the National Army into and within Manchuria which are for the purpose of restoring Chinese sovereignty." An executive headquarters composed of the commissioners and staffs representing the United States, the national government and the Communist party was set up in Peiping to effect the practical implementation of these agreements.

In the spring of 1946, during General Marshall's temporary absence in the United States, the situation took a turn for the worse. Despite the cease-fire and communications agreements, a recrudescence of fighting occurred in north China and gradually spread to other parts of the country. Sections of railways north of the Yangtze which had just been repaired were destroyed by communist armed forces. While the national forces were in the process of taking over sovereignty of territory vacated by the Russians, the Chinese Communists, contrary to the provision in the cease-fire agreement, rushed large forces into Man-

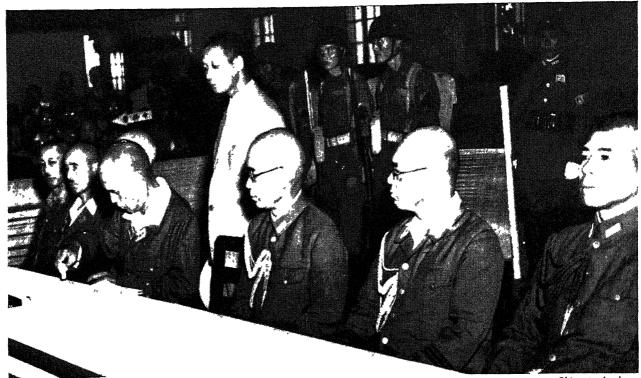

churia. In the case of Changchun, Yingkow and other strategic centres, the communist troops launched vigorous attacks on the skeleton national forces sent as token garrisons of the national government. Government forces counterattacked successfully and drove the Communists northward. The outlook further worsened when Mao Tsetung issued an order for general communist mobilization in Aug. 1946 and this was followed by intensified fighting in nine provinces. Meanwhile the Communist party declared that it would refuse to participate in the National assembly set for Nov. 12, 1946. The government had, on previous occasions, offered to hold this national convention to adopt the draft constitution which would end the political tutelage of the Kuomintang by returning power to the people.

The mediation of General Marshall, assisted by J. Leighton Stuart, newly-appointed U.S. ambassador to China, was rendered more arduous by the Communist demand that all U.S. troops should be withdrawn from China, coupled with accusations that the United States was giving direct assistance to the government. Yenan broadcasts and newspapers adopted a corrosive anti-U.S. tone, and communist armed forces on several occasions kidnapped, attacked and killed U.S. marines. Nevertheless, General Marshall and Stuart, in the summer of 1946, strove to break the government-Communist deadlock by seeking to create a committee to secure an agreement regarding the composition of the state council, the highest governmental organ, as an essential preliminary of cessation of hostilities and the formation of a coalition government.

Aside from the attempted solution of the communist question, many other political developments took place during the decade. The government strove to familiarize the people with the elective system for the hsien (district) and provincial assemblies as a step to train them to use a wider franchise. Another step taken to educate the people in representative government was the creation of the People's Political council "to utilize the best minds in national affairs and to rally all elements in the country in time of war." In 1938, at the first session of the P.P.C., the membership of 200 was selective, but in 1945 two-thirds of the members were elected. The functions of the council included preliminary investigation of the budget, interpellation of the government and its officials and recommendations to the government on national affairs.

Of the border regions, Tibet, throughout the war, manifested its loyalty in various ways, and in 1944 presented 25 warplanes to the Chinese air force. In May 1946 a Tibetan delegation of good will visited Chungking. Sinkiang, by reason of its geographical proximity, had close relations with the U.S.S.R., but in 1942 it came definitely within the government fold, and, despite local clashes in 1945, all outstanding questions were satisfactorily settled. To facilitate administration, Manchuria, formerly divided into the three northeastern provinces, was redivided into nine provinces. A new province, Sikang, had previously been created from parts of Tibet and Szechwan with a similar object in view.

In the earlier phases of the war, the influx of millions of people into the interior, fleeing from the advancing Japanese armies, caused new and difficult situations. To meet these, the government created the Ministry of Economic Affairs, the Ministry of Food and the National Relief commission, the precursor of the Chinese National Relief and Rehabilitation administration. In 1937 China had some 4,000 factories. Of this number, 30% were in Shang-

Surrender of about 1,000,000 Japanese troops in China took place at Nanking on Sept. 9, 1945 (Chinese time). Gen. Yasuji Okamura, seen stamping the document, signed for Japan; Gen. Ho Ying-chin accepted for the Chinese government

hai alone, and another 50% were scattered along the coastal provinces. When hostilities broke out, the economic affairs ministry moved the arsenals and other workshops engaged in war production into the interior, and assisted as many private enterprises as possible in their removal of machinery and personnel. Despite the risks of frequent bombing raids, work in free China continued uninterrupted inside the natural rock caves where some of the plants were hastily housed, although production greatly suffered from the destruction of power plants. A War Production board was set up in 1943. By the end of 1945 the number of factories equalled the prewar total.

Both the Ministries of Food and Economic Affairs were empowered to keep prices from rising and to prevent profiteering, and in 1941 their hands were strengthened by the National General Mobilization act. The Ministry of Food, in order to control food supply, instituted a system of collection of land taxes in kind and compulsory purchase (later changed to government borrowing) of foodstuffs from landowners. This and other efforts could not prevent inflation which was aggravated by the following factors: (1) the ever-growing number of refugee mouths to feed; (2) the ever-lessening supplies from the outside world, and (3) the ever-increasing difficulties of transportation from one part of free China to another.

The Ministry of Economic Affairs directed not only economic development during the war, but made plans for expansion in postwar years—one of the most notable being the survey of the Yangtze dam scheme modelled upon the U.S. Tennessee Valley authority. Its program of industrial reconstruction included the encouragement of postwar foreign investments in China. The liberalization of the company and mining laws was a step in that direction.

With the loss of the coastal and river ports, the customs and salt revenues which had served as the backbone of the government's income were curtailed and other sources of revenue somehow had to be found. Three methods were adopted: monopolies, direct taxation and loans. The revenue obtained from direct taxation in 1936 was Ch.\$7,250,

ooo, but in 1943, it advanced to Ch.\$3,781,000,000. Foreign loans included five from the United States totalling \$620,000,000, four from Great Britain totalling £58,000,000, and three from the U.S.S.R. totalling \$250,000,000. Domestic loans from July 1937 to Aug. 1945 produced Ch.\$15,022,000,000, £20,000,000, customs gold units 100,000,000 and U.S. \$200,000,000.

Education necessarily suffered in the war years. The Japanese in the earlier part of the war showed a pronounced animus against educational institutions by razing buildings, destroying libraries, laboratory equipment and all other educational facilities. Later they instituted an educational system of their own in occupied areas and prohibited the use of Chinese textbooks, except those they had specially prepared. A course in Japanese was made obligatory. In a series of Homeric treks to free China. large numbers of teachers and students went further inland. When, after encountering untold privations, they found a refuge, their troubles were by no means ended. Lack of adequate and suitable buildings, shortage of textbooks and other essentials led many educational institutions to amalgamate and pool resources. Some colleges had to move time and again. Flimsy and scarcely legible mimeo graph copies of textbooks were made and their use, especially as only oil lamps and candlelight were available for night work, left a lasting legacy of impaired eyesight. The improvised buildings in which the students shivered or sweltered were overcrowded and ill-adapted to withstand the extremes of cold and heat. Malnutrition prevailed. All these conditions caused an alarming increase of tuberculosis and a lowering of general health.

The rise in the cost of living to astronomical heights throughout these years pressed with exceptional severity on the white-collared class. Those with fixed incomes such as teachers, students and government employees experienced hard times in spite of the government's efforts to afford relief by extending certain privileges in the purchase of the necessities of life. Commodity prices increased over four thousandfold by Aug. 1946. During the war, the exchange rate was kept at Ch.\$20 to \$1, but early in 1946, because of inflation, the rate was Ch.\$2,020 to \$1, and again in Aug. the Chinese dollar suffered further depreciation and the rate became Ch.\$3,350 to \$1.

Attention has already been directed to the fact that the war brought momentous changes to China which would not have occurred normally for a long period of time. Intellectually and socially, the mass migration of refugees to the interior from the coastal and mid-China regions had an electrifying effect on free China. The refugees began to realize from firsthand observation the vastness of their country and the richness of its natural resources, while the mental horizon of the conservative hinter population became broadened through contacts with administrative, technical, educational and social experts. Rural and industrial co-operatives and other social service organizations undoubtedly contributed practical and moral support to national resistance. The free mingling of rural and city elements, too, added vitality and impetus to life in free China. Of necessity, war conditions broke down old customs, some for the better, others for the worse, but in general progress was made towards liberal ideas.

Notwithstanding universal suffering, war neurosis proved the exception. National stamina emerged with its banners frayed but triumphant. Women particularly, during the war, found new channels for activity and service. The Women's Advisory council of the New Life movement was chosen at the National Conference of Women Leaders held in 1938, the first of its kind, to co-ordinate women's participation in war work. Through it, women's organizations all over free China co-operated with the government and with other social and relief agencies. Special emphasis was placed on educating women in their national responsibilities, on assistance to the families of recruits, the wounded and the war orphans.

U.N.R.R.A. and C.N.R.R.A., during the latter part of and after the war, embarked on an ambitious program to rehabilitate and feed the hungry millions. Their work was impeded among other difficulties by the interruption of all means of communication necessary to the free passage of goods and personnel especially in the areas which had suffered pitiful devastation from famine and from the war.

The National government returned to Nanking, its capital, in May 1946. With its return, as far as interruptions to communications permitted, educational, social and other affiliated organizations were moved back to the regions that they had previously been forced to evacuate. After an interval of 51 years, China reassumed sovereignty over Formosa and set up a provincial government there. The acceptance of the surrender of Japanese troops in Indo-China north of latitude 16° N. was entrusted to China, which sent six divisions (about 50,000 men) to Hanoi on Aug. 21, 1945. Having fulfilled its mission, the force completed its withdrawal from Indo-China on June 10, 1946. The disarming of Japanese soldiers and their evacuation from China together with Japanese civilians, with the aid of U.S. naval and military forces, was practically finished by the end of 1946. An undisclosed number of Japanese soldiers was also reported to have been evacuated from Manchuria by the Russian army to Siberia. The new constitution, providing for a parliamentary form of government, was adopted by the National assembly on Dec. 25, 1946.

After a decade, eight painful years of which were spent in a struggle for national survival and freedom, the nation

was weighing its improved international status against the enormous sacrifice of life and economic devastation which, because of internal disunity, had not yet been repaired to any extent. (See also World War II.)

Chou En-lai

), Chinese communist leader, was Chou (1898born in Huai An, Kiangsu province, and attended Waseda and Japan universities in Japan and Nankai university in China. A member of a radical student organization in China, Chou was imprisoned in 1919-20 for his part in a student demonstration. After his release he went to Paris, where he became one of the leaders of the Chinese union, a group of Chinese communists in exile. He returned to China in 1924 and, together with the other communists, joined Sun Yat-sen's party in the nationalist revolution of 1925. Chief of the Whampoa military academy under Chiang Kai-shek and in charge of Communist party political affairs in the Kuomintang armies, Chou led the nationalist army in the capture of Shanghai. When Chiang later ordered the arrest of the communists and sentenced their leaders to death, Chou escaped and joined in the organization of the Chinese Red army. With the opening of a new offensive by Chiang in 1933, Chou was one of the leaders in the northern drive of the Red army. In spite of the civil war, Chou continued to urge a compromise with the Kuomintang and a united campaign against the Japanese. Thus, when Chiang was kidnapped in 1936, Chou was largely responsible for his release. With the culmination of the united front between communist and nationalist forces, Chou became military adviser to Chiang and, in 1938, vice-director of the political department of the military council of the 8th route army. The rupture between the two Chinese parties again appeared in 1941, when Chiang refused the demands of the communists for the legalization of the Communist party and the independent maintenance of the Red army.

Chou, second only to Gen. Mao Tse-tung in communist ranks, was active in the negotiations leading to a temporary accord between the Kuomintang and the communists in Jan. Feb. 1946.

Christian X

King Christian of Denmark (1870—) was born at Charlottenlund castle near Copenhagen, on Sept. 26, 1870. Nephew of Queen Alexandra of Great Britain, he succeeded his father, Frederick VIII, in 1912.

Standing high physically, King Christian continued to stand high politically during the decade 1937–46. As monarch of a democratic people, he showed unusual ability in maintaining contact with the people on the one hand, and in preserving the dignity and detachment of his office on the other hand. His years-long habit of a morning horseback ride through the streets of Copenhagen was broken only when he fell from his horse, Oct. 19, 1942, and was seriously injured; pneumonia followed, and the nation worried, but the king recovered slowly, and the continuity of the monarchy was undisturbed in the critical war years.

Undoubtedly the king had much to do with Denmark's policy during World War II—a policy which began with yielding to superior force on promise by the nazis to re-

spect the sovereignty of king and nation, but which shifted as the war progressed to more and more open hostility to the Germans. When Hitler sent elaborate greetings to Christian on his 72nd birthday, Sept. 26, 1942, the Danish monarch insulted the fuehrer with the curt reply, "Thank you. Christian, Rex."

When the Germans demanded that the Danes pass anti-Semitic laws, Christian attended a synagogue and is reported to have said that if Jews had to wear a special badge he would wear one too. He refused to obey the German demand that Danish ships be armed.

This was all in keeping with the popular spirit and gave encouragement to the increasing resistance. When open rebellion against the nazis broke out in Aug. 1943, the Germans imprisoned the king at Sorgenfri castle. He returned to his official residence at Amalienborg on Sept. 6, 1944, but was of course not a free agent. Danish rejoicing at their deliverance brought great demonstrations at Amalienborg both at the moment of liberation and again on Sept. 26, 1945, the king's 75th birthday, when royal relatives from Norway and Sweden added their presence to the celebration of Copenhagen and all Denmark, honouring the man who so nobly personified the Danish spirit. (See also Denmark.) (F. D. S.)

Christian Science

In 1936, 70 years after the discovery of Christian Science by Mary Baker Eddy and 57 years after the organization of the Church of Christ, Scientist, the branches of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., had reached a total of more than 2,700 Christian Science churches and societies throughout the world. The Christian Science Publishing society was continuing its steady growth in the publication of Christian Science literature, consisting in part of the Christian Science Journal, a monthly publication; the Christian Science Sentinel, published weekly; the Christian Science Quarterly; the Herald of Christian Science; and the Christian Science Monitor, an international daily newspaper. By 1936, the magazine section of the Monitor, then in the second year of its publication, had won a prominent place in the literature of the day. In that year, more than 1,000 answers were received in reply to a questionnaire sent by the Monitor to members of the American Economic association, soliciting opinions as to the business situation.

The publication of the classified results attracted wide attention in financial and commercial circles as well as in Washington, D.C.

In 1936, relief was sent abroad to those in need because of economic conditions. Relief totalling \$58,750 was dispensed to those in distress caused by hurricane in Florida; by earthquake in Montana; by tornado and floods in southern and eastern states. From its inception, the Christian Science Church had taken an active interest in world affairs and responded generously when emergencies arose calling for instant financial aid.

When the hurricane swept the eastern coast in 1938, a cyclone struck Illinois, and a flood did great damage in California, The Mother Church contributed more than \$47,000 for the relief of sufferers in those areas.

As the need for assistance in countries overseas was increased by the exigencies of World War II, The Mother Church and its branches responded generously to the emergency. In 1940, the Christian Science Board of Directors announced the opening of The Mother Church War Relief fund for contributions within the United States to be used "for food and clothing to relieve human

suffering" in some of the countries which were at war. The Christian Science movement endeavoured to assume its share of the responsibility of caring for the need for rest and recreation of the large number of men in U.S. military centres abroad. By the middle of the summer of 1940, rest centres were opened in Aldershot, Great Britain's largest training camp, on one of its busiest streets. Similar centres were opened in other large military camps. Shortly thereafter, a collection and mailing depot was opened by the Christian Science War Relief committee in Boston for the convenience of those who desired to contribute aid for civilians and soldiers in Great Britain in the form of warm winter clothing, as well as knitted articles for men serving in the land, sea, or air forces. By Dec. 1940, the first shipments of clothing sent by the Christian Science War Relief committee arrived in England.

Workers in Great Britain supplied much of the initiative for the war relief work. A war relief fund contributed by Christian Scientists in Great Britain enabled workers there to set up canteen and clothing depots. They were aided in this work by contributions from the Christian Science War Relief fund. Members of Christian Science churches throughout the dominion of Canada, organized as war relief committees of branch Churches of Christ, Scientist, shipped goods direct to British ports and helped to meet wartime needs in Canada.

From the small beginning of 34 cases of clothing shipped abroad in Oct. 1940, the work expanded rapidly to an average of more than 500 cases a month by June of the next year. Each case contained about 200 garments. Clothing came from Christian Science organizations in every state in the union as well as from Cuba, Puerto Rico, Alaska and Hawaii.

During this period, relief also was dispensed in the amount of more than \$150,000 to those communities experiencing losses caused by floods, hurricanes and tornadoes.

By Oct. 1940, more than 1,000 War Relief committees were shipping garments to Boston or to one of the three depots functioning in New York; Portland, Ore.; and Los Angeles. Shipments from those centres went direct to England. Christian Science literature at this time was being sent free of charge into almost all of the countries in Europe with the exception of the axis countries and those under their dominion.

In 1940 also, the publication of the new limited subscription edition of the textbook of Christian Science, Science and Health with Key to the Scriptures, written by Mary Baker Eddy and first published in 1875, was announced. This book was not a commercial venture. It was produced in order to have the textbook in a form which would preserve it for the ages. The beauty of its design, quality of materials and excellence of workmanship made it worthy to take its place among the outstanding examples of typography. The volume was issued as a Super Royal Quarto, 10 by 14 in. in size, and 21/2 in. in thickness. It was set in Laurentian type and printed on the best grade of English handmade paper that could be secured. The binding was of the finest quality of Indian Morocco, dyed a deep, permanent blue. The requirements for producing this volume were such as to preclude the possibility of reprinting. That same year the list of publications of The Christian Science Publishing society was extended to include a new book, The Mother Church Extension, by Margaret Williamson. At the annual meeting of The Mother Church in June 1946, it was reported that sales of Science and Health and other books by Mrs. Eddy in 1945 were more than twice those reported in 1940, and that sales were continuing to increase.

By 1941, camp welfare rooms were being maintained at

By 1941, camp welfare rooms were being maintained at points convenient to U.S. camps and military stations. During that year, The Mother Church and its branches in the U.S. shipped more than 700,000 lb. of clothing, valued at more than \$700,000, to Great Britain, where Christian Science committees distributed it for the benefit of sufferers from the war without regard to their religious faiths.

The wartime activities of the Christian Science denomination were expanded in 1942 by the appointment of Christian Science wartime ministers in connection with the armed services. At the end of that year there were more than 100 employed by the Christian Science Church. The wartime ministers conducted Christian Science services, responded to calls for help or healing, provided Christian Science literature, and were available 24 hours a day to help any serviceman who might wish to call on them.

Early in 1942, the editors of the Christian Science Monitor established a Peace department and provided a Peace Aims editor. The importance of the part played by this newspaper in international affairs was attested by the award of the Maria Moors Cabot Plaque by the trustees of Columbia university for promoting understanding and friendship in the western hemisphere. This was the first time a North American newspaper had received this recognition.

During 1943, the Monitor received the F. Wayland Ayer cup for excellence of typography, makeup and presswork, and a medal and citation awarded by the University of Missouri school of journalism for fulfilment of the assignment given to it by Mary Baker Eddy, "to injure no man, but to bless all mankind."

The work of the Christian Science War Relief committee continued unabated, and during 1943 clothing valued at \$256,887 was shipped to England alone for free distribution. Shipments of clothing to the U.S.S.R. amounted to 209,894 lb. Donations of clothing were made to refugees of many nationalities in the United States, Canada, England, and the soviet union, and to the Greeks in Egypt. The War Relief committee also distributed 173,963 pieces of knitted garments to men in the U.S. armed forces.

The Central War Relief committee of the United Kingdom maintained some 120 rest centres.

In 1945, 4 of the 25 Christian Science chaplains serving in the U.S. army received bronze stars for meritorious service.

Literature published by The Christian Science Publishing society was available at all rest and recreation centres provided for servicemen and servicewomen. Two new biographies, Twelve Years with Mary Baker Eddy, by Irving C. Tomlinson, and Mary Baker Eddy, Her Mission and Trumph, by Julia Michael Johnston, were published by the publishing society.

A Christian Science "Church of the Air" program originating over station WHAS in Louisville, Ky., sponsored by The Mother Church, received a certificate of merit from the National Federation of Press Women.

The Monitor received a fire-prevention award of a \$500 gold medal for outstanding service in the field of fire prevention. It also received the Helms Athletic foundation award in recognition of noteworthy achievement in the realm of sports. It won first honourable mention in the over-50,000 circulation group in the Annual Exhibition of Newspaper Typography conducted by N. W. Ayer and Son, Inc.

In 1946, the *Monitor* continued to maintain its large staff of correspondents throughout the world, and returned its correspondents to Moscow and Rome.

In July 1946, the publication of a Spanish translation of the *Herald of Christian Science* was added to the list of *Heralds* published in French, German, Dutch, Scandinavian and in Braille.

Postwar activities consisted in part of supplying Christian Science workers at 133 Veterans' Administration hospitals in the U.S. and Canada. The camp welfare activities of The Mother Church continued to serve military and naval personnel at training camps in the U.S., as well as occupation troops in the European and Pacific theatres. Rehabilitation work with discharged veterans was actively carried on by Christian Science branch church workers.

The Christian Science organization co-operated liberally in collecting and sending food packages to the faminestricken countries abroad.

By the middle of 1946, approximately \$11,000,000 had been expended for relief work in connection with World War II. During the war, more than 100,000 Christian Scientists served in the armed forces throughout the world. At the peak of the wartime activities, there were 26 Christian Science chaplains in the army and navy of the United States, 135 paid wartime ministers serving in the United States, 25 officiating ministers and authorized workers abroad, 481 overseas volunteer wartime workers in the Allied armed forces, and 495 civilian volunteer wartime workers in the United States.

Christian Unity

The high tide of the Christian Unity movement which culminated in the great occumenical assemblies at Oxford, England, and Edinburgh, Scotland, in 1937 was sadly obstructed during most of the following decade by the tragedy of World War II and the general interruption of communication among churches. On the other hand, the trials of the war period served to drive the channels of the unity movement even deeper than might otherwise have been the case, and gave accentuated significance to the relationships of the churches during the fateful decade. Meanwhile, the U.S. churches had been drawn closer together through the need to present a common front and to exert leadership in a world threatened with disintegration, through the necessity of special religious ministries to U.S. populations suffering mass dislocation through war and war industrial demands, and by the necessities of the largest-scale international job of relief and rehabilitation which had ever challenged the justice and generosity of the Christian churches.

In the realm of co-operative activity, the signal expansion of the Federal Council of Churches of Christ in America (q.v.), in the magnitude of its work, its finances and the professional quality of its services, was of first importance. Budget and staff alike were multiplied three-fold during the decade. The parallel development of state and local councils of churches, organizationally independent of, but closely affiliated with, the council, was equally striking. At the end of 1945, 35 U.S. states had developed inclusive councils of churches, and 13 others had some less inclusive interchurch agency. There were 147 city and country councils employing professional executive

leadership, and 345 city and county councils under voluntary leadership, while many of 1,600 ministerial associations were consciously performing important co-operative functions in behalf of the churches of their community. Within the decade, the British Council of Churches, combining previous co-operative movements and representing both the Church of England and the Free churches, came strongly into action, and the Canadian churches initiated their own council. Numerous national church councils were organized in Europe and the east.

The national meetings of the Federal Council increasingly became joint sessions with the more specialized national interchurch agencies of the United States. A plan launched in 1942 for the merger of eight such agencies and the Federal Council into a new and inclusive council was favourably acted upon by most of the agencies concerned and their constituent denominations, so that its early realization apparently was assured. Most of the major special wartime projects of the Federal Council were cooperatively undertaken with one or more other agencies, national or international. This was particularly true of its extensive war services.

Important additional churches joined the Federal Council, including the Protestant Episcopal, The Church of the Brethren, and the three branches of the Eastern Orthodox Church—the Syrian, Ukrainian and Russian. Local councils increasingly recognized and gained the cooperation of the more sectarian groups as the result of the growth of such groups in responsibility and the broadening of the basis of co-operation to meet the challenge of war services. The major organizations for postwar relief and rehabilitation consolidated.

Outside of the formal negotiations of churches, general attention to issues of Christian unity was heightened by important movements which advocated the general idea or propounded particular schemes for its realization. Prof. Adolph Keller of Geneva, Switzerland, conducted an important series of oecumenical seminars throughout the country. The Federal Council of Churches created a commission for the study of Christian unity without advocating any particular scheme of union. The community church movement became increasingly articulate in its criticism of the denominational system and in its demand for a type of local church life directly derived from the needs of communities. Dr. Stanley Jones persistently advocated a plan of federal union which would maintain denominational bodies but bring them into closer relations in important functions. This movement culminated in 1945 in the organization of the "Association for the Realization of the United Church." In 1946, the Disciples Divinity House of the University of Chicago, Chicago, Ill., announced the inauguration of an annual Christian unity lectureship, the first series to be given by the Protestant Episcopal bishop of Washington, D.C., the Rt. Rev. Angus Dun. From 1940 on, the Washington cathedral was host to an important annual gathering of leaders in the study of church unity problems.

Specifically authorized conversations or negotiations for the actual merger of denominations took place between many churches and in many countries. The merger of the three major Methodist denominations of the United States into the Methodist Church with some 7,000,000 members was consummated in 1939. Final measures for the previously authorized union of Evangelical and Reformed churches were completed. The Evangelical and United Brethren denominations, which had long been conducting conversations, announced a basis of union, which was submitted to each denomination, approved and consum-

mated in Nov. 1946. The northern and southern branches of American Presbyterians continued in active negotiations for union and published a joint Directory of Worship. The Congregational, Christian and Evangelical and Reformed churches promulgated a plan of union through a joint commission and entered into subsequent negotiation over details, with prospect of early consummation of the plan. Later, negotiations were authorized for the possible union of the Reformed Church in America and the United Presbyterian Church. The most far-reaching American proposal for union was that of the Protestant Episcopal and Presbyterian Church, U.S.A., in resolutions by the two churches in 1937-38 declaring that they sought organic union. Negotiations were conducted throughout the decade exploring various lines of approach but without discovering a formula which could finally be agreed upon. The continuation of negotiations was authorized by the Protestant Episcopal Church in 1946, and the advice of the Anglican bishops throughout the world was appealed to.

In Great Britain, an Outline of a Scheme of Union resulting from several years of conversations between special representatives of the Anglican and Free churches was published but was not acted upon formally. In other countries, movements of ecclesiastical unity were partly defensive and partly compulsory on the part of totalitarian nations. English and American Methodists united in Italy in order to strengthen each other. In Japan, under the compulsion of the Japanese government, all Christian churches were forced to unite, some of them unwillingly, in a government-controlled organization. Similar unity was partially forced upon the churches in the occupied portions of North China and in the Philippine Islands. Unification movements were similarly enforced in Germany. Their voluntary continuance in peace was still undecided at the decade's end. In all the oriental countries mentioned, union was in line with long-time and independently-developed tendencies within the church. The most authoritative news from the orient indicated that in all these countries a considerable measure of permanent unity would be retained under freedom.

Important unity movements in north and south India carried negotiations forward, and action in Sept. 1946 by the United Church of south India apparently assured consummation of the long-standing scheme of union in that area.

The Oxford and Edinburgh World conferences of 1937, involving in large measure the same personnel, were the most comprehensive gatherings of formally designated representatives of Christendom in 400 years. Their thinking gave direction to all subsequent unity movements. Identical action in the two conferences set up procedures for inaugurating a permanent World Council of Churches. A representative gathering of delegates to draft its constitution convened in Utrecht, Holland, in 1938 and created provisional machinery for carrying on its work. A North American section was promptly created in joint meetings of U.S. and Canadian delegates of churches. The anticipated early consummation of the formal organization of the council was prevented by World War II, but its work progressed rapidly under the provisional organization. Ninety-four churches in 33 countries on six continents had formally voted to accept membership by the end of the decade. Meanwhile, the important session in east India of the International Missionary council strongly reinforced the movement of unity by the importunities of the younger churches that the missionary-sending churches should cease to obstruct the aspirations, especially of the oriental peoples, for a united Christianity. The Amsterdam World Conference of Christian Youth in 1939 focused the interest of Christian youth upon the world-wide unity movement and gave it the strong backing of the younger generation. Up to the outbreak of European hostilities the continuation machinery of the Oxford and Edinburgh conferences was perpetuated by annual gatherings, and a conference of lay experts, meeting in Switzerland on the eve of World War II, resolved that the ties between the churches should not be broken even by war.

The term occumenical, meaning both world-wide and all-inclusive in content and interest, began to be generally applied to the organized movement of Christian unity. The activities of continuing commissions appointed by the Oxford and Edinburgh conferences were carried out throughout the war period, in the several countries not directly attacked or occupied. U.S. sections of these commissions were unobstructed in their work and issued important reports on the "Doctrine of the Church," "Intercommunion" and on "The Ethical Reality and Function of the Church." Two sets of official replies from the churches of the world to the Edinburgh discussions on unity were issued by the continuation committee. An important North American occumenical conference was held in Toronto, Canada, in 1941. Even in the heat of the war the secretaries of the Geneva headquarters of the World Council of Churches, in process of formation, found it possible to travel extensively among the European nations, including the belligerents. Extensive underground connections were maintained, and representatives of the churches were party to, and actively concerned in, the resistance movement in all occupied countries and in the most important plots to remove Adolf Hitler from power. Several informal meetings of World Council leaders were held in London and Geneva pending the possibility of a formal meeting of the provisional committee later. This was held early in 1946. The American Committee for the World Council reorganized itself so as to be formally representative of the American churches which had sought permanent membership in the council.

Immediately upon the freeing of western Europe from German occupation, representatives of the U.S. and British churches went to gain first-hand impression of European conditions and needs. The reorganized Evangelical Church of Germany was recognized provisionally. General Secretary Samuel McCrea Cavert made three trips and was loaned to the World Council for six months' service in connection with its plans for relief and rehabilitation. In early 1946 an occumenical deputation from the American Federal Council visited Japan. In turn, important World Council leaders made extensive itineraries in the U.S., including the executive secretary, Dr. W. A. Visser 't Hooft, Pastor Boegner, head of the Reformed Church of France, and the bishop of Chichester, England. Late in 1946 the archbishop of Canterbury also visited the United States and Canada and spoke in behalf of the oecumenical movement.

The emergency work of the World Council as well as its permanent activities were greatly aided by the gift of \$1,000,000 from John D. Rockefeller, Jr., one-half for immediate needs and the other half to establish an occumenical institute particularly for the training of lay Christian leaders. U.S. representatives, including Prof. John C. Bennett of Union Theological seminary, New York city, shared in the establishment and the initial work of the

institute. Both the American and the British affiliates of the World Council established active youth departments, and preparations for a world conference of Christian youth to be held in 1947 were actively under way. The first meeting of the full assembly of the World Council, to complete its formal organization, was scheduled for 1948.

* * *

THE PERMANENT LITERATURE of Christian unity was greatly augmented during the decade, first by the publication of the preliminary documents for the Oxford and Edinburgh conferences. These results of co-operative world scholarship appeared in many volumes. The joint committee of the Federal Council and Foreign Missions conference issued in 1940 an important report on "Christian Unity in Foreign Missions." In 1941, the first fulllength study and interpretation of the Federal Council of Churches appeared in the volume We Are Not Divided, by John A. Hutchison. The Church of England in Canada in 1942 issued an important document on the doctrine of the church. The successive pamphlet publications of the Federal Council commission on the bases of a just and durable peace dealt with the application of principles of unity to world affairs and the place of the church in bringing unity about. In 1944 the report of the Federal Council commission on the War in the Light of the Christian Faith, the co-operative work of a large body of Christian scholars, constituted a definitive analysis of the American churches' position on this most poignant of issues. The Federal Council of Churches continued to issue its biennial Year Book of the American Churches, the 1945 issue showing that the American churches had a larger percentage of the total population in their membership than ever before in American history. In 1938 the scholarly oecumenical quarterly Christendom began publication as an organ of the American Committee for the World Council. Numerous local community church surveys undertaken by the committee on co-operative field research gave guidance to states and cities in the development of their co-operative work. The Interseminary Series, an ambitious publication in four volumes, developing both the theological ground and practical application of occumenical ideas, was published at the end of 1946. Also in 1946 appeared the posthumous work of the Rev. William Adams Brown entitled Toward a United Church. It constituted an authoritative study of the occumenical movement in its world-wide aspect by one of its U.S. leaders.

The executive leadership of the World Council in its entire period of formation was in the hands of Dr. W. A. Visser 't Hooft, long connected with international Christian student work, whose ability and steadfastness kept the council's work in focus under most difficult circumstances. Rev. Dr. Douglas Horton, general minister of the Congregational Christian churches, succeeded Dr. William Adams Brown as chairman of the American committee of the World Council.

Chromite

The demand for chromite expanded at a rate exceeding the average industrial progress. Although production had dropped at the end of each economic cycle, each break was followed by a rapid recovery and an increase to a new high level. World production first surpassed the million ton mark in 1936, with subsequent increases to 2,210,000 short tons in 1942. In fact, production built up so rapidly during the decade 1937–46 that it accounted for close to two-thirds of the total recorded after 1900.

While production data were incomplete for 1944 and 1945, with figures at hand for all major producers except U.S.S.R. it was evident that the small drop in output in 1943 was considerably enlarged, with the 1945 total some where near the prewar level.

The recovery of production in the countries that fell into axis hands (Greece, Yugoslavia and the Philippines) required some time, though progress had already been made in some areas by the end of 1946. The main load of the expanded war demand was carried by Cuba, Rho desia, South Africa, Turkey and U.S.S.R., and these countries consequently faced the heaviest cuts as outputs were readjusted to postwar needs. Much of the Cuban increase was required to replace refractory ores formerly supplied by the Philippines, and future Cuban prospects were to a considerable extent dependent on the success attending the revival of the Philippine industry. In the soviet union. extensive exports were made during the latter war years. after several years in which the entire output was consumed at home. And finally, the direction of the produc tion trend in the postwar years depended on the rate at which industry developed new and expanded established uses for chromium. Previous experience indicated continued expansion in the consumption of chromium; while the unsettled industrial conditions that prevailed after the close of World War II could lead to a temporary slump in production, subsequent expansion was to be expected.

United States.—On the average the United States ab sorbed about half the world output of chromite, the actual proportions varying from as low as one-quarter to one-third in the early 1900s to as high as 60% in later years; during the decade 1937–46 the proportion was about half. Comparative figures of supply and consumption in the two war periods are shown in Table II.

In addition to revealing the increased demand in 1939-45 as compared with 1914-20, these figures show the extent to which the United States was dependent on foreign sources of supply. Viewing the records merely from the standpoint of tonnage produced, the 1939-45 record was much better than that of 1914-20, but in comparison with later demand and with the effort and cost to secure the results, the relative showing was much poorer. Furthermore, much of the 1939-45 output was too low in grade to be salable even under war conditions, and remained in stockpiles.

It was effectively demonstrated on two different occasions that only under war demand could the domestic reserves yield an appreciable output, at best only a fraction of the total required, and that of lower grade than normally required by industry. The availability of foreign supplies became, therefore, a matter of prime importance. This situation was emphasized all the more strongly by the fact that Cuba remained the only important producer in the western hemisphere and all other supplies were subject to the hazards of long overseas transportation. The sources from which these supplies were obtained during 1937-45 are shown in Table III.

Inspection of these figures discloses the extent to which the U.S. war program rested on maintenance of foreign supplies, and the shifts from one source of supply to another as shipping conditions or the progress of the war affected various producers.

The successful maintenance of an adequate war supply in spite of all the difficulties encountered is evidenced by a comparison of the supply and consumption columns for the years 1939 to 1945 in Table II. Each year showed a comfortable margin of surplus over consumption, which was stockpiled for future use in case of interruption of imports. At the end of 1945, the Metals Reserve Co. had 866,333 tons of chromite in storage in the United States, 492,587 tons

stored in foreign ports and 61,550 tons affoat, enroute to the United States, a total of 1,420,470 tons. Even though this record must be discounted to some extent, as about one-third of the ore stored in the United States was of domestic production (much of which was too low in grade to be readily usable) it still stood as a monument to a tremendous effort, made necessary by the U.S. lack of domestic chromite resources.

The stocks accumulated during the war years would presumably be turned over to the permanent stock pile, to be supplemented by future purchases until the amount reached the total recommended by the Army and Navy Munitions board.

The chief uses of chromite are in alloy steels, refractories and chemicals, all of which expanded greatly under war demand, as did the more specialized uses in superhard alloys, resistance alloys and high temperature alloys. Improvements in the latter were especially important in the development of gas turbines and jet-driven planes.

est" of both countries and pledged maintenance of Mediterranean status quo. ¶ Former U.S. Sec'y of the Treasury Andrew W. Mellon offered his \$19,000,000 art collection to the U.S. as a nucleus for a National Gallery of Art in Washington, to be constructed and endowed by him.

- 3. Representatives of United Automobile Workers of America empowered board of strategy to call strike in 69 General Motors plants in 14 states if company refused to negotiate with union; "sit-down" strikers continued to hold two Flint, Mich., Fisher Body plants in defiance of injunction.
- 6. Pres. Roosevelt, in message to congress on the "state of the Union," declared the constitution adequate to meet modern needs without amendment but called upon courts for a more "enlightened" attitude in interpreting it. U.S. house and senate passed Pittman-McReynolds resolution banning export of arms to Spanish Loyalists or Rebels. Embargo effective Jan. 8.
- 8. Pres. Roosevelt, in his annual budget message to congress, forecast a conditionally balanced budget in the fiscal year 1938 and a completely balanced budget and a halting of the rise of the national debt at \$35,000,000,000 the following fiscal year. ¶ Pres. Roosevelt authorized construction of two 35,000-ton battleships following Japan's refusal to renew naval limitation treaties, which expired
- 10. British gov't forbade enlistment of its citizens in either Loyalist or Rebel Spanish armies and called upon other powers to take similar action.
- 12. Pres. Roosevelt presented to congress his program for administrative reorganization; it called for two additional cabinet departments and for six executive assistants to the president, with all non-policy-determining offices placed under civil service.
- 13. U.S. state dep't warned citizens serving as volunteers with either Spanish army that they faced fines and imprisonment and possible loss of citizenship.

14. Col. Gen. Hermann Goering and Premier Mussolini in Rome conference agreed that, pending effective

nonintervention by all powers in Spanish war, Germany and Italy would rush support to Rebel forces.

- 15. French chamber of deputies unanimously empowered Premier Blum's gov't to bar French volunteers from Spanish armies when other powers agreed to similar measures.
- 19. Howard Hughes established a world distance speed record for land planes by averaging 332 mi. an hour in 2,490-mi. flight from Los Angeles to Newark, chiefly at an altitude of 14,000 ft., in 7 hr., 28 min. and 25 sec. ¶ Foreign Sec'y Anthony Eden solemnly warned Germany in commons speech that it could decide Europe's future; he promised British aid to reich if Germany abandoned idea of national exclusiveness and co-operated fully with other powers in efforts to secure peace.
- 20. Franklin D. Roosevelt took the oath as president of the U.S. for the second time, in the first American inaugural to occur on any date save March 4.
- 21. Foreign Minister Hachiro Arita, speaking before Japanese diet, urged colony-owning nations to adopt free trade policy toward nations lacking raw materials, as an aid to world peace.
- 23. Hirota cabinet resigned in Japan under pressure of army leaders bent on establishing fascist regime; on Feb. 2 Gen. Senjuro Hayashi, army moderate, formed new ministry.
- 24. Premier Léon Blum, in speech at Lyons, expressed France's willingness to help Germany solve its economic problems if assured that reich would co-operate in securing world peace. ¶ Bulgaria and Yugoslavia signed treaty of friendship:
- 25. Atlantic and Gulf coast maritime strike ended after 11 weeks' unsuccessful effort to secure union recognition.
- 27. Seed loan bill, providing for loans by Farm Credit administration not to exceed \$400, passed by U.S. senate without dissenting vote after debate on constitutionality. ¶ League of Nations council settled dispute between France, Syria and Turkey over Alexandretta.
- 28. Canada's "New Deal" legislation on wages and hours, unemployment insurance and marketing regulation, passed in 1934 and 1935 by the Bennett gov't, was declared unconstitutional by the privy council's judicial committee in London, empire court of last resort.
- 29. 12 U.S. navy planes completed hop from San Diego to Honolulu in 21 hr. and 43 min., the greatest non-stop ocean mass flight ever undertaken.
- 30. Chancelor Hitler, in reichstag speech commemorating National Socialism's fourth anniversary, repudiated "war guilt" clause of Versailles treaty, demanded return of former German colonies, and declared that reich was replacing "era of surprises" by one of international cooperation. ¶ Thirteen alleged Trotskyists on trial for treason against the soviet gov't were sentenced to death and executed on Feb. 1; four others, including Karl Radek and Gregory Sokolnikoff, former ambassador to Great Britain, were given prison terms ranging up to 10 years.

FEBRUARY, 1937

- 2. French chamber of deputies, 405 to 186, approved the Blum gov't's defense program, doubling the 19,000,000,000 franc appropriation already voted for 1937, to match reported German 1936-37 defense expenditure of 12,600,000,000 marks.
- 3. The 33rd International Eucharistic congress of the Roman Catholic Church opened in Manila. ¶ Pres. Roosevelt submitted to congress a report of the National Re-

sources committee, accompanied by recommendation for the adoption of a six-year \$5,000,000,000 public works program, including flood-control projects.

- 4. 40,000 seamen returned to work at conclusion of the 98-day \$686,000,000 Pacific coast strike, the most costly in U.S. maritime history; the men tentatively gained higher wages, union control of hiring agencies, better working conditions, and an 8-hr. day.
- 5. Pres. Roosevelt startled the U.S. by sending to congress an unheralded message and bill seeking comprehensive reforms designed to "vitalize the courts." He asked for power to appoint a maximum of six additional supreme court justices—one for each incumbent over 70 years of age who failed to retire—and up to 50 lower court justices.
- 7. William Green, president of the American Federation of Labor, declared that 8,917,000 persons were unemployed in Dec. 1936, despite an increase in the number of employed persons in that month.
- 8. Málaga, Spain, fell to Gen. Francisco Franco's Rebel forces.
- 11. The 44-day automobile strike ended, with General Motors corporation announcing a \$25,000,000 wage increase. Terms of the agreement included: recognition of the United Automobile Workers as bargaining agent for its membership, no discrimination against union members by company, union agreement to call off strike and evacuate plants and start of bargaining concerning working conditions. ¶ Chancellor of Exchequer Neville Chamberlain announced in British house of commons gov't's decision to spend £400,000,000 for rearmament during next five years.
- 12. The German reichsbank was placed under Chancellor Hitler's direct control and the railways under that of the transportation minister, allegedly to end "foreign influences."
- 15. Premier Senjuro Hayashi addressing first session of diet since fall of Hirota cabinet, announced a policy of non-aggression and invited China and the soviet union to establish more cordial relations with Japan. ¶ Chancellor Hitler authorized a free election of new general synod of the German Evangelical Church, recognizing failure of efforts to co-ordinate German Protestantism with the nazi regime.
- 16. London Non-Intervention committee agreed to prohibition against additional foreign volunteers in Spanish war, effective Feb. 20 at midnight; naval patrols and frontier supervision were to enforce ban on entry into Spain of arms and volunteers, effective midnight on March 6.
- 17. Paul V. McNutt, former gov. of Ind., named by Pres. Roosevelt as high commissioner to the Philippines, succeeding Frank Murphy, gov. of Mich.
- 18. Prime Minister Stanley Baldwin, in house of commons, stated Britain's intention to work for new regional security pact in western Europe to replace Locarno treaty.
- 19. Kuomintang party convention decided to terminate 10-year war on Chinese communists in return for latter's agreement to submit to Nanking gov't's supervision.
- 25. Ras Desta Demtu, son-in-law of Emperor Haile Selassie of Ethiopia, was captured and put to death by native troops under Italian command. § U.S. senate, by 58-24 vote, passed joint resolution, already approved by house, extending to June 12, 1940, president's power to negotiate trade pacts with foreign gov'ts.
- 26. Russia retired from international naval patrol of Spanish coast after participating powers conceded its right to take part. ¶ Premier Leon Blum won a 362-211 vote of confidence in French chamber of deputies.

- 2. General steel strike was averted by agreement between the Carnegie-Illinois Steel Corp., and C.I.O. union, providing for union recognition, wage increase and 40-hr. week.
- 3. U.S. senate, by a 63-6 vote, adopted the Pittman resolution providing for strict neutrality and a minimum of discretion for the president in the event of foreign war.
- 4. Pres. Roosevelt, speaking at Washington Democratic "victory dinner," tacitly demanded party's support for his court plan; declared its continuation as majority party depended upon courage immediately to "lead the American people where they want to go."
- 5. Sec'y of State Hull expressed U.S. regret in reply to reich gov't's official protest at New York Mayor La Guardia's reference to Hitler as "brown-shirted fanatic." On March 12 U.S. gov't officially protested subsequent German press attacks upon Mayor La Guardia, the U.S. gov't and American women. ¶"Big navy" advocates in U.S. house of representatives won signal victory when \$526,555,000 naval supply bill was passed after defeat of efforts to cut appropriation.
- 7. Francisco Largo Caballero, Loyalist premier of Spain, emerged from cabinet crisis with united support of all Leftist political factions.
- 8. New wave of sit-down strikes closed all major Detroit plants of Chrysler and Hudson automobile companies, affecting 60,000 workers. A.F. of L. announced drive to organize steel industry in opposition to C.I.O. ¶ The "Mar Cantabrico," laden with aeroplanes and munitions for Spanish Loyalists, was captured by Rebel cruiser in Bay of Biscay.
- 9. Pres. Roosevelt, in nation-wide radio address, declared his judiciary reform plan was designed to protect nation against usurpation of legislative functions by supreme court.
- 12. General Motors and United Automobile Workers of America concluded final agreement for improved working conditions, and for settlement of future grievances without recourse to the sit-down strike.
- 13. Offensive against Madrid by Italian troops in Spanish Rebel service met crushing deseat at Brihuega, near Guadalajara. ¶ French gov't expropriated Creusot works of the Schneider armaments firm, the largest in France.
- 17. 6,000 sit-down strikers defied court injunction ordering evacuation of eight Chrysler plants in Detroit; Gov. Murphy warned that state might have to use force to restore respect for courts and public authorities. Taxi strike in Chicago culminated in violent rioting in the loop district. Five units of U.S. Steel Corp., contracted with C.I.O. unions for year of industrial peace.
- 18. U.S. House adopted the McReynolds resolution giving the president discretionary powers to preserve American neutrality as opposed to mandatory provisions of senate neutrality bill. ¶ Pres. Quezon of Philippine commonwealth in conference with Washington officials asked complete independence for Philippines in 1938 or 1939 instead of on scheduled date in 1946.
- 21. Pope Pius in encyclical read from Berlin pulpits declared church would defeat all efforts to substitute modern ideologies for Christian faith; he attacked nazis for alleged violations of concordat.
- 22. Chief Justice Hughes, with assent of Justices Brandeis and Van Devanter, opposed Pres. Roosevelt's proposal to increase size of supreme court in letter read before senate judiciary committee.
 - 24. French foreign minister warned Britain and Ger-

- many that France would not stand for further direct Italian aid to Spanish rebels in violation of nonintervention agreement of Feb. 20.

 25. Detroit sit-down strikers evacuated Chrysler plants
- 25. Detroit sit-down strikers evacuated Chrysler plants on order from John L. Lewis, C.I.O. chairman, after Walter P. Chrysler on March 24 agreed not to resume production or move machinery during collective bargaining negotiations. ¶ Italy and Yugoslavia signed pact guaranteeing their mutual frontiers and status quo in Adriatic.
- 26. Attacks upon Italy in British house of commons produced new wave of intense anti-British feeling among Italians, spurred on by gov't press.
- 27. WPA report declared national production 20% higher than in 1929 would be required to reduce U.S. unemployment to 1929 level.
- 29. U.S. supreme court, by 5 to 4 decision, upheld Washington State minimum wage law, reversing its decision of previous June on similar New York state law. Court also upheld unanimously Frazier-Lemke farm mortgage moratorium law and sections of Railway Labor act requiring railroads to bargain collectively with their employees.
- 30. Pan-American clipper, surveying 7,000-mi. commercial air route between U.S. and Australasia, arrived at Auckland, New Zealand; stops were made en route at Hawaii, Kingman Reef and American Samoa.
- 31. Japanese diet was dissolved and new elections ordered.

APRIL, 1937

- 1. New constitution for India went into effect with inauguration of provincial autonomy, despite non-co-operation of Indian Nationalists. ¶ General Motors Chevrolet plant in Flint was closed by walkout, raising total of idle automobile workers in Mich. to 120,000. Move in U.S. senate to condemn sit-down strikes provoked sharp debate.
- 2. Two-year agreement between United Mine Workers and operators for wage increase of \$85,000,000 a year to 300,000 miners ended one-day stoppage of coal mining in Appalachian area. ¶ Basque Nationalists were driven back by Rebel drive on Bilbao; Loyalists gained on Madrid and Cordoba fronts; Cordoba was bombed with fleet of new Russian planes.
- 3. Henry G. Yagoda, former acting chief of O.G.P.U., dismissed as soviet commissar of communications for "criminal activities."
- 4. U.S. Federal Reserve board announced it would buy federal securities on open market for account of reserve banks to protect gov't bond market and extend easymoney policy.
- 5. U.S. senate passed Guffey-Vinson Coal bill, after rejecting, 48 to 36, an amendment declaring sit-down strikes "illegal and contrary to public policy."
- 6. Chrysler automobile strike settled by Walter P. Chrysler and John L. Lewis after 30-day tie-up, estimated to have cost \$87,000,000. New sit-downs closed three General Motors plants. Vermont legislature outlawed sit-down strikes.
- 8. U.S. house, 236 to 149, defeated proposed inquiry into sit-down strikes.
- 10. Italian gov't extended partial self-rule to Moslems of Libya; appropriated 85,000,000 lire for naval base at Assab, dominating southern entrance to Red sea.
- 11. Premier Van Zeeland of Belgium won striking victory over Rexists (fascists) in Brussels election, following denunciation of Rexist movement by Cardinal Van Roey, Roman Catholic primate. ¶ London cabinet, modifying

Britain's traditional maritime policy, ordered British merchant vessels bound for Bilbao, Spain, with food not to run Spanish Rebels' blockade.

12. U.S. supreme court, in four 5 to 4 decisions upholding National Labor Relations (Wagner) act, ruled that congress had power to regulate industries organized on national scale even if their products were locally manufactured; labour's right to organize in unions and bargain collectively with large industries was affirmed.

15. U.S. house passed Gavagan anti-lynching bill, 277 to 118, over protests of southern members. ¶ Reversing previous position, Italy expressed willingness to discuss withdrawal of all foreigners fighting on both sides in Spain's civil war.

18. Furthering Chinese unity against Japan, the formerly dissident Kwangsi war lords joined with Nanking leaders in forming new national defense council.

19. International patrol of Spanish coasts to bar foreign war supplies and "volunteers" went into effect at midnight.

20. Pres. Roosevelt in message to congress estimated deficit for fiscal year 1937 at \$2,557,000,000; asked \$1,500,000,000 appropriation for relief and work relief in 1938 fiscal year.

22. Agreement ending strike in General Motors plant at Oshawa, Ont., was signed in Premier Hepburn's office. ¶ Premier Mussolini refused Italian support for restoration of Habsburgs in Austria in conference with Chancellor Schuschnigg at Venice.

23. Riot of cannery strikers in Stockton, Calif., caused injuries to 50 persons. Sit-down strike of 1,200 workers closed Ford Motor Co. plant at Richmond, Calif. ¶ U.S. gov't filed suit in New York for dissolution as a trust of \$174,000,000 Aluminum Co. of America, controlled by former Sec'y of Treasury Mellon and associates.

24. Assembly of 33 civilians took over the civil gov't of Madrid on orders from Premier Largo Caballero. ¶ Joint

London throngs at Buckingham palace waiting, under a mass of umbrellas, for a glimpse of the king and queen after their coronation at Westminster abbey on May 12, 1937

Anglo-French note to Belgian foreign minister freed Belgium of its obligations under Locarno treaty, while continuing the Anglo-French guarantee of Belgian neutrality.

25. Strongly fortified peaks guarding road to Bilbao were captured by Spanish Rebels. On following day Durango, key to Basque capital, and Eibar were occupied and Guernica, ancient Basque capital, was destroyed by terrific 3½-hr. aerial bombardment.

26. U.S. supreme court by 5 to 4 decision nullified 17to 20-year prison sentence passed by Georgia court on Angelo Herndon, Negro communist, as violating guarantees of liberty in 14th amendment.

29. Compromise neutrality bill was rushed through both houses of congress to replace temporary legislation due to expire at midnight of May 1; gave president discretionary powers.

30. Agreement for termination of capitulations in Egypt in 1939 reached at international conference at Montreux, Switzerland.

MAY, 1937

- 1. Chancellor Hitler defied anti-nazi religious groups and Pope in May day speech to German labour; demanded exclusive nazi control over youth.
- 2. U.S. labor dep't estimated 8,241,000 increase in employment since March, 1933, low point of depression.
- 3. A final divorce decree was awarded Mrs. Wallis Warfield Simpson in London.
- 4. Premier Mussolini and Foreign Minister von Neurath of Germany, meeting in Rome, planned closer Italo-German collaboration and development of mid-European bloc of fascist states.
- 6. \$10,000,000 Mellon Institute of Industrial Research dedicated by Andrew W. Mellon at Pittsburgh.

- 8. Mussolini recalled all Italian journalists in London and barred all except three British newspapers from Italy.
- 11. Prime ministers of five dominions presented "loyal addresses" to George VI at Buckingham palace ceremonies.
- 12. George VI was crowned king and emperor in Westminster abbey.
- 14. Imperial conference opened in London. ¶ Henry T. Merrill and John S. Lambie, Jr., completed first commercial round-trip plane flight over North Atlantic, landing at New York city from Liverpool, England, with coronation pictures five days after take-off from New York.
- 15. Loyalist cabinet at Valencia, Spain, resigned; more moderate ministry formed May 17 by Dr. Juan Negnin, Socialist and former finance minister. ¶ Silver jubilee of Christian X of Denmark celebrated at Copenhagen, with kings of Norway and Sweden in attendance.
- 16. Four high officials of Soviet Central Trade Union council arrested for malfeasance and "Trotskyism"; all except one member of council's secretariat dismissed. On May 17 Kremlin decree established supreme military councils to control army commanders.
- 17. U.S. supreme court, 4 to 3, upheld Louisiana tax on chain stores based on total number of stores in each chain system.
- 18. U.S. Supreme Court Justice Willis Van Devanter, known for his conservative and anti-New Deal decisions, resigned, effective June 2; senate judiciary committee, 10 to 8, voted adverse report on Pres. Roosevelt's court reorganization measure.
- 19. Reich press and radio bitterly attacked Cardinal Mundelein of Chicago, who charged that immorality trials of numerous monks in Germany were merely anti-Catholic propaganda.
- 20. 27,000 employees of Jones & Laughlin Steel Corp. voted 2 to 1 in favour of C.I.O. affiliate as their collective bargaining agent. ¶ George VI's coronation review of more than 300 British warships took place at Spithead.
- 21. Soviet aeroplane, landing at north pole, established permanent weather station there in preparation for regular polar air line to United States. On May 22 soviet gov't claimed north pole as its permanent possession. On May 26 three more soviet planes reached pole from Rudolph Island.
- 23. Trotsky announced that his "fourth international" had enrolled thousands of members in 30 countries.
- 24. Social Security act upheld in three decisions of U.S. supreme court. On same day Pres. Roosevelt urged congress to "extend the frontiers of social progress" by passing bill establishing maximum hours and minimum wages and abolishing child labour.
- 26. Egypt was admitted as 59th member of League of Nations.
- 27. Spanish Loyalist White Book, supporting charges of Italian aggression, submitted to League of Nations council with demand for action.
- 28. Neville Chamberlain succeeded Stanley Baldwin as British prime minister; cabinet reorganized.
- 29. Spanish Loyalist planes bombed German pocket battleship "Deutschland" in Iviza harbour, Balearic Islands, killing 23 and wounding 83 members of crew. ¶ Social-Democratic Federation convention at Pittsburgh urged union of Democratic Socialists, organized labour, and Progressives in third party for 1940 presidential campaign.
- 31. German warships bombarded Almeria, Spain, killing 20 or more and wounding 100 persons, in reprisal for Loyalist bombing of battleship "Deutschland." Germany and Italy withdrew from London Non-Intervention com-

mittee and from patrol of Spanish coasts. ¶ Hayashi Cabinet resigned in Japan.

JUNE, 1937

- 3. Duke of Windsor and Mrs. Wallis Warfield (formerly Simpson) were married at Château de Candé, Monts, France, by Mayor of Monts, performing civil ceremony, and by the Rev. R. Anderson Jardine, vicar of St. Paul's church, Darlington, England. ¶ Bills for establishment of seven national planning agencies similar to Tennessee Valley authority introduced in congress. ¶ Prince Funimaro Konoye formed national union cabinet in Japan.
- 8. American Medical ass'n approved birth control as having a definite place in medical practice. ¶ The longest total eclipse of modern times—7 min. 2 sec. at its maximum point, 1,000 mi. S.W. of Honolulu—was studied by scientists at sea, on land and in air.
- 11. U.S. house voted to extend "nuisance" taxes for two years. ¶ Soviet military court condemned to death on charges of treason Marshal Mikhail N. Tukhachevsky, con-

The Duke and Duchess of Windsor after their marriage at the Château de Candé near Tours, France, on June 3, 1937, six months after he had abdicated the throne of England

sidered Red army's ablest strategist and most popular leader, and seven other important generals; sentences executed June 12.

14. AUGUST, 1938

- 2. Both Japan and Russia claimed victory as large-scale fighting continued around Changkufeng.
- 3. Pres. Cárdenas of Mexico refused U.S. request for arbitration of American-owned land seizures.
- 5. Premier Kung of China flew to Chungking, completing transfer of gov't to new capital in face of impending

- Japanese capture of Hankow, provisional capital city.
- 8. Chinese reported exposure of plot by separatists in south China to set up independent gov't under Japanese influence.
- 9. Father Divine, Negro preacher, arrived at Crum Elbow with 2,500 "angels" to take possession of his newly purchased "paradise" across the Hudson river from Pres. Roosevelt's estate.
- 10. Armistice agreement reached by Maxim Litvinov and Japanese Ambassador Shigemitsu to cease border fighting Aug. 11 and to set up commission of two Russian and two Japanese-Manchurian representatives to fix boundary line. ¶ Pres. Roosevelt resumed "party purge" by endorsing Lawrence Camp, opponent of Senator Walter F. George, for Democratic senatorial nomination of Georgia; the next day he assailed George directly as a reactionary.
- 14. "Queen Mary" established new record for eastward crossing of Atlantic: 3 days 20 hr. 42 min. Six days before, it had set a new westbound record.
- 16. Sen. Millard Tydings of Md. and Rep. John J. O'Connor of N.Y. were denounced by Pres. Roosevelt, who urged their defeat in primary elections.
- 18. Assistance to Canada in case of invasion by any foreign power was pledged by Pres. Roosevelt in Kingston, Ont., address.
- 19. British troops and Arab rebels clashed in battles at Hebron and on plain near Nablus.
- 20. Vatican and Italian gov't announced new accord by which Catholic Action associations agreed to refrain from political activities.
- 21. Gen. Franco announced categorical rejection of British plan for proportionate withdrawal of foreign troops from Loyalist and Insurgent armies.
- 23. Right of Hungary to rearm was affirmed by Little Entente conference in Bled, Yugoslavia.
- 24. Hitler guaranteed sanctity of Hungarian border, at state banquet honouring Admiral Nicholas Horthy in Reelin
- 26. British home fleet ordered to leave south England bases for battle stations at Invergordon, Scotland, on Sept. 6, the opening day of Hitler's nazi congress at Nürnberg.
 - 28. Missionaries reported death of Tibetan regent.
- 29. Maj. Alexander P. de Seversky, aeroplane designer, set new U.S cast-west transcontinental speed record of 10 hr. 3 min.
- 30. British and French cabinets met in special sessions to deal with Czech crisis. Foreign Minister Georges Bonnet reaffirmed France's intention of supporting Czechoslovakia in case of German invasion. Sir Nevile Henderson, British ambassador to Germany, was instructed to fly back to Berlin with verbal warning to Hitler against undertaking war. ¶ Soviet naval commissariat confirmed repeated rumours that highest ranking officers of Russian navy—including Admiral Vladimir R. Orloff, former commander in chief, and Admiral A. K. Sivkoff, former commander of Baltic fleet—had been executed at Stalin's order.

SEPTEMBER, 1938

- 1. Pres. Lázaro Cárdenas opened Mexican congress with speech in which he refused U.S. demands for arbitration of land scizures. ¶ Foreign Jews who had entered Italy after 1919 were ordered by cabinet decree to emigrate within six months. ¶ Hitler, in conference with Konrad Henlein at Berchtesgaden, rejected Czechs' third proposal for negotiation of Sudeten dispute.
- 2. Italian gov't continued attack on Jews by barring non-Aryan teachers and students from all state and private schools.

- 5. Prague cabinet drafted fourth and "final" offer to German Sudetens; plan in essence met Konrad Henlein's eight-point autonomy demands pronounced at Karlsbad April 24. ¶ France cancelled all army furloughs and moved additional reservists into Maginot line. ¶ U.S.A. retained Davis cup by defeating Australia, 3 to 2.
- 6. Nazi party congress formally opened at Nürnberg; Hitler declared that a wartime blockade of Germany would be "entirely ineffective." ¶ Registration of all aliens engaged in propaganda and political activities for foreign nations ordered by U.S. dept. of state.
- 8. France announced completion of military preparations, with 1,200,000 men under arms; naval ministry cancelled all leaves in Atlantic fleet.
- 9. Hitler warned that Germany "is determined to capitulate to no one," in address before 180,000 party leaders at Nürnberg.
- 12. Hitler demanded self-determination for Sudeten Germans and pledged them military aid; his speech closing Nürnberg party congress was followed by nazi demonstrations in Sudeten area. ¶ Justice Ferdinand Pecora of New York declared mistrial in case of James J. Hines, Tammany leader charged with protecting "policy numbers" racketeers; Pecora ruled that District Attorney Thomas E. Dewey had prejudiced Hines's case by attempting to link defendant with New York city poultry racket. ¶ Entire Chilean cabinet resigned as political aftermath of Sept. § uprising; Pres. Arturo Alessandri declared state of siege.
- 13. Sudeten party issued ultimatum to Czech gov't that it revoke martial law declared in Sudeten areas after several fatalities in clashes between state police and nazis; Prague ignored ultimatum, which expired early Sept. 14.
- 15. Prime Minister Chamberlain made flight to Germany for three-hour conference with Hitler at Berchtesgaden. Czech gov't ordered arrest of Henlein for treason; Sudeten leader fled to Germany.
- 16. Great Britain asked League of Nations to make sanctions provisions of covenant optional for all adhering powers. ¶ British Capt. George E. T. Eyston set new world's automobile speed record of 357.5 m.p.h. at Bonneville salt flats, Utah; he broke John R. Cobb's one-day record of 350.2 m.p.h. and his own former mark of 345.49 m.p.h., established Aug. 27.
- 17. State of emergency declared by Czech cabinet for whole nation; British cabinet considered proposal to let Hitler annex Sudeten regions.
- 18. Premier Milan Hodza broadcast Czech cabinet's refusal of plebiscite for Sudeten Germans.
- 19. France and Great Britain instructed their ministers at Prague to recommend to Czech gov't the surrender of all regions with predominant German populations, in return for Anglo-French guarantee of new boundaries. ¶ League of Nations Assembly for the first time invoked article XVII of covenant by asking Japan to assume membership duties temporarily for arbitration of Sino-Japanese War. Japan declined the invitation on Sept. 21.
- 21. Czech cabinet accepted Anglo-French plan for cession of Sudeten territories to Germany, "because we were alone." The decision, subject to parliamentary approval, was reached after Britain and France had presented a second "ultimatum" to Pres. Benes at 2 a.m. ¶ Budapest and Warsaw démarches to Czechoslovakia demanded same rights for Hungarian and Polish minorities as for German.
- 22. Gen. Jan Syrovy replaced Milan Hodza as Czech premier; he was named minister of war also.

Historic meeting of Sept. 29, 1938, at Munich, Germany. Foreground, left to right: Prime Ministers Chamberlain and Daladier, Adolf Hitler and Benito Mussolini

23. Hitler and Chamberlain resumed talk, with exchange of letters, at Godesberg. In night conversation which ended early next morning, Hitler prepared memorandum accompanied by map in which he demanded evacuation by Oct. 1 of all Sudeten areas with preponderant German populations, also plebiscites within 60 days in all other Czech areas with German minorities, including three "island" territories. Chamberlain, as he declared later, "bitterly reproached the chancellor," but agreed to convey ultimatum to Czech gov't. ¶ U.S.S.R. notified Warsaw it would denounce its nonaggression treaty with Poland if latter nation invaded Czech territory. ¶ Daladier declared France would march to Czechoslovakia's aid if Germany resorted to arms to enforce Godesberg demands.

24. Rumania joined Yugoslavia in Little Entente warning to Hungary against violation of Czech border. ¶ J. Donald Budge won U.S. national lawn tennis championship and became only player in history to win all four major tennis titles of the world in single year; Alice Marble won women's championship.

25. Hitler's ultimatum of Sept. 23 rejected unconditionally by Czech gov't.

26. Hitler excoriated Czechoslovakia as a nation founded upon a "lie" and a "swindle," said he would brook no more delay in settlement of Sudeten crisis, and declared that Sudetenland was his last territorial claim in Europe. J British cabinet made first definite commitment of military aid to Czechoslovakia and France in case of German invasion of Sudetenland.

27. New German ultimatum demanded Czech evacuation of Sudetenland by 2 p.m., Sept. 28. ¶ Second note by Roosevelt sent to Hitler after latter had replied to first note and disclaimed all responsibility for imminent war. Roosevelt also dispatched personal message to Mussolini, urging him to intervene with Hitler. ¶ Entire British navy ordered to mobilize. King George declared a state of emergency. ¶ Queen Elizabeth christened 85,000-ton liner bearing her name.

28. Hitler suddenly called Four-Power conference, shortly before German ultimatum was about to expire at 2 p.m.

29. Hitler, Daladier, Mussolini and Chamberlain met at Munich; they drafted agreement which provided for German occupation of Sudetenland between Oct. 1 and Oct. 10, for plebiscites before Nov. 30 in other areas as determined by international commission of the Four Powers, and for new conference in case of dispute over Polish and Hungarian minorities territory. In annex to agreement, Britain and France guaranteed new boundaries of Czechoslovakia against "unprovoked" aggression.

30. League of Nations council voted that sanctions under articles XVI and XVII of covenant were applicable against Japan. ¶ Munich pact signed by Four Powers. Chamberlain and Hitler later issued joint communiqué in which they characterized pact as "symbolic of the desire of our two peoples never to go to war with one another again." ¶ Czech cabinet accepted provisions of Munich pact. ¶ Polish ultimatum demanded that Czechs evacuate Teschen district by noon Oct. 1. ¶ Fall of Tienchiachen, key fortification in defense of Hankow, admitted by Chinese gov't.

OCTOBER, 1938

1. German troops crossed Czech border near Aigen to begin occupation. Henlein appointed commissioner of Sudetenland. ¶ Czechoslovakia yielded to Poland's Teschen ultimatum.

2. Czech gov't agreed to negotiate Hungarian demands for cession of territory. ¶ Polish troops occupied Teschen.

3. British gov't instructed Bank of England to loan Czechoslovakia £10,000,000. ¶ Japan threatened "countermeasures" against any nation which adopted sanctions in accordance with League report of Sept. 30. ¶ Hitler made triumphal entry into Sudetenland.

4. Premier Syrovy reshuffled Czech cabinet; Frantisek Chvalkovsky, minister to Italy, named foreign minister.

5. Eduard Benes resigned as president of Czechoslovakia. ¶ Emergency economic and financial powers granted Premier Daladier by French chamber of deputies, 331 to 78, and by senate, 286 to 4. Earlier the chamber had approved Daladier's part in Munich accord, 535 to 75. ¶ Hungarian troops invaded two Czech border towns. ¶ British troops and planes killed 80 Arabs in renewed Palestine fighting near Safed and Mount Tabor.

6. House of commons voted approval of Chamberlain's peace policy, 366 to 144. ¶ Slovakia was granted complete autonomy, except in foreign relations, national defense, and national fiscal policy, by Czech gov't.

7. U.S. state dep't made public text of note delivered to Italian gov't Oct. 5 which asked exemption of American Jews from anti-Semitic decrees and implied retaliation in case request was not recognized. § Germany granted circlit of 150,000,000 marks to Turkey for "industrial and military equipment."

8. Italian chamber of deputies officially abolished, to be replaced by chamber of fasces and guilds. ¶ Gen. Franco announced immediate withdrawal of 12,000 Italian troops from Insurgent army. ¶ Nazi mob attacked and partially destroyed Vienna palace of Cardinal Innitzer, who was slightly injured.

9. New York Yankees defeated "Gabby" Hartnett's Chicago Cubs in fourth straight game (scores, 3-1, 6-3, 5-2, 8-3) to win world baseball championship. ¶ Hitler, in Saarbrucken speech, announced demobilization of reservists but continued construction of fortifications on western border; he criticized Britain's "governess-like"

guardianship of Germany." ¶ Czechs, represented by new autonomous state of Slovakia, met at conference with Hungarians in Komarom (Komarno); Slovaks agreed to cede two towns and to discharge Hungarian troops. ¶ Chinese claimed overwhelming victory near Tei-an.

10. 11 soviet aviators denounced Col. Charles A. Lindbergh as a "mercenary liar" who slandered the Russian air force as vastly inferior in order "to provide Chamberlain with an argument in favour of capitulation in Munich." ¶ U.S. supreme court, with Justices Black and Reed dissenting, denied plea for reviewing case of Thomas J. Mooney, convicted for alleged participation in 1916 bombing. ¶ Paraguay-Bolivia boundary in Chaco fixed by arbitral award of presidents of six American nations.

11. Henry Ford conferred with Homer Martin, president of United Automobile Workers, for first time; Martin later presented proposal for 32-hr. week in Ford plants.

12. Japanese landed 40,000 troops at Hachung in Bias bay, about 35 mi. from Hong Kong, to begin offensive in south China. ¶ French cabinet confirmed appointment of André François-Poncet as ambassador to "the King of Italy . . . and emperor of Ethiopia" and thus in effect recognized Italian sovereignty over Ethiopia.

13. Hungary broke off negotiations with Czechoslovakia at Komarom and asked mediation by Munich pact signatories. ¶ William Green re-elected president of American Federation of Labor for 14th consecutive term.

15. Brazil and Germany again recalled their ambassadors.

16. Winston Churchill, in reply to Hitler's attack upon him, repeated his denunciation of the Munich pact and called for an alliance of Great Britain and the U.S.A.

18. Martial law proclaimed in all Palestine as British troops laid siege to Jerusalem; Grand Mufti of Jerusalem demanded abandonment of Balfour declaration as price for Arab peace. § General Motors corporation ordered 35,000 back to work and restored salary cut of 30,000 other workers.

19. British troops defeated Arab rebels in Jerusalem and occupied city.

21. Canton fell to Japanese troops without opposition after reported "sellout" by Chinese military authorities.

22. Pres. Cárdenas of Mexico offered British and American oil companies full indemnity for land expropriations.

23. U.S. gunboats ignored Japanese warning to leave Hankow; British patrol ship "Sandpiper" hit by bombs at Chang-sha.

24. Fair labor standards act went into effect; all pecanshelling factories in south closed because of inability to comply with new law.

26. Japanese captured Hankow; Chinese gov't officials, civilians of the Wu-Han cities, and main body of Chinese troops escaped toward west and southwest. ¶ Libya raised from colonial status to part of Italy proper by decree of fascist grand council. ¶ Japanese storm troops captured Tei-an, key defense city of central China.

27. Federal court decision enjoined Mayor Frank Hague of Jersey City from interfering with right of C.I.O. to organize. ¶ Earl Stanhope appointed British first lord of admiralty to succeed Alfred Duff Cooper, Earl De La Warr became president of board of education.

28. Thousands of Polish Jews in Germany seized and deported a few hours before new law barring re-entry became effective in Poland; the nazi order was later revoked partially.

29. Return of all German colonies demanded by Gen. Franz von Epp, director of nazi party's colonial policy office.

30. Radio dramatization of H. G. Wells' War of the Worlds terrorized thousands of U.S. listeners who believed the description of a Martian invasion factual.

31. Gen. Ludwig Beck resigned as chief of German general staff after reported rift with nazi leaders during Sudeten crisis; he was succeeded by Gen. Franz Halder. ¶ Sir John Anderson appointed British lord privy seal, in charge of civilian defenses; Colonial Sec'y Malcolm MacDonald assumed second cabinet post as Dominions sec'y; Viscount Runciman named lord president of the council.

NOVEMBER, 1938

2. German-Italian arbitration committee at Vienna awarded Hungary a strip of Czech territory with area of approximately 5,000 sq.mi. along southern border of Slovakia; Hungary and Czechoslovakia accepted the award. ¶ Anglo-Italian treaty of friendship approved by house of commons, 345 to 138.

4. Observance of open door policy and Nine-Power treaty of 1921-22 demanded of all adhering powers, in-

cluding Japan, by Sec'y of State Hull.

6. Admiral Nicholas Horthy led Hungarian troops into Komarom to begin occupation of territory ceded by Czechoslovakia.

7. Two royal air force planes broke world's non-stop distance record by flying 7,162 miles from Ismailia, Egypt, to Fanny bay, near Darwin, Australia.

8. Republicans gained 81 representatives, 8 senators, and 11 governors in national elections. ¶ Hitler in Munich speech said Germany would secure its lost colonies "in a different way" if France and Great Britain refused to negotiate his request for their return to the reich.

Carlos Quintanilla assumed presidency of Bolivia after suicide of Pres. German Busch. § New world's automobile speed record of 368.85 m.p.h. established by John Cobb at Bonneville salt flats, Utah.

24. Nazi-soviet nonaggression pact signed in Moscow. I British parliament passed emergency powers bill for government to rule by decree; Chamberlain declared war imminent but still hoped for "a way out." I Roosevelt appealed to Hitler and President Moscicki of Poland to settle their controversies by direct negotiation, arbitration, or conciliation; in another message, he urged King Victor Emmanuel of Italy to intervene on behalf of peace. I Albert Forster elected head of gov't of Danzig to replace Arthur Greiser. I Louis Lepke, object of nation-wide manhunt surrendered to federal agents in New York city. I George L. Carpenter elected general of Salvation Army to succeed Evangeline Booth.

25. Hitler requested conference with Sir Nevile Henderson and, according to British White Paper of Sept. 1, told British ambassador he was "determined to abolish Macedonian conditions in Poland." ¶ Poland and Great Britain signed five-year military alliance in London. ¶ Pres. Moscicki of Poland replied to Pres. Roosevelt that his nation stood ready to negotiate directly with Germany; Roosevelt then addressed second message to Hitler asking him to adopt pacific settlement also. ¶ Japanese ambassador to Berlin ordered to file protest with German gov't against signing of nazi-soviet pact. ¶ Martial law proclaimed in Chile after abortive military revolt.

26. Sir Nevile Henderson flew to London to present Hitler's verbal message of Aug. 25 at cabinet meeting. ¶ Serbo-Croat accord granted Croatia separate parliament and established freedom of press and assembly in Yugoslavia. ¶ British and French military missions left Moscow. ¶ Rationing of food and clothing decreed throughout Germany; nazis cancelled Nürnberg party congress. ¶ Germany's ministers to Switzerland and the Netherlands and its ambassador to Belgium assured these countries that the reich would respect their neutrality in general war. ¶ Hungary rejected Rumania's proposal for nonaggression pact but offered to negotiate treaty.

27. Hitler, in reply to letter of Aug. 26 from Daladier which suggested direct negotiations between Berlin and Warsaw, demanded return of both Danzig and the Polish Corridor.

28. British cabinet completed reply to Hitler's communications of Aug. 23 and 25; as published in British White Paper of Sept. 1, this note requested direct negotiations between Germany and Poland and offered to discuss Hitler's proposal for a "general understanding" regarding the British empire after the differences between Germany and Poland had been peacefully composed. ¶ French-German frontier closed; the Netherlands mobilized; Switzerland and Belgium called up more troops. ¶ Bratislava occupied by German troops. ¶ German liner "Bremen" detained and searched for offensive weapons in New York harbour; it did not sail until Aug. 30. ¶ Gen. Nobuyuki Abe appointed Japanese premier after resignation of Kiichiro Hiranuma's cabinet. ¶ British merchant ships ordered by admiralty to leave Mediterranean and Baltic.

29. Hitler's reply to British message of Aug. 28 telephoned to London; as reported in the British White Paper of Sept. 1, it accepted British proposal for direct discus-

sions providing a Polish emissary "with full powers" should arrive at Berlin Aug. 30; Hitler denied this was an ultimatum. ¶ Poland protested German military occupation of Slovakia. ¶ Belgium and the Netherlands offered to mediate for France, Great Britain, Germany, Poland and Italy. ¶ Rationing of food and partial evacuation of larger cities ordered by Mussolini. ¶ Ivan Subovitch took office as first governor of Croatia. ¶ Pres. Roosevelt repeated his belief that failure of congress to modify U.S. neutrality act had encouraged Hitler. ¶ Gen. Shunroko Hata named minister of war in new Japanese cabinet; Premier Abe took over portfolio of foreign affairs.

30. Another message to Hitler drafted by British cabinet and delivered shortly before midnight; British White Paper of Sept. 1 revealed that note expressed willingness to initiate Polish-German discussions at earliest practicable date; in reply, German Foreign Minister von Ribbentrop read to Sir Nevile Henderson the text of 16-point proposal published in Berlin the next day. ¶ Hitler established defense council of six headed by Goering. ¶ Poland speeded up mobilization to include all qualified men between 21 and 40. ¶ German military rule proclaimed in Slovakia by Premier Josef Tiso.

31. 16-point "peace plan" published by Hitler suggested return of Danzig to Germany, retention of Gdynia by Poland, plebiscite in Polish Corridor to be held after a year, and extraterritorial communications zone through Corridor for whichever nation lost plebiscite; Polish gov't, though it did not receive formal text, pronounced the terms of the proposal unacceptable. ¶ British fleet, army and air force placed on war footing. ¶ Soviet-German pact ratified by supreme soviet; Premier Molotov said proposed mutual assistance pact with Great Britain and France had been dropped because Britain had supported Poland's objections to soviet troops on Polish soil. ¶ Slovakia demanded that Poland return Teschen area occupied after pact of Munich.

SEPTEMBER, 1939

1. Germany began invasion of Poland at 5:45 A.M. on four fronts after proclamation to army by Hitler. ¶ British-French ultimatums to Germany demanded suspension of aggressive action in Poland and withdrawal of all forces. ¶ Hitler, in address to reichstag, said Germany had "returned fire" because Poland had mobilized instead of sending emissary to discuss his proposals; he named Goering as his successor and Rudolf Hess as next in line in case "something happens to me." ¶ Danzig accepted as part of reich after Albert Forster proclaimed its reunion with Germany. ¶ Italian official communiqué stated "Italy will take no initiative whatever toward the military operations."

2. Britain and France conferred upon expiration date for joint ultimatums to Germany. ¶ Germany reported important advances in Polish Corridor and Upper Silesia. ¶ French chamber of deputies voted Daladier authority to declare war and adopted war budget of 69,000,000,000 francs; final mobilization began. ¶ Eire approved declaration of neutrality. ¶ Ernest H. Gruening appointed governor of Alaska. ¶ New perfusion pump to keep different types of animal tissue alive at same time announced by Col. Charles A. Lindbergh.

3. Great Britain declared war on Germany at 11 A.M. after setting time limit to ultimatum of Sept. 1; France entered conflict officially six hours later. ¶ British liner "Athenia," bound for Montreal, with 1,418 aboard, torpedoed 200 mi. west of the Hebrides; it sank next day;

Americans. ¶ Hitler left Berlin to join army on eastern front. ¶ Winston Churchill entered British war cabinet as first lord of the admiralty; Anthony Eden was named secretary for the dominions, without seat in cabinet, and Lord Hankey minister without portfolio; Viscount Gort appointed commander in chief of British field forces. ¶ President Roosevelt declared that every effort of his administration would be directed toward maintaining true neutrality. ¶ King George VI, in message broadcast throughout world,

total loss of life was announced later as 112, including 30

¶ King George VI, in message broadcast throughout world, asked British subjects everywhere to "make our cause their own." ¶ Australia and New Zealand announced state of war with Germany.

4. First French war communiqué announced that operations by land, sea and air had begun against Germany. § British planes bombed German fleet at Wilhelmshaven and at western entrance to Kiel canal. § Loss of Bydgoszcz (Bromberg) and Grudziadz, strategic cities of corridor, admitted by Polish general staff; Germany announced that northern corridor was completely cut off. § Gen. Franco decreed "the strictest neutrality on the part of Spanish subjects"; Yugoslavia, Bulgaria and Rumania officially proclaimed their neutrality; statement of Japanese cabinet said nation "does not intend to be involved in it."

5. Neutrality of U.S.A. proclaimed in two declarations: first was issued in accordance with international law; second was issued under terms of neutrality act of 1937 and prohibited export or transshipment of arms to belligerents. ¶ Removal of Polish capital from Warsaw to Lublin re-

Number 10 Downing street, on the morning of Sept. 3, 1939, where crowds dispersed quietly as the first air raid sounded immediately following Great Britain's declaration of war

ported as German army intensified drive on four fronts and announced virtual control of Upper Silesia. § Prime Minister Hertzog of South Africa resigned after parliament voted to sever diplomatic relations with Germany. ¶ Stocks rose 1 to 27 points in heavy trade on New York Stock Exchange. ¶ France and Poland signed protocol to treaty of alliance which prohibited either from signing separate armistice or treaty of peace.

6. Cracow occupied by Germans, who also announced capture of Kielce. ¶ French troops advanced into western Germany at several points, according to army communique which also announced debarkation of British troops in France. ¶ Union of South Africa declared war against Germany; Gen. Jan Christiaan Smuts formed war cabinet ¶ Eduard Benes and other former Czech leaders offered to form Czech legion to fight for Allies. ¶ Great Britain suspended London naval treaty of 1936 and separate naval treaties with Poland and U.S.S.R. ¶ American naval patrols established in Atlantic and Caribbean, to survey movements of belligerent fleets. ¶ Liner "Bremen" reported by Berlin safe in unidentified neutral port, later revealed as Murmansk, U.S.S.R. ¶ Iraq requested German minister to leave Baghdad.

7. Polish garrison of 77 men at Westerplatte fortress in Danzig harbour surrendered after six-day siege; German army continued "pincer" drives toward Lodz, Poznan and suburbs of Warsaw. § Fgypt officially notified Great Brit

- 8. German army advanced to outskirts of Warsaw. ¶ Limited national emergency declared by Pres. Roosevelt, who ordered increases in enlisted strength of all U.S. armed forces. ¶ Contraband bases for search of vessels established by Great Britain at Gibraltar, Kirkwall in the Orkneys, Weymouth, North Foreland and Haifa.
- 9. Field Marshal Goering declared in Berlin speech that Germany wanted nothing from France and accused England of scheming to "fight till the last Frenchman." ¶ Fall of Lodz announced by Germans.
- 10. Repulse of attack on Warsaw attributed by Germans to civilian sniping; removal of Polish capital from Lublin to Lwow reported. ¶ Canada declared war against Germany.
- 11. Poles and Germans met in fierce battle in Poznan and Lodz regions, at Warsaw, and along 250-mi. front from East Prussia to Slovakian border; Germans extended southern salient toward Lwow (Lemberg). ¶ Canadian parliament voted to appropriate initial war fund of \$100,000,000 and defeated motion to prohibit expeditionary force to Europe.
- 12. Chamberlain flew to undisclosed town in northern France to attend first meeting of Allies' supreme war council. ¶ Virtual encirclement of Warsaw reported by Germans after they had severed Warsaw-Bialystok railroad; fall of Poznan announced. ¶ Duke and duchess of Windsor's return to England, after three-year exile, announced in London.
- 13. Daladier took over foreign ministry in modification of French cabinet, transferred Georges Bonnet to ministry of justice, and created new ministry of armaments headed by Raoul Dautry. ¶ German troops pushed toward outskirts of Lwow and extended drive from East Prussia toward Brest-Litovsk. ¶ U.S. submarine "Squalus," sunk off Atlantic coast since May 23, towed to navy yard at Portsmouth, New Hampshire; 25 of its 26 dead were removed in next two days.
- 14. Gdynia surrendered after two-week siege; encirclement of Warsaw reported complete; removal of Polish capital to Zaleszczyki, on Rumanian frontier, announced in Berlin.
- 15. U.S.S.R. and Japan agreed upon truce, effective Sept. 16, to end hostilities on Manchurian and Mongolian frontiers. ¶ Germans advanced to outer fortifications of Brest-Litovsk and continued drives east of San river. ¶ Australian Prime Minister R. G. Menzies formed war cabinet of six members and announced new taxes to meet costs of war. ¶ Col. Charles A. Lindbergh, in first formal speech after 1931, broadcast appeal to Americans not to become involved in war. ¶ Loring Christie appointed Canadian ambassador to U.S.A.
- 16. German high command issued ultimatums that Warsaw either surrendor or evacuate its civilians; or otherwise suffer unrestricted bombardment; the command was unanswered; fall of Bialystok and Kutno announced in Berlin.
- 17. Soviet troops invaded eastern Poland along length of frontier after notifying Poland and assuring all powers with whom it maintained diplomatic relations that it nevertheless intended to pursue a policy of neutrality. § British aircraft carrier "Courageous" sunk by German submarine. § Capture of Brest-Litovsk announced after severe battle; thousands of Polish troops and refugees fled across Rumanian border. § Pres. Moscicki signed proclamation that Polish gov't would function "with full authority" in foreign country.
 - 18. Russian and German forces met at Brest-Litovsk,

- according to Berlin report; joint commission met to set up limits of occupation for each army; attack on Warsaw resumed; Germans announced capture of rich oil regions of Ukraine, where Russia also advanced westward to Stanislawow. ¶ Polish gov't fled country; Pres. Moscicki, Foreign Minister Beck and Marshal Smigly-Rydz arrived at Cernauti, Rumania. ¶ Premiers and foreign ministers of Denmark, Finland, Norway and Sweden met at Copenhagen to outline program of neutrality.
- 19. Hitler at Danzig repeated he had no claims against France and Great Britain, but declared Germany and Russia had agreed that "Poland will never rise again in the form of the Versailles treaty." ¶ Russian troops occupied Vilna and continued advances in White Russia and Ukraine.
- 20. Complete elimination of Poznan-Kutno pocket after furious nine-day battle announced by German high command; Berlin also announced arrival of Gen. von Brauchitsch, commander in chief of army, at western front and transfer of many divisions from Poland to Westwall. ¶ Rumanian gov't announced Marshal Smigly-Rydz would be interned for duration of World War II.
- 21. Repeal of U.S. arms embargo asked by Pres. Roosevelt in message to special session of congress; he said he regretted having signed neutrality act of 1937. ¶ Iron Guard assassins of Rumanian Premier Calinescu were executed on the site, and new temporary cabinet of Gen. George Argesanu ordered execution or imprisonment of hundreds of other Iron Guardists during next two days. ¶ Russian troops announced occupation of Lwow after withdrawal of German besiegers, but Germany claimed capture of city Sept. 22.
- 22. Frontier areas reported partially flooded by Belgium and the Netherlands as experimental precaution against German invasion. ¶ All elections in Great Britain suspended for duration of war.
- 23. Conquest of Poland completed, declared German high command; Poles continued organized resistance at Warsaw and Modlin, and on Hela peninsula. ¶ Mussolini reaffirmed Italy's neutrality, in his first speech after May 20; he said that since the Allies had not declared war on Russia they should also face "the German fait accompli" in Poland. ¶ Pan-American conference on neutrality convened at Panama city. ¶ Recapture of Kaoan claimed by Chinese. ¶ War appropriations up to 15,000,000,000 marks decreed by German defense council. ¶ Hungary resumed diplomatic relations with U.S.S.R., ruptured since Feb. 2. ¶ Adm. Kichisaburo Nomura appointed Japanese foreign minister.
- 24. Half of Warsaw in flames and 1,000 civilians killed after intense 24-hr. bombardment, according to Polish dispatches. ¶ Major Japanese offensive in Kiang-si and Hunan provinces along 70-mi. front announced in Tokyo.
- 25. Soviet troops concentrated on Estonian border as Foreign Minister Karl Selter returned to Tallinn after hurried conference in Moscow.
- 26. French Communist party dissolved by decree of cabinet. ¶ Removal of all known communists from U.S. governmental positions had been ordered by administration, according to Rep. Martin Dies (Dem., Tex.). ¶ Disbandment of War Resources board announced by Pres. Roosevelt.
- 27. Warsaw surrendered unconditionally after 20 days of siege; German troops began occupation of city Oct. 1. ¶ Basic rate of British income tax raised to 37.5%—highest in history—for 1940–41 fiscal year, to meet £2,000,000,

ooo war budget. ¶ Col. Gen. von Rundstedt named military administrator of German occupation in Poland; Hans Frank appointed civil administrator.

28. Constantine Argetoianu appointed Rumanian premier to succeed Gen. Argesanu, temporary head of gov't after assassination of Premier Calinescu Sept. 21. ¶ Polish fortress at Modlin, near Warsaw, surrendered unconditionally. ¶ Independence of India at end of World War II demanded by Gandhi. ¶ Raymond J. Kelly of Detroit elected national commander of American Legion. ¶ Acceptance of Lhamo Dhondup, five-year-old Chinese boy, as 14th dalai lama of Tibet after meeting of secret council in Lhasa; he was later named Lingerh Lamutanchu.

29. Russo-German frontier agreement signed in Moscow; protocol statement declared both nations would try to persuade England and France to make peace with Germany, but would consult on "necessary measures" if Allies refused. ¶ Estonia concluded treaty of "mutual assistance" with U.S.S.R. which permitted soviets to establish naval and air bases on Dagoe (Hiiu Maa) and Oesel (Saare Maa) islands and at port of Paldiski, also to maintain troops on Estonian soil; pact was ratified at Tallinn Oct. 4. ¶ William Z. Foster, chairman of U.S. Communist party, declared party would not support U.S.A. if it entered war on side of Allies. ¶ Dissolved Communist party of France reorganized and adopted new name—French Workers and Peasants group.

30. Ignace Moscicki resigned as president of Poland in favour of Wladislaw Raczkiewicz; Gen. Wladislaw Sikorski named premier of gov't, resident in France. ¶ Permanent Pan-American advisory committee of 21 established at Panama city, to sit in Washington for duration of war.

OCTOBER, 1939

- 1. Winston Churchill condoned Russia's actions in Poland and Baltic states as necessary to its "national interest"; he praised the "great and friendly nation of Italy." ¶ Conscription of 250,000 new troops between 21 and 22 ordered by British royal proclamation. ¶ Last regular centre of Polish military resistance disappeared with surrender of troops on Hela peninsula. ¶ Chinese troops captured Japanese positions along Hong Kong border in surprise attack.
- 2. U.S.A. would withhold recognition of Polish conquest and continue relations with new Polish gov't in France, declared Sec'y of State Hull. ¶ Safety zone with average width of 300 mi. around all coasts of western hemisphere except those of Canada and European possessions proclaimed by 21 republics in Declaration of Panama. ¶ U.S. merchant vessels must submit to halt and search, Berlin notified Washington.
- 3. Conference of 21 American republics closed at Panama city. ¶ Japanese war office admitted casualties of 18,000 killed, wounded and sick during border conflicts with Russia between May 11 and Sept. 16.
- 4. American merchantmen warned by Sec'y of State Hull to avoid sea routes near belligerent nations. ¶ French infantrymen occupied Borg forest east of Moselle river after tank battle. ¶ Committee of British dominion cabinet ministers to sit in London and co-ordinate war plans announced by Anthony Eden.
- 5. Latvia granted U.S.S.R. right to establish naval and air bases at Liepaja (Libau) and Ventspils (Windau) and to fortify Latvian coast; treaty of mutual assistance signed at Moscow. ¶ Pres. Roosevelt made public a warning from German Grand Admiral Raeder that U.S. passenger ship

- "Iroquois" would be sunk near American coast, presumably by Allies; the "Iroquois" docked safely at New York city Oct. 11. ¶ Grover C. Bergdoll, U.S. draft evader, sentenced to three additional years in prison.
- 6. Hitler, in address to reichstag, asked for "unconditionally guaranteed peace" but declared "this statement will have been my last"; he announced German casualties in Poland were 10,572 killed, 30,322 wounded, 3,404 missing. ¶ Chungking celebrated defeat of Japanese in vicinity of Changsha as "biggest victory of war"; Japanese later conceded defeat.
- 7. Repatriation program for Germans in Baltic states initiated by reich's ministers to Latvia and Estonia. ¶ Finland called up additional reservists as U.S.S.R. issued invitation for conference at Moscow.
- 8. Japanese entered Shekki, on delta of Canton river. ¶ New York Yankees defeated Cincinnati Reds in fourth straight game (2-1, 4-0, 7-3, 7-4) to win baseball world's series
- 9. Finland continued to mass troops on eastern border as its representative, Juhu Paasikivi, entrained for Moscow.
- 10. Third Baltic pact, with Lithuania, concluded at Moscow; U.S.S.R. ceded Vilna in exchange for practically unlimited rights to establish military bases on Lithuanian soil: Lithuania ratified pact Oct. 14. ¶ Civilian evacuation of Helsinki and Viborg and mobilization of fleet ordered by Finnish gov't.
- 11. Anglo-Soviet trade treaty concluded; it provided for exchange of Russian timber for British rubber and tin. ¶ Pres. Roosevelt dispatched personal note to Pres. Kalinin, urging U.S.S.R. not to disrupt its friendly relations with Finland.
- 12. William Green re-elected unanimously for 15th consecutive term as president of A.F. of L.
- 14. British battleship "Royal Oak" sunk at Scapa Flow by German submarine which penetrated defenses of bay.
 - 15. Soviet warships anchored in Tallinn bay.
- 16. Nazi planes raided British naval base at Rosyth on Firth of Forth. ¶ Madrid restored as capital of Spain.
- 17. Russo-Turkish negotiations broke down; Turkish Foreign Minister Saracoglu left for Ankara Oct. 18. ¶ Scapa Flow raided twice by nazi planes. ¶ Pres. Kalinin's reply of Oct. 16 to Pres. Roosevelt's message of Oct. 11 revealed in Washington; note described Russian negotiations with Finland as entirely friendly. ¶ Elmer F. Andrews resigned as U.S. wages and hours administrator; he was succeeded by Col. Philip Fleming.
- 18. Kings of Sweden, Norway and Denmark and Pres. Kyösti Kallió of Finland opened four-power conference at Stockholm to consult on possible concerted action in case of Russian invasion of Finland. ¶ Belligerent submarines barred from U.S. ports and territorial waters by proclamation of Pres. Roosevelt. ¶ Dominion status for India by gradual constitutional steps after war described by Viceroy Linlithgow as British objective.
- 19. Allied-Turkish pact of mutual assistance signed at Ankara; protocol specified that Turkey should not be obliged to fight Russia. § Formal annexation of 20,000 sq.mi. of Polish territory taken from Germany by treaty of Versailles announced in Berlin; decree was signed Oct. 8, effective Nov. 1. § U.S. Ambassador Joseph C. Grew, in speech at Tokyo, sharply criticized Japanese infringements of U.S. rights in China.
- 20. Polish gov't in France announced protest to Lithuania against annexation of Vilna. ¶ Japanese fliers completed round-the-world flight at Tokyo.
 - 21. Editorial in Izvestia of Moscow declared Allied-

- Turkish pact had "serious political significance" and warned against attempts to drive a wedge between Germany and U.S.S.R. ¶ German planes made first attack on British convoy in North sea.
- 22. Withdrawal of French troops from all but scattered posts in German territory reported in Paris. ¶ India congress ordered eight provincial ministries to resign as protest against Britain's policy of postponing grant of dominion status.
- 23. Seizure of U.S. ship "City of Flint" as contraband carrier by German crew on Oct. 9 announced; Germans took vessel with crew of 41 to Tromsoe, Norway, Oct. 20, then to Murmansk, U.S.S.R.
- 24. "Germany will now fight to the finish," asserted German Foreign Minister von Ribbentrop at Danzig. ¶ Minimum U.S. wages in interstate industry raised to 30 cents per hour and maximum working hours per week without overtime pay lowered to 42; approximately 700,000 workers were affected.
- 25. Gov't of Premier Duplessis of Quebec, opponent of conscription, defeated by Liberals in landslide vote.
- 26. Russia notified London that it would not recognize validity of British contraband list. ¶ German pocket battleship "Deutschland" had elu¶ed British blockade to raid shipping in Atlantic, Prime Minister Chamberlain disclosed in house of commons; raiding by "Admiral Scheer" in Atlantic admitted by naval authorities next day. ¶ Release of "City of Flint" demanded of U.S.S.R. by U.S. state dept. ¶ Josef Tiso elected first president of Slovak republic.
- 27. Soviet rule for western Ukraine approved unanimously by assembly at Lwow. ¶ Lithuanian troops began occupation of Vilna.
- 28. "City of Flint" left Murmansk, manned by German crew.
- 29. Soviet troops entered Latvia to occupy military and naval posts.
- 30. Mixed claims commission awarded U.S. litigants \$50,000,000 for damages in Black Tom and Kingsland explosions. ¶ Winnie Ruth Judd, escaped murderess, captured at Phoenix, Ariz.
- 31. New foreign policy of U.S.S.R. outlined by Premier-Foreign Minister Molotov at extraordinary session of supreme soviet; he accused Allies of prolonging war, defended Russian invasion of Poland, deplored the "experience of Versailles," berated the U.S. gov't for intervening in Finnish negotiations and for supporting repeal of arms embargo, conciliated Japan, and divulged Russia's "proposals" to Finland, viz., islands in the Gulf of Finland, naval base at the entrance to the gulf, and a strip of territory on the Karelian isthmus north of Leningrad in exchange for part of soviet Karelia. ¶ Six Italian cabinet ministers, chiefs of army and air force, and Party Sec'y Achille Starace removed from office by Mussolini; Ettore Muti became new party sec'y, and Marshal Rodolfo Graziani chief of staff of the army. I New York world's fair of 1939 closed with paid admissions of 25,814,953.

NOVEMBER, 1939

- 1. Finland declared it would not accede to "proposals" set forth in V. Molotov's speech of preceding day. ¶ Admission of Polish western Ukraine into U.S.S.R. voted unanimously by supreme soviet; Polish White Russia was admitted next day.
- 2. Strike against coastwise shipping lines called in New York city
- 3. Molotov's references of Oct. 31 to U.S.A. characterized by President Roosevelt as bad manners.

- 4. Bill repealing U.S. arms embargo and substituting "cash-and-carry" trade with belligerents signed by Pres. Roosevelt; proclamation forbade U.S. ships to enter waters around Great Britain and Deland, English channel, North sea south and west of Beigen, Baltic sea, and Bay of Biscay except northern Spanish coast. ¶ "City of Flint" released to U.S. crew by Norway, which interned German prize crew for entering port of Haugesund without permission; Germany protested to Norwegian gov't; ship sailed to Bergen.
- 5. Marshal Pietro Badoglio reconfirmed as chief of Italian armed forces; increase in Italian army ordered by Mussolini. ¶ Norway rejected nazi demand for return of "City of Flint" and release of prize crew. ¶ Canadian C.I.O. declared complete independence from U.S. parent organization and pledged war aid to dominion.
- 6. A decadent capitalism was responsible for World War II, said V. Molotov.
- 7. King Leopold of Belgium and Queen Wilhelmina addressed another joint offer of mediation to Germany, Britain, and France.
- 8. Apparent attempt to assassinate Hitler and nazi leaders failed when he left Buergerbraeu hall, Munich, with his party shortly before time bomb exploded, wrecking hall and killing eight. ¶ Unsuccessful conspiracy to start revolt in Afghanistan Sept. 7 revealed in India.
- 10. Breakdown of Finnish-Russian parleys announced in Moscow.
- 11. American shipping to Norway resumed.
- 12. Reply of King George VI to Dutch-Belgian offer of mediation in war insisted upon guarantees against recurring German aggression. ¶ Withdrawal of British troops from north China announced in London; France announced similar move Nov. 14.
- 13. German envoys to Belgium and Netherlands instructed to assure two countries that reich intended to respect their neutrality. ¶ Shetland Islands bombed twice by German planes.
- 14. Byrd expedition left Boston on first leg of journey to Antarctica.
- 16. General Motors Corp. and 3 subsidiaries convicted of violating antitrust act; 17 executives of companies were acquitted. ¶ Al Capone, former Chicago gangster, released from prison.
- 17. Nine Czech students executed at Prague for taking part in anti-German riots; three more Czechs were shot next day; University of Prague closed for three years. ¶ Allied Supreme Economic council created in London to co-ordinate Franco-British purchasing, shipping and blockade activities. ¶ Two-week strike of longshoremen in New York city ended. ¶ Capture of Pakhoi in south China announced by Japanese.
- 19. Unrestricted German mine warfare charged by Great Britain. ¶ Hindu-Moslem riots broke out in Sukkur, India.
- 20. Chiang Kai-shek elected president of Chinese executive yuan to succeed H. H. Kung, who became vice-president. ¶ Fritz Thyssen, German industrialist, announced that his opposition to nazis' war policy had obliged him to flee to Switzerland.
- 21. German exports, whether on reich's or neutral ships, would be seized in retaliation for Germany's mine-laying in North sea, announced Prime Minister Chamberlain. ¶ Two British Intelligence Service officers and a German were said by Heinrich Himmler to be instigators of Buergerbraeu explosion Nov. 8; all were arrested within a few hours and the German later confessed crime, said Himmler,

who also accused Otto Strasser, head of anti-nazi Black Front, as brains behind plot.

- 23. British armed merchantman "Rawalpindi" sunk by German pocket battleship "Deutschland" and another warship off Iceland in first naval battle of war. ¶ Sowing of parachuted magnetic mines by German seaplanes in estuary of Thames confirmed by British admiralty. ¶ Premier Argetoianu of Rumania resigned; George Tatarescu formed cabinet next day.
- 24. Plan to cut 1940 deficit by more than half for 1941 fiscal year divulged by Pres. Roosevelt, who also announced likely increase of \$500,000,000 in appropriations for national defense. ¶ Capture of Nanning announced by Japanese army.
- 26. Withdrawal of Finnish troops 20 to 25 km. behind fortified border on Karelian isthmus demanded by U.S.-S.R.; Finland said next day it would agree to proposal only if soviet troops withdrew from border also.
- 27. Order in council for blockade of German exports signed by King George.
- 28. Finnish-Soviet nonaggression pact denounced by U.S.S.R. ¶ Strike of C.I.O. workers at Chrysler plants in Detroit ended after 54 days.
- 29. U.S.S.R. severed diplomatic relations with Finland; United States offered to mediate. ¶ Fritz Kuhn convicted of larceny and forgery; he was sentenced Dec. 5 to 2½-5 years in prison. ¶ Joseph Stalin branded as lie statement attributed to him that World War II "should last as long as possible." ¶ Rumanian Foreign Minister Cafencu rejected Hungarian Foreign Minister Csaky's suggestion that Rumania consider return of Transylvania.
- 30. Russian troops began invasion of Finland shortly after 9 A.M.; Soviets announced capture of Petsamo (Petschenga) and four islands in Gulf of Finland. ¶ Dino Grandi named president of Italian chamber of fasces and corporations.

DECEMBER, 1939

- 1. Finnish Premier Cajander resigned despite vote of confidence and was succeeded by Risto Ryti; new soviet puppet "People's government" set itself up at Terijoki and was recognized by U.S.S.R. ¶ Pres. Roosevelt denounced soviet invasion as wanton and lawless.

- 29. Alexander Korizis appointed Greek premier following death of Gen. John Metaxas.
- 30. British entered Derna, Libya, after unexpected 3-day resistance by Italian defenders. ¶ Adolf Hitler declared that ships of any nationality bringing aid to Britain would be torpedoed; he prophesied that 1941 would see complete axis victory.
- 31. Thai-French armistice signed aboard Japanese cruiser at Saigon.

FEBRUARY, 1941

- 1. Sec'y of Navy Frank Knox told senate foreign relations committee he was "positive" the axis would invade western hemisphere if Britain were overwhelmed.
- 2. Fierce rioting broke out in Johannesburg, South Africa, between soldiers and anti-British demonstrators. § British armies captured Agordat, strategic mountain railroad town in Eritrea, 100 mi. west of Massawa.
- 3. Pres. Batista of Cuba ousted three "seditious" military leaders, assumed command of republic's armed forces and suspended constitutional guarantees for 15 days. ¶ U.S. supreme court upheld constitutionality of Wages and Hours law; in another decision, the court ruled that disputes between unions did not come under the Sherman Antitrust act.
- 4. British army of Nile drove 45 mi. beyond Derna and captured ancient city of Cyrene in Libya. ¶ Wendell Willkie flew to Dublin for a "frank, free discussion" with Eire Prime Minister Eamon de Valera. ¶ Lend-lease bill might involve U.S.A. in war in 90 days, Gen. Robert E. Wood of America First committee told senate foreign relations committee.
- 5. Wendell Willkie left London for U.S.A.; he asked newsmen to "tell the Germans" that "we German-Americans hate tyranny and the nazi regime."
- 6. Pres. Roosevelt named John G. Winant to succeed Joseph P. Kennedy as U.S. ambassador to Great Britain.
- 7. British forces in Africa captured Bengasi, major Italian port in east Libya.
- 8. Lend-lease bill, empowering Pres. Roosevelt to transfer military equipment to Britain, passed in house of representatives by vote of 260 to 165.
- 9. British warships hurled 300 tons of shells into Genoa. ¶ Pierre Etienne Flandin resigned from foreign ministry in Vichy cabinet and was succeeded by Adm. Jean Darlan, who also took over post of vice-premier.
- 10. Great Britain broke off diplomatic relations with Rumania.
- 11. Wendell Willkie, in U.S. after war tour of England, urged U.S. to speed aid to Britain.
- 14. Bill raising the ceiling on U.S. national debt from \$49,000,000,000 to \$65,000,000,000 approved by senate. ¶ British parachute troops landed in southern Italy in at-

tempt to sabotage communications; Rome reported all were captured.

- 15. Pres. Roosevelt dispatched James B. Conant, president of Harvard university, to England on mission to exchange war science data with British.
- 16. Britain in desperate and immediate need of U.S. help, declared Harry Hopkins on return from four-week trip in England.
- 17. Japan, through official spokesman, offered its services to end all wars, and blamed U.S. and Britain for continued conflict. ¶ Bulgaria and Turkey signed nonaggression pact. ¶ Supreme court upheld decision sentencing Earl Browder, general sec'y of U.S. Communist party, to four years in prison for passport fraud.
- 18. Large Australian army landed at Singapore; Canadians advised to leave China and Japan. ¶ U.S. Undersec'y of State Sumner Welles rejected Japan's mediation offer; said United States was more interested in deeds than in words.
- 20. British armies crossed Juba river and penetrated Italian Somaliland.
- 21. Soviets expelled Maxim Litvinov, former foreign commissar, from central committee of Communist party for "inability to discharge obligations."
- 24. Hitler announced in a speech in historic Munich beer-cellar that he was planning a gigantic U-boat war against Britain. ¶ "White race must cede Oceania" to the Japanese, Foreign Minister Yosuke Matsuoka told Japanese diet. ¶ Communist party of U.S. named Robert Minor as general sec'y.
- 25. Pres. Roosevelt placed bans on export of beryllium, graphite electrodes, atropine, belladonna, sole leather and belting leather. ¶ Soviet union approved budget of 215,400,000,000 roubles, a third of which was earmarked for national defense.
- 26. British armies captured Mogadishu, capital of Italian Somaliland, climaxing 220-mi. dash in 48 hr.
- 27. Italy sent Spain a bill for 7,500,000,000 lire for aid given Franco during Spanish Civil War.
- 28. A plan offered by the Office of Production Management ended C.I.O. strike at Bethlehem Steel corporation's Lackawanna plant. ¶ U.S. completed secret removal of \$8,500,000,000 in gold from New York city to subterranean gold vaults at Fort Knox, Ky.

MARCH, 1941

- 1. Bulgaria signed Rome-Berlin-Tokyo pact, permitting German troops to march into Sofia. ¶ German military authorities fined the city of Amsterdam 15,000,000 guilders as a penalty for disorders against nazi occupation.
- 2. Turkey closed Strait of Dardanelles to all ships, except those having special permits.
- 5. Former King Carol of Rumania and Mme. Lupescu fled Spain and crossed frontier into Portugal.
- 6. U.S. requested Italy to close two consulates in U.S. and to restrict the movements of Italian consular agents.
- 7. Italian Somaliland fell to British troops; Italians fled into Ethiopia.
- 8. Senate passed lend-lease bill by vote of 60 to 31. ¶ Rumanian Premier Antonescu gave Hitler, Goering and Mussolini power to veto all Rumanian economic agreements with foreign countries. ¶ Greeks resumed offensive in Albania.
- 10. Marshal Pétain appealed to U.S. for food to ward off famine in France; Vice-Premier Admiral Darlan said French navy would fight if Britain interfered with food convoys. § France, under Japanese pressure, ceded Indo-Chinese territories to Thailand (Siam).

- 12. Prime Minister Churchill thanked the U.S. for enacting the lend-lease bill, which he termed a "new Magna Carta."
- 15. Pres. Roosevelt in radio speech told U.S. that entire nation had to make sacrifices in order to defeat dictatorships.
- 16. No help could save Britain, Chancellor Hitler told audience of nazi leaders.
- 19. Pres. Roosevelt announced creation of 11-man board to mediate strikes involving defense industries. ¶ U.S. and Canada signed pact to develop Great Lakes-St. Lawrence waterway "for defense purposes."
 - 20. Plymouth shattered by nazi air raid.
- 21. Three Yugoslav ministers quit cabinet in protest against gov't's readiness to join axis. ¶ New York bus strike ended after 11 days.
- 22. Grand Coulee dam in Washington started operation, two years ahead of schedule.
- 25. U.S.S.R. and Turkey exchanged neutrality pledges. ¶ Yugoslav Premier Cvetkovitch and foreign minister signed axis pact in Vienna. ¶ Marshal Graziani "retired at his own request" as commander of Italian armies in Libya and as chief of the Italian general staff.
- 26. Yugoslavs revolted against axis pact; heavy police detachments guarded Belgrade.
- 27. Yugoslav army ousted pro-axis government leaders and placed young King Peter II on throne. Gen. Dushan Simovitch, new premier, rushed mobilization of 1,200,000 men. ¶ British troops seized Cheren in Italian Eritrea.
- 28. Bethlehem plant in Johnstown, Pa., and C.I.O. strikers signed agreement to end walkout, while C.I.O. workers at another Bethlehem plant in Cambria, Pa., started new strike.
- 29. British Mediterranean fleet battered Italian naval units off Cape Matapan, Greece, sinking three cruisers and two destroyers and crippling a 35,000-ton battleship.
- 30. U.S. seized 65 axis-controlled ships docked in U.S. ports. ¶ French shore batteries in Algeria fired on British naval units attempting to intercept a French convoy. ¶ C.I.O. strikers voted to return to work at International Harvester plant in Chicago. ¶ German and Italian nationals fled from Belgrade.

APRIL, 1941

- 1. Germans charged Yugoslavs with persecution of German racial minorities. § British forces in Africa captured Asmara, capital of Italian Eritrea.
- 3. Nazi-Italian armoured units in Libya forced British troops to evacuate the port of Bengasi.
- 4. German armies, pouring through Hungary, Rumania and Bulgaria, massed at frontiers adjacent to Yugoslavia and Greece. ¶ Pro-axis leader in Iraq ousted pro-British premier in coup d'état.
 - 5. Aduwa fell to British troops in Ethiopia.
- 6. Nazi armies invaded Yugoslavia and Greece; Hitler denounced Belgrade government for "intriguing" with Britain; U.S.S.R. signed 5-year nonaggression and friend-ship pact with Yugoslavia; nazis bombed Belgrade. ¶ Addis Ababa capitulated to British army in Ethiopia. ¶ U.S. Defense Mediation board won agreement from both management and union to end 75-day Allis-Chalmers strike.
- 7. Royal air force bombed Sofia, Bulgaria; Yugoslavs took Scutari in Albania after launching offensive against Italian forces; Greeks lost Thrace to nazi armoured units. § London severed diplomatic relations with Budapest. § Britain raised basic income tax rate 50% to 10 shillings on the pound. § "Honour" forbade French attack on Brit-

- ish, Marshal Pétain declared in broadcast.
- 8. German army broke through Vardar valley pass, menacing Greek force defending Salonika; nazi forces in Yugoslavia took Skoplje. ¶ Axis forces in North Africa captured Libyan port of Derna; British retreated to Tobruk.
- 9. Nazi army captured Salonika, splitting Greece in two; Yugoslav army pierced Italian line in northern Albania, taking two towns; Nish fell to German troops advancing in Yugoslavia. ¶ British planes bombed heart of Berlin, damaging State Opera house and other buildings. ¶ German and Italian forces in Libya captured six British generals and 2,000 men; British took Massawa, port in Italian Eritrea.
- 10. U.S. revealed agreement with Danish envoy in Washington giving U.S. right to build bases on Greenland. § 80,000 Greek prisoners taken in fighting east of Vardar river valley, German high command announced; Berlin also reported capture of 20,000 Yugoslav prisoners and important gains in Yugoslavia.
- 11. Ten-day Ford strike settled by Governor Van Wagoner of Michigan. ¶ Nazi mechanized units launched attack against Anglo-Greek flank in the Florina area; German troops swept through Yugoslavia and made contact with their Italian allies; Hungarian armies invaded Yugoslavia.
- 12. Italians claimed advance in Yugoslav-Albanian frontier sector; Hungarian army occupied Subotica; U.S.S.R. denounced Hungary for invading Yugoslavia. ¶ Nazi-occupied Denmark declared "void" the agreement signed between U.S. and Danish envoy in Washington.
- 13. Soviet union and Japan signed neutrality pact under which Russia recognized Tokyo's suzerainty over Manchuria while Tokyo pledged to respect the Moscow-dominated Outer Mongolian People's republic. ¶ Nazi mechanized troops occupied Bardia in Libya, driving British forces back across the Egyptian frontier. ¶ Stiff Anglo-Greek resistance slowed German drive in Balkans; nazi troops occupied Belgrade.
- 14. German-Italian motorized forces crossed the Egyptian frontier, taking town of El Sollum. ¶ British troops retired to new defense line in Greece near Mount Olympus; German high command said Yugoslav army was virtually destroyed.
- 15. Nazi army advanced 50 mi. into Greece; Italian forces launched twin offensive on the Greek-Albanian frontier; Hitler and Mussolini gave recognition to new, independent state of Croatia.
- 16. Nazis established new line 60 mi. within Greece; surrender of the second Yugoslav army based at Sarajevo announced by German high command; Greek troops abandoned Kortcha to Italian forces on Albanian front.
- 17. Entire Yugoslav army surrendered; German tank divisions methodically drove back Greece and British armies. ¶ Axis drive eastward along North African coast stalled near Egyptian frontier. ¶ U.S. motorcar industry voluntarily agreed to cut production by 1,000,000 cars, beginning Aug. 1, 1941.
 - 18. Allied armies in Greece retired to new lines.
- 19. Nazi troops captured Mt. Olympus from Australian units. ¶ British landed strong forces in Iraq to guard Mosul oil fields. ¶ Vichy dispatches said 53 French vessels had been "requisitioned," presumably by nazis.
- 21. Emmanuel Tsouderos became Greek premier, succeeding Alexander Korizis, who had committed suicide.
- 22. King George II of Greece fled Athens for Crete as the Greek army of Epirus and Macedonia surrendered to nazis; British held mountain pass at Thermopylae.

- 24. Allied rear-guard troops delayed German forces at Thermopylae pass; nazi bombers pounded Peiraeeus, port of Athens, while German mechanized divisions advanced to within 35 mi. of the Greek capital.
- 25. Immediate extension of U.S. neutrality patrol areas in Atlantic waters was announced by Pres. Roosevelt.
- 26. German panzer units raced across Corinth canal in effort to trap fleeing Allied troops near Athens.
- 27. Increasing U.S. aid would help British empire pass through the "long, stern, scowling valley" of war to victory, Churchill declared in a broadcast to the empire and the U.S. § Nazi mechanized divisions marched into Athens; German forces also occupied Patras on the Peloponnesus.
- 28. British imperial armies continued to evacuate Greece; Berlin claimed destruction of 285,000 tons of British shipping in Greek waters; Italian troops occupied Corfu. ¶ Col. Lindbergh resigned his commission as a reserve officer in the U.S. air corps, declaring that Pres. Roosevelt's remarks questioning his loyalty left him "no honourable alternative." ¶ U.S. supreme court decision ruled that Negroes are entitled to train accommodations equal to those given white passengers. ¶ The 28-day strike of the soft-coal miners in the U.S. ended as coal operators in the southern states agreed to a wage boost of \$1 per day. ¶ The Venezuelan congress elected Gen. Isaias Angarita Medina president of Venezuela.
- 29. Soviet union banned shipment in transit through U.S.S.R. of war materials destined for foreign use.
- 30. British succeeded in evacuating 48,000 of the 60.000 troops originally landed in Greece, Churchill told commons.

MAY, 1941

- 1. U.S. Maritime commission announced plans were underway to shift 50 U.S. oil tankers to the service of Britain. § Lord Beaverbrook was transferred from the ministry of aircraft production and became British minister of state.
- 2. Iraqi artillery shelled the British forces holding the Habbania aerodrome.
- 3. British beat back Iraqi troops in the Basra area while R.A.F. planes bombed Iraqi batteries shelling British gar-

- rison in Habbania airfield. ¶ Italy annexed Ljubljana. capital of Slovenia—a Yugoslav territory—and the area surrounding it.
- 4. Pres. Roosevelt declared the U.S. "ever ready to fight again" for its existence; Hitler boasted that Germany and its allies could defeat "any possible coalition in the world"
- 6. U.S. Sec'y of War Stimson urged the United States to use its navy to escort war supplies to Britain. ¶ Joseph Stalin assumed the premiership of the soviet union following the resignation of Vyacheslav Molotov from that office; Molotov, however, continued in the post of foreign commissar. ¶ The U.S. banned all exports to the soviet union of machinery or equipment needed for U.S. defense production. ¶ Haile Selassie returned to the Ethiopian throne he lost in 1936 to Italian armies.
- 7. House of commons approved Britain's war policy in a 447 to 3 vote of confidence given to Churchill. ¶ British land forces, aided by the R.A.F., succeeded in breaking the siege laid by Iraqi troops around Habbania aerodrome. ¶ German authorities, in a deal with French Vice-Premier Darlan, agreed to cut the cost of military occupation of France by 25%.
 - 8. Axis planes raided the Suez canal zone.
- 9. 300 British planes poured tons of bombs over Hamburg and Bremen. ¶ Soviet Russia withdrew diplomatic recognition from the exiled governments of Yugoslavia, Belgium and Norway.
- 10. 1,443 merchantmen totalling 5,961,044 tons employed in British interests had been sunk since the war began, the admiralty disclosed. ¶ Rudolf Hess, Hitler's personal deputy, flew to Scotland and made a parachute landing near Glasgow; he broke his ankle on landing, was rushed to a hospital and held incommunicado.
- 11. Nazi bombers showered London with 100,000 bombs, destroying house of commons chamber and damaging Westminster abbey, Westminster hall and Egyptian section of the British museum.
- 12. German statement on the flight of Rudolf Hess to Scotland said the nazi leader was suffering from "hallucinations and a mental disease."
- 13. Germans proclaimed the northern part of the Red sea a war zone.

Wreck of the Messerschmitt plane from which Rudolf Hess, Hitler's deputy, made a parachute jump onto Scottish soil after his sensational flight from Germany, May 10, 1941

- 15. Marshal Pétain placed his stamp of approval on Darlan-Hitler talks and appealed to the French people to follow him on the road of "honour and national interest." ¶ Pres. Roosevelt, concerned over Franco-German "collaboration," appealed to the French people not to support the Pétain policy. ¶ U.S. coast guard seized every French vessel, including the "Normandie," in U.S. harbours. ¶ Bolivian gov't decreed expropriation of the Lloyd Aereo Boliviano, a German air line operating in Bolivia. ¶ Completed five months ahead of schedule, the 35,000-ton U.S. battleship "Washington" joined the fleet.
- 16. Key town of El Sollum on the Libyan border was stormed and recaptured by British.
- 17. The axis air forces and the R.A.F. traded blows in the near east, with German planes bombing British positions and British raiders attacking German and Italian concentrations in French-controlled Syria. ¶ The soviet gov't concluded a diplomatic and trade agreement with the new Iraqi gov't.
- 18. The duke of Spoleto, cousin of King Victor Emmanuel III, became king of Croatia.
- 19. Mayor La Guardia was named by Pres. Roosevelt to head Office of Civilian Defense. ¶ Italian force of 7,000 commanded by the duke of Aosta surrendered to British forces in Alagi, Ethiopia.
- 20. The nazis launched an aerial invasion of Crete, landing 7,000 parachute troops from gliders. ¶ British troops seized Feluja, Iraq, 35 mi. west of Baghdad.
- 21. The German foreign office asked the U.S. to withdraw its diplomatic representatives from Paris, the state dep't announced. ¶ A submarine, presumably German, sank the U.S. freighter "Robin Moor" in the South Atlantic.
- 22. Air-borne nazi parachute troops won a foothold on Crete, seizing Candia and Maleme airport and forcing withdrawal of R.A.F. from the island. § British forces in Iraq established new positions only 20 mi. from Baghdad.
- 23. German planes landed reinforcements at Maleme aerodrome as nazi air-borne contingents renewed their drive to oust Allied forces from Crete. ¶ R.A.F. bombers crushed Iraqi counterattack against British at Feluja.
- 24. The "Hood," 42,500-ton British battle cruiser, was blown to bits by the 35,000-ton German battleship "Bismarck" between Greenland and Iceland. ¶ German parachute troops were firmly entrenched in western Crete while nazi bombers continued to blast British warships.
- 25. U.S. convoys aiding Britain would be regarded as a "plain act of war," German Grand Admiral Erich Raeder announced in an interview. ¶ Britain threw a giant naval dragnet around the northeastern Atlantic in the quest for the German battleship "Bismarck." ¶ Narrowly escaping capture, King George of Greece fled Crete for Cairo.
- 26. A new draft of all men who reached 21 after the first registration was ordered by Pres. Roosevelt; it was estimated 1,000,000 youths would be affected. ¶ German forces in Crete drove back British imperial armies to points 15 mi. from Suda bay. ¶ Eire Prime Minister de Valera warned Britain not to apply conscription to Ulster.
- 27. The German battleship "Bismarck" was sunk 400 mi. off the French coast after a running sea battle with British. ¶ Pres. Roosevelt proclaimed an unlimited national emergency to place the U.S. on a war footing. ¶ Churchill abandoned the plan to apply conscription to Northern Ireland to avoid friction with the government of Eire.
- 28. Germany's air-borne army captured Canea, capital of Crete, and pressed drive to oust British warships from Suda bay.

- 29. British armies started to evacuate Crete following nazi seizure of Suda bay and Candia.
- 30. Iraq Premier Rashid Ali fled to Iran as British troops reached the outskirts of Baghdad.
- 31. An armistice was signed in Baghdad between Britain and Iraq, ending month-old war.

JUNE, 1941

- 1. The abandonment of Crete to the axis was admitted by the British war office in an announcement declaring 15,000 troops were safely evacuated from the island.
- 2. Hitler and Mussolini conferred for five hours at the Brenner pass on axis military and political moves. ¶ Charles Evans Hughes retired as chief justice of the U.S. supreme court.
- 4. The R.A.F. bombed Beirut, in preparation for an invasion of the French mandated territories of Syria and Lebanon. ¶ Axis planes staged their first air raid on Alexandria, Egypt, killing an estimated 150 persons and injuring 200 others.
- 6. Rumours that the British were seeking peace were branded by Pres. Roosevelt as falsehoods deliberately circulated by nazis. ¶ Bill authorizing the U.S. to requisition foreign ships lying idle in U.S. harbours was signed by Pres. Roosevelt.
- 8. An Allied force of British and Free French troops invaded Syria from three points.
- 9. Allied forces pushing into Syria neared the key cities of Damascus and Beirut.
- 10. A majority of strikers at the North American Aviation plant voted to return to their jobs. § The U.S. was already in the war, declared Premier Mussolini in a speech to the Italian nation.
- 11. C.I.O. strikers at aluminum plant in Cleveland accepted U.S. Defense Mediation board's plan to resume work on defense orders totalling \$60,000,000. ¶ The massing of nazi troops on soviet frontiers increased tension between the reich and U.S.S.R.
- 12. Harlan Fiske Stone was appointed chief justice of the U.S. supreme court by Pres. Roosevelt; Sen. James F. Byrnes (Dem., S.C.) and Attorney General Robert H. Jackson were named associate justices.
- 14. Pres. Roosevelt ordered immediate freezing of all assets of axis and axis-occupied countries; Japan was not included in the order.
- 15. Italy retaliated for U.S. action in holding axis assets by freezing U.S. funds in Italy.
- 16. Closing of all German consulates, travel and propaganda agencies in the U.S. was ordered by the state department. ¶ Sec'y Ickes banned shipment of 252,000 gal. of lubricating oil bound for Japan.
- 18. Germany and Turkey signed a ten-year friendship treaty.
- 19. Germany and Italy expelled U.S. consuls in reprisal for action closing all axis consulates in the U.S.
- 20. Finland ordered general mobilization. ¶ Ford Motor company signed union shop contract with the United Automobile Workers (C.I.O.).
- 21. Damascus fell to British and Free French forces in Syria.
- 22. German armies launched an invasion of U.S.S.R. on three huge fronts stretching from the Baltic to the Black sea; nazi panzer units penetrated Russian Poland. § British Prime Minister Churchill promised economic and technical support for U.S.S.R.; any state that fought against Hitler would have British aid, he added. § Following the

lead of its axis partner, Italy declared war on U.S.S.R.; Turkey proclaimed its neutrality.

23. German mechanized forces captured Brest-Litovsk.

24. Pres. Roosevelt pledged U.S. to give U.S.S.R. all possible aid and ordered the release of \$40,000,000 in soviet credits frozen June 14.

25. Nazi panzer divisions penetrated soviet lines south of Kaunas and east of Warsaw; Sweden affirmed its neutrality, but announced that permission had been granted for the passage of one nazi division from Norway across Swedish territory to Finland; Pres. Roosevelt announced the neutrality act would not be invoked against Russia.

26. German motorized divisions cracked Russian lines between Grodno and Bialystok to reach lines 50 mi. from Minsk; another panzer force reached the sector between Luck and Brody; Finland entered the war on the side of the nazis in a "defensive capacity," according to Pres. Risto Ryti.

27. Russian troops retreated along a broad sector stretching from Lithuania to the Pripet marshes to prepared positions defending Minsk; Hungary declared war on the soviet union.

28. 4,000 German and Russian tanks engaged in battle in the Luck sector of Russian-held Poland; nazi divisions neared Minsk; Nazi-Finnish forces launched a dual drive aimed at capturing Murmansk and Leningrad.

29. German tank divisions passed beyond Minsk.

¶ Churchill appointed Lord Beaverbrook minister of

supply.

30. Minsk fell to twin German armies converging on the road leading from Borisov to Smolensk; a third nazi army based at Przemysl pierced Ukraine defenses and captured Lwow. § The Vichy gov't severed diplomatic relations with U.S.S.R.

JULY, 1941

- 1. German armies captured Riga; Berlin admitted stiff Russian resistance. ¶ Gen. Sir Archibald Wavell was relieved of the British middle east command and replaced by Gen. Sir Claude Auchinleck; Gen. Wavell took over the India command left by Gen. Auchinleck. ¶ Soviet Russia asked the U.S. for help and offered to pay for war supplies, U.S. state department announced. ¶ Germany and six axis satellites recognized the Japanese-controlled puppet regime in Nanking. ¶ Federal Power commission ordered creation of a 17-state power pool in the southeast U.S.
- 2. The North American Aviation Co. at Inglewood, Calif., taken over by the army on June 9 after a strike closed the plant, was returned to owners.
- 3. Soviet Premier Joseph Stalin exhorted the Russian people to defend their soil by adopting a "scorched earth" policy. ¶ Russian and German panzer units fought for control of the Berezina river in the Bobruisk and Borisov sectors. ¶ Gen. Marshall, U.S. chief of staff, asked for immediate legislation to extend the military service of conscripts and national guardsmen and to permit use of U.S. armed forces beyond the western hemisphere.
 - 4. Red army blunted nazi drive to cross the Berezina.
- 5. Soviet counterattacks checked nazi armoured divisions in the Baltic and White Russian arenas of the Russian front; panzer divisions, far ahead of the nazi main lines, reached outposts of the Stalin line at the Dnieper river, only 300 mi. from Moscow. ¶ R.A.F. units bombed the French "invasion coast" and Rhenish industrial cities for the 21st consecutive day.

- 6. A century-old border wrangle between Peru and Ecuador flared into clashes between border patrols and rival air forces. ¶ Red army took the offensive in the Lepel and Borisov sectors; German panzer divisions were halted at the Dvina river; nazi-Rumanian army was repulsed north of Jassy. ¶ Ten Italian generals and 5,000 Italian troops surrendered to British armies in Ethiopia.
- 7. Occupation of Iceland by U.S. naval and marine units announced to congress by Pres. Roosevelt.
- 8. Nazi war machine was stalled on five principal sectors of the Russian front.
- 9. German mechanized units resumed their drive into U.S.S.R. ¶ Gen. Henri Dentz, commander of the Vichy forces in Syria, was authorized by the Pétain government to ask the British for an armistice.
- 10. Iceland parliament approved by a 39 to 3 vote the Reykjavik government's agreement permitting U.S. armed forces to occupy the island.
- 12. Nazi forces took Vitebsk and crossed the Dvina river, menacing Smolensk. ¶ An armistice to end the war in Syria was concluded between the British and Free French forces and the Vichy command.
- 13. Great Britain and soviet Russia signed a mutual aid pact. ¶ Moscow admitted the loss of 250,000 men, but claimed the nazis had lost 1,000,000.
- 14. Japan closed the port of Kobe to foreigners for a 10-day period.
- 15. German planes blasted a path for tank columns moving on Leningrad; a nazi force swept to within 100 mi. of the northern metropolis; Russian counterdrives pushed back German armies along the Dnieper river. ¶ 33 persons were indicted in a federal court in Brooklyn on charges of acting as German espionage agents. ¶ Churchill told commons that the Soviet-British mutual aid pact meant that "the Russian people are now our allies."
- 16. German high command claimed capture of Smolensk, 230 mi. from Moscow; Russian forces checked nazi units in the Bobruisk and Novograd Volynsk sectors; Russian air fleet bombed Ploesti oil fields in Rumania. ¶ Cabinet of Prince Fumimaro Konoye in Tokyo resigned.
- 17. Pres. Roosevelt issued a black-list order freezing funds in the U.S. of 1,800 Latin-American firms having axis ties. § The second draft lottery to determine the order in which an estimated 750,000 youths 21 years old would be drafted into the U.S. army was held in Washington.
- 18. Japanese Premier Prince Konoye formed a new cabinet, the third headed by him.
- 19. Germans announced the "disintegration" of the Russian front, declaring that Leningrad, Moscow, Kiev and Odessa were threatened by nazi armies; Stalin assumed the post of defense commissar of the soviet union. ¶ Bolivia nipped a subversive plot laid to axis agents, declared a state of siege and demanded the ouster of the German minister.
- 20. The British launched a propaganda campaign called the "V for Victory" drive and designed to stir revolts in axis-occupied countries.
- 22. German-Finnish forces pressed drive on the Leningrad front; Moscow admitted nazi gains in the southern Ukraine sector.
- 23. Vichy yielded to Tokyo's demands for military bases in Indo-China.
- 24. Russian armies claimed to have stopped German drives in vicinities of Leningrad and Smolensk.
- 25. Acting together to balk further Nipponese aggression in the far east, the U.S. and Britain froze all Japanese assets.
 - 26. Pres. Roosevelt placed armed forces of Philippines

- 28. Netherlands Indies suspended oil agreement with Japan in a general order freezing all Japanese assets.
- 29. Nazi forces in the Smolensk area were dislodged by counterattacking Russian units, the red army claimed.
- 30. Pres. Roosevelt asked congress for authority to establish ceilings on living costs to avert inflation. ¶ U.S.S.R. and Polish government-in-exile signed agreement ending state of war between the two countries; U.S.S.R. agreed to recognize the Polish frontiers prior to the soviet-nazi pact of Sept. 1939. ¶ Washington protested to Tokyo over the bombing of an American gunboat, "Tutuila," at Chungking, China.
- 31. Japan's prompt apology for the bombing of the "Tutuila" was accepted by the U.S. ¶ Pres. Roosevelt created an economic defense board and named Vice-President Henry Wallace to head the new agency. ¶ The R.A.F., in the first direct military support given by Britain to Russia, attacked the Finnish port of Petsamo and the naziheld port of Kirkenes in Norway.

AUGUST, 1941

- 1. Pres. Roosevelt banned export of aviation gasoline and oil to all points outside the western hemisphere, excepting the British empire and "countries resisting aggression."
- 5. Germans claimed to have widened the Smolensk gap in their drive on Moscow; Russians reported the halting of twin nazi drives on Kiev.
- 8. 25 soviet divisions were trapped in a nazi pincer movement in the Ukraine, according to German high command.
- 9. Germans hurled large masses of men and material in a new attack on all three major fronts of the Russian theatre of war.
- 11. Russian armies defending the Odessa and Krivoi Rog sectors in the Ukraine area were reported perilled by a German "pocket" movement.
- 12. Bill extending army service to 30 months was approved by single vote in house of representatives; final ballot was 203 to 202. ¶ Marshal Pétain pledged his Vichy regime to collaboration with Adolf Hitler's "new order." ¶ German panzer divisions reached the Black sea coast near Odessa and Nikolayev.
- 14. In a historic meeting aboard a British battleship "somewhere in the Atlantic," Pres. Roosevelt and Prime Minister Churchill agreed on an eight-point declaration of war and peace aims. ¶ German armies captured Krivoi Rog in the southern Ukraine; Russians admitted the loss of Pervomaisk and Kirovo, key towns in the defense of Odessa.
- 15. Leon Henderson, OPACS administrator, ordered a temporary 10% cut in gasoline deliveries to retailers in 17 eastern states.
- 17. The fall of Nikolayev, Black sea naval base, was admitted in Moscow. ¶ Anglo-soviet trade treaty was signed, under which London would lend Moscow £10,000,000 to facilitate commerce exchanges. ¶ Russian troops withdrew from Kingisepp, 70 mi. S.W. of Leningrad, Moscow communiqué said.
- 19. The German army hammered Russian forces falling back toward Leningrad; the Germans laid siege to Odessa and claimed victories in salients near the Dnieper river.
- 21. German troops took the cities of Narwa and Novgorod in their drive on Leningrad; Russians admitted the fall of Gomel in the Kiev sector, while the nazis claimed capture of Kherson, a river port on the lower Dnieper.
 - 22. Finnish troops announced the capture of Kaekisalmi,

- 75 mi. N. of Leningrad; soviets evacuated Nikopol on the Dnieper's west bank, Moscow said.
- 23. The U.S. took over the Federal Shipbuilding and Dry Dock Co. in Kearny, N.J., where construction of naval and merchant ships had been halted by a strike. ¶ Red army forces launched counterattack in Gomel sector.
- 24. Prime Minister Churchill told Japan that Britain would range itself on the side of the U.S. in the event of far eastern trouble.
- 25. Russian and British troops simultaneously marched into Iran. ¶ Vichy reported 20,000 German troops were assigned to help French police crush agitation in Paris and suburbs.
- 26. U.S.S.R. warned Japan that any effort to interfere with Russo-American trade in the far east would be considered an unfriendly act. ¶ British troops occupied vital oil areas in southern Iran while Russian forces to the north marched into Tabriz. ¶ Hitler's armies captured Dnepropetrovsk in the Ukraine after Russians had blown up huge Dnieper dam.
- 27. German forces crossed the Dnieper river and seized Zaporozhe, Berlin reported.
- 28. In an effort to speed up arms production, Pres. Roosevelt created a seven-man Supply Priorities and Allocations board, headed by Vice-President Wallace with Donald M. Nelson as executive director. ¶ New Iran government ended resistance to the invasion of soviet and British troops.
- 29. Adolf Hitler and Benito Mussolini held a five-day parley on the Russian front. ¶ German land, sea and air forces took Tallinn, capital of Estonia, after bitter fighting, Berlin announced. ¶ U.S. war department announced plans to release 200,000 men from army service by Dec. 10, 1941, with special consideration given to dependency cases, conscripts and national guardsmen over 28 and enlisted men with three years of duty.
- 30. Finns captured Viborg, taken by the Russians after the Russo-Finnish War of 1939-40.
- 31. Soviet forces launched heavy counterassaults against nazi positions in the central sector and along the Dnieper river in the Ukraine.

SEPTEMBER, 1941

- 1. Pres. Roosevelt called for more energy to defeat Hitler's "insane violence" and declared he could not betray the cause of freedom with a negotiated peace. ¶ Mexican President Avila Camacho pledged Mexican armed forces to western hemisphere defense, but declared that Mexico desired to stay out of the war. ¶ Vichy persuaded German authorities in Paris to abandon plans for mass execution of Jewish hostages, according to Fernand de Brinon, Vichy's envoy to Paris.
- 2. Berlin reported nazi troops entered the suburb of Krasnoe Selo, only 20 mi. from Leningrad. ¶ Mussolini and Hitler decided at their Russian front meeting to unite all Europe into a single axis-dominated state based on "harmonious co-operation of all European peoples," Il Popolo d'Italia, Duce's newspaper, announced.
 - 3. German armies in Ukraine drove toward Kharkov.
- 4. Nazi U-boat attacked U.S. destroyer "Greer," en route to Iceland; the "Greer" counterattacked with depth charges. ¶ U.S. state department sanctioned sale of oil to Spain.
- 5. Long-range German artillery shelled Leningrad; Moscow said Russian troops counterattacked in the Leningrad area. ¶ British submarines torpedoed five Italian ships,

711

including 23,635-ton liner "Duilio" and a 10,000-ton cruiser, in Straits of Messina.

6. Russian defenders of Leningrad hurled nazi columns back; Moscow reported new nazi thrusts at Kiev repulsed and said soviet armies on lower Dnieper river still held Zaporozhe.

7. Red army forces gave ground slightly before nazi troops pressing toward Leningrad. ¶ Moscow ordered removal of Volga Germans to Siberia in move to forestall

possible sabotage.

8. British war office announced that an Allied force landed on Spitsbergen and destroyed coal mines and a radio station. ¶ German motorized units took Schlusselburg and reached the Neva river in the drive to ring Leningrad, Hitler's headquarters announced.

9. Marshal Timoshenko's red army troops tore 15-mi. gap in nazi central front positions and recaptured Elnya. ¶ U.S. and Britain reached trade agreement under which latter agreed to cut drastically its export trade.

10. Threatening unrest among Norwegian workers led nazi authorities to place Oslo area under martial law. ¶ Red army troops pursued retreating German units in the Gomel and Smolensk sectors.

11. Pres. Roosevelt ordered U.S. navy to shoot first if axis raiders entered American defense zones. ¶ The "Montana," U.S.-owned freighter, was torpedoed in waters 260 mi. S.W. of Iceland. ¶ Prime Minister Churchill defended his minister of aircraft production, J. T. C. Moore-Brabazon, against charges that latter was cool to British efforts to aid Russia. ¶ Soviet Foreign Commissar Molotov formally charged that Bulgaria was serving as axis base.

12. Authorized German spokesman asserted that President Roosevelt's "shoot first" order would compel the reich to take fitting countermeasures. ¶ Russian high command announced withdrawal of red army troops from Chernigov, key city midway between Kiev and Gomel. ¶ German authorities made mass arrests in Norway to foil possible revolt by \$50,000 trade unionists, Swedish reports said.

13. Russians claimed Marshal Semyon Timoshenko's central front armies hurled back German thrust at Bryansk, 220 mi. S.W. of Moscow; two nazi tank corps commanded by Col. Gen. Heinz Guderian were reported routed.

14. An R.A.F. wing, complete with ground crews and materiel, arrived in U.S.S.R., British air ministry announced. § Finnish hopes for early peace were voiced by Vaino Tanner, Finnish trade and communications minister.

15. Sec'y of Navy Knox told American Legion convention in Milwaukee that, beginning Sept. 16, the U.S. navy would start to protect ships carrying lend-lease aid between the American continent and Iceland. ¶ President Roosevelt's report to congress on lend-lease aid disclosed that \$6,281,237,421 had been allocated for aid and that \$388,912,115 of this amount had been spent up to Aug. 31. ¶ Argentine Chamber of Deputies approved a resolution censuring German Ambassador Baron Edmund von Thermann for abusing his diplomatic privileges.

16. Riza Shah Pahlavi of Iran abdicated because of "failing health"; his son, 21-year-old Mohammed Reza Pahlevi, succeeded to throne. ¶ Pres. Roosevelt made Edward R. Stettinius, Jr., his special aid and gave him broad powers to speed arms shipments to Britain and its allies. ¶ U.S. navy dep't announced that all contracts for the 2,831 ships needed for two-ocean fleet had been awarded.

17. German armies widened their bridgehead on east bank of Dnieper. ¶ RFC contracted for purchase of \$100,000,000 in soviet metal ores in return for Russian purchases of U.S. goods. ¶ Bulgaria asked Turkey to open Strait of Dardanelles to 13 warships. ¶ American Legion in annual convention at Mılwaukee adopted resolution backing Roosevelt's foreign policy and approving use of U.S. forces on foreign soil if war became unavoidable.

18. Pres. Roosevelt asked congress for new appropriation of \$5,985,000,000 under lend-lease program. ¶ Stalin ordered conscription of all civilian males in U.S.S.R. between 16 and 50 not already in military service, for training, after working hours, in use of war weapons. ¶ Lynn U. Stambaugh was named national commander of American Legion.

19. German panzer spearhead entered Kiev; nazi drive 200 mi. south captured Poltava.

20. Berlin reported German troops were mopping up Kiev and pocket to east where 200,000 soviet soldiers were said to be trapped. ¶ Pres. Roosevelt signed new tax bill of \$3,553,400,000.

21. Nazi panzer divisions breached Russian lines and reached Sea of Azov, cutting off Crimea; Berlin reported Marshal Budenny's force of 150,000 men trapped east of Kiev faced total annihilation.

23. Pres. Roosevelt disclosed U.S. plan to arm merchant ships. ¶ Sec'y of Navy Knox urged repeal of neutrality act in speech at launching of new 35,000-ton battleship "Massachusetts." ¶ Argentine troops occupied two vital aerodromes in move to foil plot of young aviation officers laid to nazi inspiration. ¶ Formation in London of French National council to serve as a provisional government was announced by Free French Leader Gen. Charles de Gaulle.

24. 11 allied governments pledged adherence to Roosevelt-Churchill "Atlantic charter."

25. U.S.S.R. hurled great masses of troops at nazi concentrations east of Dvina river 300 mi. below Leningrad. ¶ Widespread activities of Serbian guerrillas led Rome to dispatch Italian troops to reoccupy Croatian demilitarized zone.

27. Nazi stuka planes strafed Serbian guerrillas while bombers and big guns razed the town of Uzice, centre of rebellion. ¶ Reinhard Heydrich, nazi chief of security police, named reich protector of Bohemia-Moravia.

28. Nazis arrested Czech Premier Gen. Alois Elias and declared state of emergency in six sections of Bohemia-Moravia. ¶ Strike of 17,000 C.I.O. steel workers at three big plants in Birmingham area ended when Gov. Dixon withdrew home guardsmen.

29. W. Averell Harriman, head of U.S. mission to Moscow, pledged fullest U.S. support to U.S.S.R. at opening

of Anglo-U.S.-Soviet parleys in soviet capital.

30. Prime Minister Churchill reported British gains in military strength but warned that Germany still held initiative in all military fields except air. ¶ Freedom of worship as well as right to propagandize against it guaranteed by constitution of U.S.S.R., as by the U.S. constitution, said President Roosevelt in press conference.

OCTOBER, 1941

1. Delayed dispatch from Reykjavik announced landing of new force of U.S. army units in Iceland under command of Maj. Gen. Charles H. Bonesteel. ¶ New U.S. excise tax of 10% on retail goods went into effect; many luxury products were hit by new levy. ¶ U.S. and Britain should police world for at least 100 years after defeat of axis to ensure peace enforcement, Sec'y of Navy Knox said in address before American Bar association. ¶ U.S. and

British missions agreed to fill all soviet needs for war supplies, at close of three-power parley in Moscow. ¶ Chinese military dispatches said Japanese armies had retreated in disorder from Changsha.

2. Intensive drive against Moscow along a 375-mi, front launched by German armies. ¶ German bombers blasted five English towns in first big raids over Britain after

beginning of Russian campaign.

- 3. German armies had broken backbone of Russian resistance, Hitler told German people. § British authorities called last-minute halt to scheduled exchange of some 3,000 German and British war prisoners. ¶ Australian Prime Minister Arthur W. Fadden's government fell after debate on budget; John Curtin, labourite, accepted commission to form new government. ¶ Charles A. Lindbergh told America First rally in Ft. Wayne that Pres. Roosevelt was leading U.S. along road which might involve suspension of congressional elections in 1942. ¶ Pres. Roosevelt revealed that he had been pressing U.S. representatives in Moscow to prod U.S.S.R. to permit freedom of religious worship. ¶ Six Jewish synagogues were blown up in Paris; Marshal Pétain commuted death sentence of Paul Colette, young Frenchman who shot Pierre Laval and Marcel Déat, to life imprisonment. ¶ Pope Pius XII denounced sterilization, racial marriage laws and "mania for divorce."
- 4. Soviet troops made 18-mi. advance in the Ukraine sector, Moscow reported. ¶ Norwegians warned by nazi Commissioner Josef Terboven to accept Quisling's "new order" or be annexed to reich.
- 6. New York Yankees beat Brooklyn Dodgers, four games to one, to win 1941 baseball world series.
- 7. German Field Marshal Fedor von Bock's forces drove to within 130 mi. of Moscow; Field Marshal Karl von Rundstedt's armies seized ports of Mariupol and Berdiansk on Sea of Azov. ¶ Finnish government rebuffed Britain's demand to cease war on U.S.S.R.
- 8. Recapture of Ichang in Hupeh province by Chinese admitted by Japs in Shanghai. ¶ Russians admitted loss of Orel.
- 9. Pres. Roosevelt asked congress for immediate authority to arm U.S. merchantmen. ¶ Arnulfo Arias, who banned arming of Panama merchant ships, was ousted as president of Panama; cabinet selected Ricardo Adolfo de la Guardia as his successor.
- 10. German panzer divisions reached point 105 mi. S. of Moscow. ¶ British War office disclosed that shock troops known as "commandos" were being drilled for "invasion manoeuvres."
- 11. U.S. naval vessel discovered and "disposed of" German radio station operating in Greenland, navy dep't announced.
- 12. Germans advanced in Vyazma sector; red army admitted that Germans had taken Bryansk.
- 13. German troops occupied Vyazma, 130 mi. W. of Moscow.
 - 14. Moshaisk and Kalinin areas reached by Germans.
- 15. Nazi armies captured Kalinin, 100 mi. N.W. of Moscow. ¶ George E. Browne, indicted president of Stage Employees and Motion Picture Operators unions, was replaced as 11th vice-president of A.F. of L. at latter's convention in Seattle.
- 16. Japanese Premier Fumimaro Konoye's cabinet resigned after ministers failed to agree on national policy.
 ¶ Rumanian troops captured Odessa after two-month siege; nazis reported capture of Kaluga.
- 17. U.S.S. "Kearny," 1,630-ton destroyer, was torpedoed and damaged near Greenland. ¶ U.S. navy ordered U.S. merchantmen in Asiatic waters to put into friendly ports.

- 18. Strong Russian counterattacks blocked nazi thrusts in Kalinin and Moshaisk sectors. ¶ Lt. Gen. Hideki Tojo formed new Japanese cabinet and took over portfolios of prime ministry, war and home ministries. ¶ Hundreds of Yugoslav rebels were executed in an effort to stamp out revolt of Chetniks, Serb patriots. ¶ Canada's decision to control wages and prices was announced by Prime Minister W. L. Mackenzie King.
- 19. U.S. merchant ship "Lehigh" sunk in South Atlantic by submarine. ¶ Germans captured port of Taganrog in Donetz basin.
- 20. Moscow diplomatic corps reached Kuibyshev (Samara), temporary headquarters for foreign envoys in soviet union. ¶ Sec'y of Treasury Morgenthau disclosed U.S. had advanced \$30,000,000 to soviet union against promise of gold delivery. ¶ Panama's new government revoked ban on arming merchant ships.
- 21. Nazis executed 50 French hostages in Nantes, France; 100 more were ordered slain Oct. 23. ¶ Russians declared all German drives on Moscow had been stopped; Berlin announced capture of Stalino, and occupation of Dagoe Island at mouth of Gulf of Finland. ¶ William Fox, former movie producer, was sentenced to year and day in federal penitentiary and fined \$3,000 on charge of conspiracy to obstruct justice.
- 22. Germans seized 100 more French hostages after slaying of nazi major in Bordeaux; 50 were shot Oct. 24. ¶ Rumania denounced Vienna pact in effort to regain part of Transylvania surrendered to Hungary in Aug. 1940. ¶ Gen. Robert E. Wood, acting chairman of America First committee, appealed to Pres. Roosevelt to submit question of war or peace to vote of congress. ¶ Zagreb newspaper disclosed that nazis had executed 200 "Jews and communists" as reprisal for attack on two German soldiers in Belgrade Oct. 17.
- 23. Georgi K. Zhukov, chief of soviet general staff, took over command of central zone operations following shake-up of red army command; Marshal Timoshenko was shifted to southern front while Marshals Budenny and Voroshilov were charged with formation of new Russian armies.
- 24. Arthur Starnes, parachutist, dropped 29,300 ft. before opening his 'chute in record free fall from plane over Chicago.
- 25. German troops captured Kharkov and launched new drive against Moscow.
- 28. Mussolini, in speech marking 20th year of fascism, boasted that "coalition of bolshevism and its European and American allies" would be shattered.
- 29. Charles Fahy was named U.S. solicitor general by Pres. Roosevelt. ¶ ASCAP music became available to NBC and CBS radio networks as organization of composers signed agreement with radio companies ending dispute over royalties that began Jan. 1, 1941.
- 30. 1,190-ton U.S. destroyer "Reuben James" was torpedoed and sunk while on convoy duty west of Iceland; 76 of crew missing.
- 31. German troops pierced outer defenses of Tula.
 ¶ Marshal Boris Shaposhnikov was renamed chief of staff of red army.

NOVEMBER, 1941

1. Reich formally charged U.S. with attacking Germany in naval incidents involving U.S. destroyers "Greer" and "Kearny." ¶ German troops advanced in Kalinin area; Russians admitted nazi spearheads had entered Tula.

2. Pres. Roosevelt placed entire coast guard under navy dep't. ¶ Germans captured Simferopol, Crimean capital.

3. Reich rejected U.S. request for compensation of \$2,967,092 for torpedoing of U.S. freighter "Robin Moor" in South Atlantic May 21, Sec'y Hull revealed.

4. Fiorello La Guardia was re-elected mayor of New York city. § British warships seized six vessels in Vichy convoy trying to run contraband for Germans in South Atlantic. § Nazi divisions captured Theodosia, Crimean port near Kerch.

5. Japanese gov't announced that veteran diplomat Saburo Kurusu was en route to Washington on mission to establish basis for peace in Pacific areas.

6. U.S. loan of \$1,000,000,000 in lend-lease aid to U.S.S.R. was arranged through exchange of letters between Roosevelt and Stalin, state dep't revealed. ¶ Soviet government announced appointment of Maxim Litvinov to succeed Constantine Oumansky as Russian ambassador to Washington. ¶ Premier Stalin urged creation of second front and forecast "inevitable doom" of Hitler in broadcast on 24th anniversary of October revolution. ¶ Nazi propaganda minister Goebbels warned Germans they would face "inferno" if reich lost war. ¶ George Browne and Willie Bioff, who won control of A.F. of L. stage union, were found guilty by federal court in New York city of violating anti-racketeering statute. ¶ U.S. cruiser seized "Odenwald," axis raider disguised as U.S. merchant ship, in Atlantic equatorial waters, navy announced.

7. After 11 days of bitter debate, U.S. senate voted 50 to 37 to amend neutrality act to permit arming of U.S. merchantmen and entrance of U.S. ships into war zones. ¶ Russians launched counter-offensive from Kalinin to Volokolamsk.

8. German warships would fire on U.S. vessels only it attacked, Adolf Hitler declared in speech marking 18th anniversary of Munich beerhall putsch.

10. Churchill pledged U.S. that Britain would declare war on Japan "within the hour" if Japan and U.S. should go to war.

11. Finland rejected U.S. request to stop fighting against U.S.S.R. ¶ Manuel Quezon was re-elected president of the Philippines by estimated 7-to-1 margin over his nearest opponent.

12. Churchill told house of commons battle of Atlantic was turning in Britain's favour.

13. House of representatives voted 212 to 194 to amend neutrality act. ¶ Counterattacking Russian troops made new gains in Tula sector; nazi forces reported capturing coast positions south of Kerch in Crimea.

14. "Ark Royal," 22,500-ton British aircraft carrier, was torpedoed and sunk by axis submarine about 25 mi. E. of Gibraltar. J U.S. marines were ordered by Pres. Roosevelt to leave garrisons in Shanghai, Peiping and Tientsin.

16. C.I.O. national executive board voted unanimously to back John L. Lewis and United Mine Workers' union in strike for union shop in captive coal pits.

17. Japanese Premier Hideki Tojo set as terms for peace in Pacific: hands off China, lifting of economic blockade against Japan and end of military encirclement. ¶ Pres. Roosevelt and Saburo Kurusu, special Japanese envoy, conferred on Pacific crisis. ¶ Germans claimed capture of Kerch, key city in Crimea. ¶ Hitler placed sonquered areas of U.S.S.R. under civil administration of Alfred Rosenberg, chief nazi ideologist. ¶ Pres. Roosevelt signed law repealing neutrality act.

18. British forces launched a surprise sea, air and land

offensive into Libya, advancing 50 mi. in first 24 hr. § C.I.O., in its fourth constitutional convention, unanimously endorsed foreign policy of Pres. Roosevelt. § Lt. Gen. Sir Alan Brooke was named to succeed Gen. Sir John G. Dill as chief of British imperial general staff; Lt. Gen. Bernard C. Paget was appointed commander in chief of home forces, the post vacated by Gen. Brooke. § Japan's special emissary Saburo Kurusu and Ambassador Kichisaburo Nomura asked Tokyo for further instructions after three-hour parley with Sec'y Hull. § Russians admitted situation was "grave" in Crimea as red army withdrew from Kerch.

20. British desert armies captured Rezegh, 10 mi. S. of besieged Tobruk. ¶ Gen. Maxime Weygand "retired" as Vichy proconsul in Africa; Gen. Alphonse Juin was named head of French armies in North Africa. ¶ U.S. halted all economic aid to French North Africa on grounds that Weygand was ousted on express demand of Hitler.

21. Sixth major offensive against Moscow in three weeks was halted at Volokolamsk and Tula.

22. Anzac troops captured Fort Capuzzo, Italian strong-hold in Libya. ¶ Berlin announced that German troops had captured Rostov. ¶ John L. Lewis called off strike in captive coal mines and accepted Pres. Roosevelt's proposal for arbitration of union shop issue.

23. Anzac forces recaptured Bardia on Libyan coast while British and nazi tank armies engaged in battle at Rezegh. ¶ Germany cut occupation cost levied against French by 100,000,000 francs daily. ¶ U.S. consulate in Saigon, French Indo-China wrecked by bomb; none were injured. ¶ OPM announced use of lead and tin foil for wrapping cigarettes, candy and similar products would be prohibited after March 15, 1942.

24. Striking without warning, Japanese naval and air forces attacked and severely damaged U.S. ships in Pearl Harbor naval base, Hawaii, and also attacked strategic points in Philippines and Guam; Nipponese planes bombed Hong Kong and Singapore; Japanese troops landed in Malaya and moved on Thailand from French Indo-China; Japanese envoys were delivering Tokyo reply to U.S. note at time of attack on U.S. possessions; note rejected U.S. terms and said U.S. and Britain were "conspiring" against Japanese interests in Asia. ¶ Netherlands government in exile in London declared war on Japan; Canada and Costa Rica also declared war. ¶ Sec'y of Treasury Morgenthau impounded \$131,000,000 in Japanese investments in U.S. ¶ Russian armies broke German line on Moscow front at two points and destroyed two divisions.

News of the Japanese attack on Pearl Harbor, Manila and other points in the far east, flashing around the Times building at Times square, New York, Dec. 7, 1941

8. U.S. congress declared war on Japan; senate voted 82 to 0 and house voted 388 to 1; Representative Jeanette Rankin (Rep., Mont.) was lone dissenter. ¶ Prime Minister Churchill declared war on Japan in speech before house of commons; China declared war against Germany, Italy and Japan; Free French declared war against Japan, as did Honduras, San Salvador, Guatemala, Haiti and Dominican Republic. ¶ Thailand capitulated to Japan, 18 hours after first attack. ¶ Berlin spokesman admitted that winter had stopped German drive on Moscow and that capture of Russian capital was not expected before spring.

9. Pres. Roosevelt said U.S. had suffered serious reverses in Hawaii and told nation to expect long war. ¶ False air raid alarms upset New Yorkers. ¶ Japanese landed strong forces in Kota Bharu area of northern Malaya. ¶ Cuba and Nicaragua declared war on Japan. ¶ Russian armies recaptured Tikhvin on Leningrad front, reopening road

to Moscow.

10. Japanese torpedo planes sank 35,000-ton battleship "Prince of Wales," and 32,000-ton battle cruiser "Repulse" off Malaya. ¶ Japanese forces approached Kota Bharu, important Malayan air base 350 mi. north of Singapore; Japs landed strong forces on northern Luzon coast while air raiders launched heavy attacks on Cavite naval base near Manila. ¶ British armies in Libya completely freed Tobruk garrison and captured Gambut.

11. Germany and Italy declared war on U.S. and signed new pact with Japan to preclude separate peace; U.S. congress unanimously declared war on Germany and Italy. ¶ Mexico broke off relations with Germany and Italy; Cuba, Costa Rica, Nicaragua, Guatemala and Dominican Republic declared war on Germany and Italy.

12. U.S. forces battled Japanese invaders on three sides of Luzon island; Japanese strengthened their landing forces at Aparri and Vigan and landed troops off Zambales province and at Legaspi; small U.S. garrisons still held Wake and Midway islands. ¶ British withdrew from advanced positions in Hong Kong; Japanese said their troops had captured Kowloon; Chinese troops attacked all along Kwangtung front to relieve Japanese pressure on Hong Kong; withdrawals in Malaya near Thai border acknowledged by Britain. ¶ U.S. seized 83,000-ton liner "Normandie" and 13 other French ships.

13. U.S. armies recaptured Lingayen beach-head in Philippines. ¶ Premier Hideki Tojo cautioned Japan against over-optimism and warned of long, hard war. ¶ Allied destroyers in Mediterranean sank two Italian cruisers while a British submarine sank a third cruiser, British admiralty announced. ¶ U.S.S.R. would concentrate all efforts toward smashing Hitler's armies and did not envisage opening second front against Japan, Ambassador Maxim Litvinov told U.S. press. ¶ Red Army troops captured Volkhov on Leningrad front.

14. U.S. bombers sank four Japanese troopships and damaged five others off northern Luzon; U.S. marines on Wake island repulsed new Japanese attacks; Hong Kong rejected an ultimatum to surrender. ¶ Turkey told U.S. it would remain neutral in new conflict; Premier Eamon de Valera reaffirmed Eire's neutrality.

15. Sec'y Knox declared that 32,600-ton battleship "Arizona," three destroyers, a minelayer and target ship had been sunk in Japanese attack on Pearl Harbor, Dec. 7; he also said battleship "Oklahoma" was capsized but could be repaired. ¶ Pres. Roosevelt accused Emperor Hirohito of personal complicity in Japan's treacherous attack on

U.S. ¶ Japanese mechanized armies entered southern Kedah in Malaya. ¶ Moscow reported recapture of Klin, and announced new victories on all Russian fronts. ¶ Both houses of congress voted bill calling for \$10,077,077,005 in emergency war appropriations.

16. Filipino army division held Lingayen beach after 72-hour battle. ¶ British command in Hong Kong admitted evacuating mainland section on night of Dec. 11-12. ¶ Both houses of congress adopted bills granting Pres. Roosevelt virtually unlimited war powers. ¶ Pres. Roosevelt appointed Byron Price director of U.S. censorship. ¶ Russian troops recaptured Kalinin, Petrovsk and Volovo; Moscow said 9th German army corps had been destroyed.

17. U.S. commanders of army, navy and air forces in Hawaii were ousted; Rear Adm. Chester W. Nimitz was named commander-in-chief of Pacific fleet, relieving Adm. Husband E. Kimmel; Lt. Gen. Delos C. Emmons was assigned to command the Hawaiian department, relieving Lt. Gen. Walter C. Short. § British forces blew up oil wells and refineries in British Borneo as Japanese units made successful landing; Japanese troops in Malaya were reported in province of Wellesley. § Soviet armies between Lake Onega and Murmansk launched new drive on Finnish and German armies.

18. Tokyo communiqué said Japanese force had landed on island of Hong Kong; Netherlands and Australian forces occupied Portuguese section of Timor; British admitted Penang, island base off Malayan coast, had been cut off by Japanese. ¶ U.S. reached naval agreement with French authorities of Martinique. ¶ British armies broke axis lines west of El Gazala in Libya.

19. Portuguese Premier Salazar demanded evacuation of Timor Island by Allied force; British garrisons withdrew from Penang. ¶ House and senate voted bill to set draft age at 20 to 44 inclusive. ¶ British motorized forces occupied Derna airport in Libya. ¶ Russian troops recaptured Ruza and many other towns on central front. ¶ Spain announced "nonbelligerent" status in Pacific war.

20. Japanese troops landed at Davao on Mindanao Island, 600 mi. S. of Manila, and engaged U.S. forces.

§ British forces in Malaya organized new line south of Krian river, 300 mi. above Singapore.

§ Adm. Ernest J. King was named commander in chief of U.S. fleet; Rear Adm. Royal E. Ingersoll was named commander of Atlantic fleet.

§ Russian armies recaptured Volokolamsk.

§ British force occupied Derna as two other armies pursued axis units in Libya.

21. Adolf Hitler removed Field Marshal Walther von Brauchitsch as commander in chief of German army and assumed post himself.

22. Prime Minister Churchill made secret trip to Washington to confer with Pres. Roosevelt. ¶ U.S. and Filipino armies battled heavy Japanese force landed in Lingayen area from 80 Japanese transports carrying estimated 80,000 to 100,000 troops. ¶ Pres. Roosevelt signed amended selective service bill. ¶ Wake Island occupied by Japanese after 14-day resistance by garrison of 385 U.S. marines.

23. Pres. Roosevelt disclosed that he and British Prime Minister Churchill were conferring on plans for definite unity of action in Pacific; anti-axis war plans should be based upon defeating Germany not by anticipation of internal collapse but by external military blows, Churchill declared in dual press conference with Pres. Roosevelt at White House. ¶ Generalissimo Chiang Kai-shek named T. V. Soong Chinese foreign minister to replace Dr. Quo Tai-chi.

24. Free French naval force commanded by Vice-Admiral Emile Muselier occupied Vichy-governed islands of

St. Pierre and Miquelon. ¶ New Japanese landing near Atimonan on Luzon's east coast was announced by U.S. army headquarters in Philippines. ¶ Pope Pius XII, in annual Christmas message, broadcast five-point peace program and condemned anti-Christian movements and aggression. ¶ British troops in Libya took Barce and Benina, advancing to within 12 mi. of Bengasi.

25. British garrison at Hong Kong surrendered to Japanese after 16-day siege. ¶ 98% of St. Pierre's male population voted for Free French rule in plebiscite; U.S. state department assailed Free French occupation of St. Pierre and Miquelon and asked Canada what steps it would take to restore status quo. ¶ British armies captured Bengasi.

26. Gen. MacArthur declared Manila an "open city" to spare it from air or ground attack; Jap tank units struck heavily at Lamon bay; Nipponese spearhead reached Binangonan, 110 mi. N. of Manila; Air Chief Marshal Sir Robert Brooke-Popham was relieved of British far east command and replaced by Lt. Gen. Sir Henry Pownall. ¶ Addressing joint session of U.S. congress, British Prime Minister Churchill declared that anti-axis forces would probably launch victory drive in 1943. ¶ OPA Administrator Leon Henderson rationed new tires.

27. Japanese planes launched heavy air attack on "open city" of Manila; Nipponese troops steadily advanced on Manila from both north and south. ¶ Russian forces advanced on wide sweep along Oka river and captured Likhvin, rail juncture 30 mi. S. of Kaluga. ¶ British "commando" units staged raids on Vaagsoe and Maaloy islands off Norwegian coast, admiralty announced.

28. Pres. Roosevelt assured Philippines that their freedom would be redeemed, as U.S. navy promised "positive assistance" to hard-pressed islands. ¶ Japanese armies intensified drive about 45 mi. N. of Manila; Tokyo war office spokesman said Japanese armies refused to be bound by U.S. "arbitrary and unilateral" announcement of Manila as open city; Netherlands armies battled Japanese parachute troops in Dutch Sumatra near the Medan airport.

29. Gen. MacArthur shortened his lines as Japs continued drives on Manila bay; Nipponese forced spearhead through Ipoh, Malaya, and advanced to Kuantan on east coast.

30. Russian forces, covered by soviet Black sea fleet, captured Kerch and Theodosia; Russian armies on central front also recaptured Kaluga. ¶ \$50,000,000,000 yearly, half U.S. national income, would be expended for war production, Pres. Roosevelt announced. ¶ Churchill addressed Canadian parliament in Ottawa on Allied plans to defeat axis powers. ¶ Mohandas K. Gandhi quit leadership of All-India National congress party because it abandoned civil disobedience policy.

31. Hitler, in New Year's message, warned German people of hard fighting ahead in 1942.

JANUARY, 1942

1. Gen. MacArthur united his armies into single line girdling Manila; British acknowledged loss of Sarawak on north coast of Borneo; Nipponese submarines shelled Kauai, Maui and Hawaii, three islands in the Hawaii group. ¶ Representatives of 26 countries at war with axis signed in Washington a "Declaration by United Nations." ¶ British commandos staged successful raid on nazi-held Lofoten islands off northern Norway, London announced. ¶ Complete ban on retail sale of new passenger automobiles and light and heavy trucks was imposed by OPM. ¶ Marshal Pétain, in New Year's day speech, appealed

to reich to ease harsh occupation terms imposed on France.

Gandhi on proposals for Indian independence. ¶ Russian naval forces landed Red army units behind nazi lines in Murmansk area in move to thwart German drive on that arctic seaport. ¶ U.S. Senate rejected committee ruling calling for ouster of Sen. William Langer (Rep., N.D.) on charges of political corruption. ¶ Joe Louis knocked out Abe Simon in 6th round of scheduled 15-round bout for world's heavyweight boxing championship.
- 28. British commandos raided nazi submarine base at St. Nazaire, France. ¶ Japanese troops battled way into Toungoo after bitter hand-to-hand fighting with Chinese forces in Burma.
- 29. Sir Stafford Cripps revealed British plan to offer India complete dominion status after war in return for Indian co-operation in fight against axis.
- 30. Creation of Pacific war council announced by Pres. Roosevelt to plan joint war policy; member nations included U.S., Australia, New Zealand, China, Netherlands, Canada and Great Britain.
- 31. British armies in Prome area of Burma were cut off by Japanese force advancing up Irrawaddy valley. ¶ Gen. Sir Thomas Blamey was named commander of Australia's armies.

APRIL, 1942

- 1. Japanese forces in Bataan captured U.S.-Filipino outposts. ¶ Chinese units evacuated Toungoo in Burma as British armies withdrew 15 mi. in Prome area.
- 2. British forces abandoned Prome in Burma after violent battle. ¶ Rear Adm. Philippe-Marie Auboyneau was named commander of Free French naval forces, succeeding Adm. Emile Muselier, who resigned.
- 3. Carlton J. H. Hayes, history professor at Columbia university, was named U.S. ambassador to Spain, succeeding Alexander W. Weddell.
- 4. U.S. recognized Free French control over Cameroons and French Equatorial Africa. ¶ F.B.I. agents arrested William Dudley Pelley, pro-fascist leader and chief of "Silver Shirts."
- 5. British fighter planes and anti-aircraft guns shot down 27 of 75 Japanese planes that attacked Colombo and Trincomalee in their first raid on Ceylon. ¶ Japanese armies pierced Gen. Wainwright's lines on Bataan peninsula.
- 6. India suffered first air raid when Japanese planes bombed Vizagapatam and Cocanada on Bay of Bengal.

 ¶ Japanese drive in Bataan gained momentum and seriously threatened U.S. forces.
- 7. British armies in Burma fell back to new line 40 mi. above Prome. ¶ Russians succeeded in reopening a rail line to beleaguered Leningrad, soviet dispatches said.
- 8. Gen. George C. Marshall, U.S. army chief of staff, and Harry Hopkins arrived in London to discuss United Nations war problems. ¶ Gen. Yamashita hurled waves of Japanese troops against American lines on Bataan, compelling new withdrawal of U.S. and Filipino forces. ¶ Japanese forces occupied Lorengai, capital of Manus Island in Admiralty group. ¶ Egyptian gov't arrested Aly Maher Pasha, former premier, "for reasons relating to safety and security of state."
- 9. Japanese armies overran Bataan, encircling exhausted American and Filipino army; U.S. continued to hold Corregidor and other island forts in Manila bay.

- 10. 12,000 Japanese troops landed on Island of Cebu in Philippines. ¶ Japanese dive bombers sank 10,850-ton British aircraft carrier "Hermes" in Bay of Bengal. ¶ All-India Congress party and Moslem league rejected British proposals for Indian independence; Sir Stafford Cripps, British negotiator, charged attitude of India's leaders was "critical and unconstructive."
- 12. Pandit Nehru said India would not participate in Britain's war effort, but would attempt to organize own war effort on free and independent basis.
- 13. Prime Minister Churchill revealed that Lord Louis Mountbatten had been appointed chief of commando raiders of British army, navy and air forces.
- 14. Pierre Laval returned to power in Vichy gov't amid worsening relations between U.S. and Vichy. § British 1942-43 budget called for £4,500,000,000 in revenues and £5,286,000,000 in expenditures. § U.S. and Filipino armies in Cebu put up stiff resistance to invading Japanese troops; Nipponese armies occupied Migyaungye in drive to capture rich Yenangyaung oil fields in Burma.
- 16. Japanese troops landed on island of Panay in Philippines. ¶ All inhabitants of Malta, civilian and military, were decorated en masse with the George cross for heroism and bravery during daily axis air raids.
- 17. U.S. expressed disapproval of Laval regime in Vichy by recalling Ambassador William D. Leahy to Washington "for consultations." ¶ British forces destroyed rich Yenangyaung oil fields before evacuating city of Magwe.
- 18. Japanese mainland was bombed for first time when planes, identified in a Tokyo broadcast as U.S. bombers, attacked Tokyo, Yokohama, Kobe and Nagoya; U.S. withheld announcement of raid, led by Maj. James H. Doolittle (promoted to brigadier general April 23) until May 10. Pierre Laval formed new Vichy cabinet, assumed title of chief of government and took over foreign affairs, information and interior posts. ¶ War Manpower commission established by Pres. Roosevelt to assure mobilization and effective use of nation's manpower; Paul V. McNutt was named chairman. ¶ Japanese captured city of Cebu on Cebu Island, Philippines, U.S. war dep't announced. ¶ "Surcouf," world's largest submarine, under De Gaullist colours, was listed as lost by Free French headquarters in London.
- 20. Pres. Roosevelt ordered navy to seize and operate four plants of Brewster Aeronautical corporation in New York city on grounds that plants were poorly managed. ¶ Pierre Laval, chief of gov't in Vichy, told Frenchmen their only hope of salvation lay in reconciliation with Germany.
- 21. Immediate seizure of all patents owned or controlled by axis was ordered by Pres. Roosevelt.
- 22. British commandos raided Boulogne, withdrawing after two-hour foray.
- 23. Union of South Africa broke off diplomatic relations with Vichy.
- 24. R.A.F. bombers delivered one of war's heaviest aerial attacks to date on Rostock, Germany. ¶ Chinese armies in Burma recaptured rail terminus of Taunggyi; British and Chinese positions in Burma were perilled by 80-mi. Japanese advance toward both Mandalay and Lashio. ¶ Registration of all U.S. men between ages of 45 and 64 inclusive was started.
- 25. U.S. troops, with Free French consent, had landed on New Caledonia in move to aid in defense of strategic Pacific island, war dep't announced. ¶ Gen. Henri Honoré Giraud, commander of 8th French army in May 1940,

U.S. aviators who participated in Gen. James Doolittle's initial raid on Japan, April 18, 1942, are shown with Chinese after their bomber crashed near a tiny village in China

escaped from nazi prison camp; nazis put up 100,000-mark reward for his capture.

26. Hitler renewed his pledge to German people to destroy "bolshevist colossus" but did not say when. ¶ British air force extended night raids to Skoda arms works in Pilsen. ¶ Lt. Gen. Hugh A. Drum ordered immediate dimming of shore lights and control over axis aliens in eastern military area.

27. Pres. Roosevelt presented to congress sweeping program designed to check inflation, including proposals for \$25,000 individual income limit, stabilized wages, price ceilings, rationing of scarce commodities, reduction of farm prices to even parity and credit curtailment. ¶ Canadian gov't's request to use conscription if necessary was approved in national plebiscite. ¶ Gandhi expressed alarm over arrival of U.S. troops in India and urged India to train its own soldiers rather than rely on foreign troops. ¶ U.S. destroyer "Sturtevant" was sunk off Florida coast by underwater explosion, navy dep't said. ¶ WPB ordered 25% cut in coffee deliveries to wholesalers and roasters in order to conserve stocks.

28. OPA froze prices of all major items affecting living costs in drastic move to check inflation; stabilized rent limits were ordered in 301 areas designated as defense rental regions.

29. Lashio, Burmese terminus of Burma road, fell to Japanese troops. ¶ Times square in New York city was virtually blacked out as army ordered dimming of advertising signs and blackout of top stories of skyscrapers to eliminate night sky glow. ¶ R.A.F. bombers raided German naval bases at Kiel and Trondhjem; German fliers retaliated by bombing cathedral town of York.

30. Joseph Stalin asserted soviet union had no territorial ambitions in foreign countries, declaring sole Russian aim was to liberate its lands from "German fascist blackguards." ¶ Hitler and Mussolini conferred for seventh time, near Salzburg, and reached "unity of views and decisions"; conference took place April 29 and 30.

MAY, 1942

1. R.A.F. resumed large-scale raids over Germany and German-controlled areas, bombing railways and ports on nazi-held coast of continent. ¶ Mandalay fell to Japanese army in Burma.

2. Working committee of All-India Congress party adopted resolution urging Indians to meet invasion only through "nonviolent noncooperation." ¶ Japanese bombers and big guns subjected, Corregidor fortress to terrificattack. ¶ Extension of lend-lease aid to Iran and Iraq announced by Pres. Roosevelt.

3. Japanese armies in New Guinea launched new drive up dense Markham valley jungles.

5. British landed on Madagascar to seize French naval base of Diégo Suarez. ¶ Japanese forces landed on Corregidor in drive to crush defenders of Manila bay fortress. ¶ Japanese armies in Burma entered Yunnan province, China, in fast northward push.

6. Corregidor's starving garrison of 7,000 Filipino and U.S. troops and 3,000 civilians surrendered; Gen. Wainwright notified war dep't he was arranging capitulation terms. ¶ Bomb-battered U.S. cruiser "Marblehead," crippled by Japanese planes in Java sea action, had safely reached east coast port, navy announced.

7. Diégo Suarez, Madagascar, surrendered to British forces.

8. U.S. warships smashed Japanese fleet in big naval battle in Coral sea that started May 4; official accounts released June 12 said 15 Japanese warships, including one aircraft carrier and four cruisers, were sunk; U.S. losses were aircraft carrier "Lexington," destroyer "Sims" and a tanker. J London admitted Japanese forces had occupied Burma port of Akyab on Bay of Bengal; Japanese armies in Yunnan province made new gains, occupying Lungling, 50 mi. inside Chinese border.

10. Prime Minister Churchill warned Germans that Britons would retaliate with gas warfare on reich if German soldiers used poison gas on Russian front.

11. German forces launched long-heralded offensive in U.S.S.R. with strong drive against soviet forces in Kerch peninsula.

12. German armies pierced Russian lines in Kerch peninsula in drive toward southwestern shores of Sea of Azov.

13. Russian armies in Donets basin launched offensive against Kharkov in move to relieve German pressure on Kerch peninsula; soviet high command admitted Red army troops had fallen back to new positions in Kerch fighting. § Pope Pius appealed to world statesmen not to pass up opportunities for "an honest peace of justice and moderation."

14. Marshal Timoshenko's forces broke through strongly fortified German positions in Kharkov area; Moscow

admitted further withdrawals in Kerch sector. ¶ Adm. Georges Robert, French high commissioner for Martinique, agreed to co-operate with U.S. officials and disarm French warships there. ¶ Gas rationing along eastern seaboard went into effect; purchases were reduced to about three gallons per week for ordinary motorist. § Pres. Manuel Quezon established Washington headquarters for provisional Philippine commonwealth government-in-exile.

15. Remnants of British armies that survived gruelling Burma campaign eluded Japanese trap in Burma and

reached Indian frontier.

16. German armies captured town and harbour of Kerch. ¶ Pres. Roosevelt ordered release of Earl Browder, U.S. communist leader imprisoned for passport fraud, from Atlanta penitentiary to promote "national unity." ¶ Mrs. Oveta Culp Hobby was sworn in as director of the Women's Army Auxiliary corps, first U.S. women's army

18. Nazi troops, led by tanks and parachutists, launched heavy counterattacks in Kharkov sector. ¶ Rear Adm. Sir Henry Harwood succeeded Adm. Sir Andrew Browne Cunningham as commander of the British Mediterranean fleet.

- 19. German forces launched offensive in Izyum-Barvenkova sector below Kharkov in effort to divert Russian attack on latter city. I Brig. Gen. James H. Doolittle was awarded congressional medal of honour by Pres. Roosevelt for leading U.S. bomber squadron in attack on Tokyo April 18.
- 21. Russian armies halted Hitler's drive in Izyum-Barvenkova sector south of Kharkov and made new gains north of Ukraine industrial city.

23. A Moscow communiqué announced Russian troops had evacuated Kerch peninsula after savage fighting.

- 25. Gen. Joseph W. Stilwell said United Nations took "hell of a beating" in Burma, and declared Allies must retake Burma from Japanese.
- 26. Britain and U.S.S.R. signed 20-year mutual assistance treaty banning a separate peace with Germany. ¶ Nazi armies under Lt. Gen. Viktor von Schwedler regained offensive in Izyum-Barvenkova sector in sharp battles south of Kharkov. J Gen. Erwin Rommel hurled his Afrika Korps against British forces in Libya in new offensive against Allied desert armies.

27. Reinhard Heydrich, nazi protector for Bohemia and Moravia, was critically wounded by bomb hurled at his car on road from Prague to Berlin; he died June 4.

- 28. Rommel's Libyan armies stabbed sharply toward Tobruk in widening drive to flank British. ¶ Chinese forces abandoned Kinhwa, provisional capital of Chekiang province. ¶ Deportation of Harry Bridges ordered by Attorney General Biddle.
- 30. More than 1,000 British bombers dumped 3,000 tons of high explosives over Rhineland city of Cologne in one of war's heaviest single raids; nazi high command admitted damage was great.
- 31. German planes raided Canterbury, England, in reprisal raid for British aerial attack on Cologne.

JUNE, 1942

. 1. Air fleet of 1,036 British planes bombed Rhineland cities, dropping 3,000 tons of bombs on Essen. I Gen. Rommel's nazi panzers beat strategic retreat through two gaps in British mine fields between El Gazala and Bir Hacheim. ¶ Mexico formally declared war on Germany, Italy and

2. Prime Minister Churchill told house of commons that Rommel's plan for offensive in Libya had "gone completely awry." ¶ Pres. Roosevelt asked congress to recognize existence of state of war with Rumania, Bulgaria and Hungary.

- 3. Dutch Harbor, Alaska, was raided twice by Japanese planes. ¶ House of representatives unanimously passed three resolutions declaring war on Rumania, Hungary and Bulgaria.
- 4. British commandos raided French coast between Le Touquet and Boulogne. ¶ U. S. senate unanimously voted to declare war on Rumania, Bulgaria and Hungary. ¶ Adolf Hitler arrived in Finland to present Baron Carl Gustav Mannerheim his personal congratulations on latter's 75th birthday.

5. Pres. Roosevelt warned Japan that U.S. would retaliate in kind if Nipponese persisted in employing poison gas against China or any other United Nations ally.

- 6. U.S. warships and planes sank 4 Japanese aircraft carriers, 3 cruisers and 3 destroyers in Battle of Midway, June 4 to 6; 275 Japanese planes were destroyed and about 4,800 Japanese were killed or drowned; American losses were 307 casualties, destroyer "Hammann" and aircraft carrier "Yorktown," sinking of which was not announced until later.
- 9. Pres. Roosevelt and Prime Minister Churchill announced creation of combined production and resources board and combined food board to co-ordinate United Nations war production and food stocks.
- 10. Russian communiqué announced nazis had launched new offensive in Kharkov sector. ¶ Gestapo completely wiped out Czech village of Lidice, killing all men, sending all women to concentration camps and placing all children in "educational institutions"; this action was taken, Berlin said, because local population gave asylum to assassins of Reinhard Heydrich.
- 11. Pres. Roosevelt and Soviet Foreign Commissar Molotov signed lend-lease agreement. I German forces advanced in Kharkov area after series of fierce battles with defending Russian troops. I Free French garrison withdrew from Bir Hacheim, key position in Libya, after 16-day siege.
- 12. Japanese landings on Attu and Kiska islands in western tip of Aleutian chain announced by U.S. navy dep't.
- 13. Office of War Information established by President Roosevelt to exercise complete control over dissemination of official news and propaganda within U.S. and in other countries, except Latin America; Elmer Davis was named head of OWI.
- 14. Mexico and Philippine commonwealth formally joined United Nations in ceremonies at White House as Pres. Roosevelt appealed to nationals in axis countries to revolt against tyranny.
- 15. U.S. fliers damaged three cruisers, a destroyer and two smaller ships in heavy bombing attacks on Japanese forces in Aleutian islands.
- 16. Russians fought off nazi counterattacks and launched offensive on Kharkov front. ¶ R.A.F. and U.S. planes sank Italian cruiser and two destroyers attempting to attack United Nations convoys in Mediterranean, admiralty re-
- 18. Prime Minister Churchill arrived in Washington for new conferences with Pres. Roosevelt. ¶ Gestapo agents captured and killed assassins of Reinhard Heydrich in Prague church, German communiqué said.
- 20. Gen. Rommel's panzer units captured Bardia, Libyan
- 21. In swift surprise manoeuvre, Gen. Rommel's Afrika Korps seized Tobruk, captured 25,000 prisoners and chased tired British armies back toward Egyptian frontier. ¶ Arch-

bishop of Canterbury warned U.S. and Britain against exploiting their economic power in postwar period.

22. Second-front issue was high-lighted as Pres. Roose-velt and Prime Minister Churchill announced jointly that their objective was "earliest maximum concentration of Allied war power upon enemy"; Maxim Litvinov, soviet envoy to U.S., asked for immediate opening of second front.

23. Heavy German assaults compelled Russian retreat on Kharkov front. § Maj. Clement Attlee, British deputy prime minister, told commons that British fleet had lost one cruiser, four destroyers and two escort vessels while Italians lost one cruiser, two destroyers and one submarine, in Mediterranean convoy battle.

25. More than 1,000 R.A.F. bombers hammered German port of Bremen in 75-min. raid. ¶ Rommel's panzer divisions thrust 60 mi. into Egypt to engage British forces between Sidi Barrani and Mersa Matruh; Gen. Sir Claude J. E. Auchinleck succeeded Lt. Gen. Neil Methuen Ritchie as commander of British 8th army in Egypt. ¶ Russian armies abandoned Kupiansk as Germans developed major offensive southeast of Kharkov. ¶ U.S. established head-quarters in England for European theatre of operations under command of Maj. Gen. Dwight D. Eisenhower. ¶ Gen. George E. Stratemeyer was made chief of staff of U.S. army air force.

27. F.B.I. announced arrest of saboteurs who had been landed from submarines on Long Island with explosives and \$150,000 in cash. ¶ Pres. Roosevelt and Prime Minister Churchill asserted in joint statement that Allied military forces would initiate operations "to divert German strength from attack on Russia."

28. Germans opened new offensive from Kursk, 280 mi. south of Moscow, in attempted drive on Voronezh.

29. British troops evacuated Mersa Matruh on Egyptian coast in headlong retreat before Rommel's drive; nazi high command said 6,000 British were taken prisoner at Matruh.

30. About 3,000,000 youths between ages of 18 and 20 registered in U.S. for military service in fifth U.S. draft.

JULY, 1942

- 1. Sevastopol fell to nazis after 25 days of siege. ¶ British desert armies retreating to El Alamein, 70 mi. from Alexandria.
- 2. British counterattacks halted nazis in El Alamein sector; Prime Minister Churchill revealed Britain had lost 50,000 men and vast stores of supplies in Libya-Egypt battlefields, but house of commons approved his war policy by 475-to-25 vote of confidence.
- 3. U.S. army relaxed draft standards to enable induction of selectees with physical deformities for limited military service.
- 4. U.S. army air forces stationed in Britain bombed nazi military objectives in Netherlands in first U.S. air attacks on axis in Europe.
- 5. German armies made new gains in Kursk-Belgorod sector.
- 7. German armies claimed capture of Voronezh on Don river as nazi offensive swept toward Caucasus oil area. ¶ Maj. Gen. Carl A. Spaatz was named commander of U.S. air forces in Europe.
- 8. British planes dumped "block-busters" two-ton bombs—on shipyards in Wilhelmshaven.
- 9. British forces seized Mayotte, French island near Madagascar. ¶ Foreign Minister Shukru Saracoglu was appointed prime minister of Turkey.

- 10. Russian armies evacuated Rossosh as Hitler's tank forces rolled closer to the Don river. ¶ British 8th army advanced five miles along Egyptian coast railway and captured 1,500 axis prisoners.

- 12. All-India Congress party's working committee adopted Gandhi's plans for mass campaign to compel Britain to give India full independence.
- 13. Free French movement was renamed "Fighting French."
- 14. Maj. Gen. Mark W. Clark was named commander of U.S. ground forces in England.
- 15. Russians lost Boguchar in Don river bend but hurled back German assault at Voronezh. ¶ War Labor board, in 8-to-4 vote, ordered four "little steel" companies to award 44-cents-a-day wage increase to their 157,000 employees.
- 16. Washington asked Finland to shut all Finnish consulates in U.S. by Aug. 1. ¶ Lauchlin Currie, administrative assistant to Pres. Roosevelt, arrived in China to confer with Chiang Kai-shek.
- 17. Yugoslav guerrillas staged three daring raids against fascist garrisons near Trieste and battled Italian forces only six miles from Fiume.
 - 19. Evacuation of Voroshilovgrad admitted by Russians.
- 23. Sec'y of State Hull called for international agency to keep peace by force if necessary and for Allied surveillance over aggressor nations after war. ¶ Special federal grand jury indicted 28 persons, including Mrs. Elizabeth Dilling, George Sylvester Viereck, William Dudley Pelley, Gerald B. Winrod and William Griffin on charges of plotting to "cause mutiny" in nation's armed forces.
- 25. Russians admitted that nazis had established two bridgeheads over Don river near Tsimlyansk, 120 mi. from Rostov.
- 27. Russian armies evacuated Rostov and Novocher-
- 28. Allied patrols hurled back Japanese in mountain battle along Kokoda road on northeast coast of New Guinea.
- 30. Lauchlin Currie, personal representative of Pres. Roosevelt, assured Chinese that war operations in Europe would not prevent U.S. from increasing material aid for China
- 31. German panzer units captured Kushchevskaya in new drive south to Maikop oil fields in Caucasus; Russians admitted new retreat below Bataisk. ¶ U.S. supreme court upheld Pres. Roosevelt's power to order trial of eight nazi saboteurs before military tribunal instead of civil court. ¶ Mildred H. McAfee was named commanding officer of U.S. navy's women reserves (WAVES) with rank of lieutenant commander.

AUGUST, 1942

- 1. German forces captured Salsk on rail line linking Stalingrad and Krasnodar.
- 2. Warning that India's people might welcome Japanese invasion unless nation was granted full independence was sounded by Mohandas K. Gandhi.
- 4. William Green, A.F. of L. president, agreed to proposals made by Philip Murray, C.I.O. leader, to seek basis for merging organizations. ¶ House of commons passed bill transferring criminal jurisdiction over members of U.S. armed forces in England from British courts to U.S. military tribunals. ¶ Citing documents seized in raid on

All-India Congress party offices in Allahabad, British gov't charged that Mohandas K. Gandhi and majority of Congress working committee favoured "appeasement" with Japan. ¶ German armies took Voroshilovsk in drive south of Don river and reached banks of Kuban.

5. William Dudley Pelley, leader of disbanded fascist "Silver Shirts," was convicted on 11 counts of sedition by federal jury in Indianapolis; he was sentenced to 15 years

in prison Aug. 12.

- 6. Max Stephan, Detroit restaurant owner, was condemned to death for aiding nazi prisoner who escaped from Canada, in first U.S. treason conviction and sentence of execution since whisky rebellion in 1794. ¶ Pres. Roosevelt vetoed synthetic rubber bill and established own factfinding committee headed by Bernard M. Baruch to probe rubber situation. ¶ Germans captured Tikhoretsk, important rail junction 90 mi. below Don river and cut Baku-Black sea railway south of Voroshilovsk.
- 7. U.S. naval and marine forces launched heavy offensive against Japanese positions at Tulagi and Guadalcanal in Solomon Islands.
- 8. Six of eight nazi saboteurs were executed in District of Columbia jail; other two received sentences of life and 30 years respectively.
- 9. British government arrested Gandhi and 200 nationalist leaders after All-India Congress party approved resolution authorizing civil disobedience campaign; British authorities outlawed Congress party; rioting flared throughout India.
- 10. Civil disobedience rioting in India took 48-hr. toll of 18 persons killed and 209 wounded.
- 11. Three U.S. cruisers sunk with Australian cruiser by Japs after two-day naval battle off Savo Island.
- 12. U.S. marines consolidated their positions on three islands in Solomon group under protecting barrage of naval guns and bombs, U.S. navy communiqué said.
- 15. Germans launched offensive against Stalingrad with all-out attacks against Russian lines on Kletskaya and Kotelnikovski fronts.
- 16. Russian armies completely destroyed Maikop before evacuating this Caucasus oil city. I Mohammed Ali Jinnah, president of All-India Moslem league, cautioned Britain he would end "co-operation" if Moslem interests were sacrificed in any compromise with All-India Congress party.
- 17. U.S. marine force raided Makin Island in Gilbert group. ¶ Brig. Gen. Ira C. Eaker, chief of U.S. army bomber command, led Flying Fortress raid on occupied France in first all-U.S. aerial attack against nazi-held territory. ¶ Prime Minister Churchill and Premier Stalin completed four-day parley at Moscow in "atmosphere of cordiality and complete sincerity," soviet communiqué announced.
- 18. Gen. Sir Harold R. L. G. Alexander supplanted Gen. Sir Claude J. E. Auchinleck as commander of British imperial forces in middle east; Lt. Gen. B. L. Montgomery was named commander of the British 8th army in Egypt.
- 19. Canadian and British commandos, assisted by several units of U.S. "Rangers," staged nine-hour raid on French coast at Dieppe. ¶ German forces captured Krasnodar in drive toward Black seaport of Novorossiysk. ¶ British lost aircraft carrier "Eagle," cruiser "Manchester," anti-aircraft cruiser "Cairo" and destroyer "Foresight" as axis planes and ships hammered convoy en route to Malta. ¶ Chinese armies recaptured port of Wenchow.
- 21. United Nations would avenge execution of hostages and other "barbaric crimes" committed by axis in occupied Europe, Pres. Roosevelt declared. ¶ Gerhard Wilhelm Kunze, former head of German-American bund, re-

ceived 15-year sentence for conspiracy against the U.S.

22. Brazil declared war against Germany and Italy but not against Japan.

- 24. Siege of Stalingrad began; German tank forces paced a 50-mi. nazi advance to gates of Groznyi oil fields in
- 26. Japanese landed troops in Milne bay, 240 mi. E. of Port Moresby. ¶ Russian armies cut 30-mi. swath in German lines on Rzhev front after 16-day offensive that was launched on Aug. 11.
- 27. Gen. Georgi Zhukov was appointed Russian first vice-commissar for defense. ¶ U.S.S. "Iowa," 45,000-ton battleship, launched at Brooklyn navy yard.
- 28. Pres. Roosevelt hinted in press interview that U.S. would rehabilitate cultural monuments of Spain and spur tourist trade to that country if it remained neutral during
- 29. American Red Cross revealed that Japan had refused safe conduct for passage of mercy ship with supplies for U.S. war prisoners. ¶ Chinese forces recaptured Chuhsien, stormed into Lishui and seized two greatest airports in eastern China.
- 30. Japanese troops in Milne bay area of New Guinea were hurled back into sea by Australian forces, United Nations' communiqué declared. ¶ Chinese stormed suburbs of Nanchang, major Japanese base in Kiangsi province, and recaptured Lungyu in Chekiang province.

SEPTEMBER, 1942

- 1. Resignation of Foreign Minister Shigenori Togo from Japanese cabinet was linked to reports of Nipponese preparations for attack on Siberia. ¶ Japanese jungle troops battled way over Owen Stanley mountains to engage Australian forces at Kokoda.
- 2. Herbert Karl Friedrich Bahr, convicted as nazi spy, was given 30-year sentence by federal court in Newark, N.J. ¶ F.B.I. investigation resulted in sweeping exoneration of 2,049 of 2,095 federal employees who were charged by Dies committee of association with subversive and "un-American" activities.
- 3. Gen. Francisco Franco ousted Ramón Serrano Suñer as Spanish foreign minister in sweeping cabinet shakeup; Gen. Francisco Gomez de Jordana succeeded him.
- 4. Russian planes bombed Budapest, subjecting Hungarian capital to its first air raid of World War II.
- 7. Pres. Roosevelt told congress to enact curbs on wages and prices, declaring that he would put program into effect himself if congress failed to do so by Oct. 1.
- 8. Washington rejected Vichy's protest against raids of U.S. planes in German-held France.
- 9. Smashing German frontal assault compelled Russians to withdraw from two more villages west of Stalingrad. ¶ Edouard Herriot and Jules Jeanneney, former leaders of French parliament, warned Marshal Pétain and Chief of Gov't Laval that Frenchmen would not follow them in war against Allies. ¶ Japanese forces established new lines only 44 mi. from Allied base at Port Moresby in New
- 10. Compromise on Indian freedom demands barred by Winston Churchill, who declared that Cripps plan represented "settled policy" of Britain.
- 11. Soviets admitted loss of Novorossisk, Black sea naval
- 12. New Japanese landings in Solomons reported by **U.S.** navy communiqué.
 - 15. U.S. marines repulsed violent attempts by Japanese

troops to land on Guadalcanal Island. ¶ William M. Jeffers, railway president, was named U.S. rubber administrator

- 16. Russian civilians fought side by side with Red army to save Stalingrad as nazi shock troops battered northwest outskirts of city.
- 17. Charles E. Wilson, president of General Electric Company, was named vice-chairman of WPB.
- 18. Fresh Red army troops from Siberia helped Russians beat back three nazi shock forces that had penetrated into streets of Stalingrad. ¶ Nazis in Paris executed 116 Frenchmen who were described as "communist terrorists," a London report said.
- 23. Tananarive, capital of Madagascar, captured by British after two-week drive. ¶ Joseph Stalin received Wendell L. Willkie, Pres. Roosevelt's emissary, for two-hour conference in Kremlin.
- 25. More than 1,500 German dead littered Stalingrad streets after Russian troops regained important position within embattled city.
- 26. Wendell L. Willkie urged second front in Europe at earliest possible moment, in speech in Moscow, warning that "next summer may be too late."
- 27. Russians lost ground to Germans in one sector of Stalingrad, but drove Germans from buildings in house-to-house battles in another.
- 29. Australian forces slashed through Japanese lines in Owen Stanley Mountains in first major drive against foe since Japanese landings in Buna, N.G.
- 30. Adolf Hitler assured reich his armies would capture Stalingrad and said nazi armies were prepared for second front.

OCTOBER, 1942

- 1. Pres. Roosevelt returned from secret two-week tour of country's war production centres and revealed war output had reached 95% of his objectives. ¶ Nazi army of 300,000 made new advances into northwest outskirts of Stalingrad but lost ground in populated locality south of besieged Russian city.
- 2. Anti-inflation bill, providing stabilization of farm prices and industrial wages, signed by Pres. Roosevelt three hours after congress put finishing touches on program. ¶ Vichy authorities decided to conscript French labourers to meet insistent nazi demands for 150,000 skilled workers in reich war plants.
- 3. Associate Justice James F. Byrnes of U.S. supreme court was named director of economic stabilization with sweeping authority to control U.S. civilian purchasing power. ¶ U.S. army forces, supported by naval units, occupied Andreanof Islands, 125 mi. from Japanese-held Kiska base. ¶ Premier Stalin, in letter to American newsman in Moscow, declared Allied aid to Russia was inadequate and not commensurate with soviet contribution in war.
- 4. Marshal Goering told Berlin audience that German people would be fed during forthcoming winter at expense, if necessary, of German-occupied nations.
- 5. Japanese landed "small reinforcements" on Guadalcanal under cover of darkness, U.S. navy disclosed. ¶ Australian troops occupied village of Kagi in New Guinea mountains and cleaned up Japanese troops in region. ¶ OPA announced over-all rent ceiling, covering whole nation, would go into effect Dec. 5. ¶ St. Louis Cardinals baseball team defeated New York Yankees, 4 games to 1, in 1942 world series.

- 10. U.S. army set up point system based on length of service, combat record and parenthood which was to determine eligibility for demobilization.
- 11. Gen. Eisenhower ordered that no combat soldiers who had fought in both North Africa and Europe were to be sent to Pacific. ¶ Two Japanese Kamikaze planes crashed on deck of U.S. aircraft carrier "Bunker Hill," causing 656 casualties.
- 12. Yugoslavia's action in occupying Trieste was denounced by U.S. Undersec'y of State Joseph C. Grew as "sudden unilateral" action running counter to Yalta accord.
- 14. Austrian provisional government declared its independence, abolished all nazi decrees and restored republican laws.
- 16. U.S. military government would apply policy of hard realism in administering its occupation zone of Germany, Lt. Gen. Lucius D. Clay, deputy military governor, disclosed.
- 18. Deportation of Fritz Kuhn, one-time leader of German-American bund in U.S., to Germany was announced by U.S. department of justice.
- 19. Chungking communiqué said Chinese troops had reoccupied port of Foochow.
- 21. Tension over Trieste dispute was relaxed when Yugoslav partisan forces evacuated Carinthia and Styria in Austria.
- 23. Pres. Truman reorganized cabinet; Thomas C. Clark succeeded Francis Biddle as attorney general; Lewis B. Schwellenbach succeeded Frances Perkins as secretary of labour; Rep. Clinton P. Anderson succeeded Claude Wickard as secretary of agriculture. ¶ Prime Minister Churchill and his cabinet resigned when Labourites refused to continue in wartime coalition cabinet; King George VI reappointed Churchill as prime minister; dissolution of parliament as of June 15 and general elections as of July 5 were announced. ¶ Adm. Doenitz' government was dissolved by Allied authorities; Doenitz, other members of his government and general staff were placed under arrest. ¶ Heinrich Himmler, nazi gestapo chieftain and interior minister who had been captured by British army troops, ended his life by swallowing poison.
- 25. Estimated 111 Japanese planes were shot out of air in Okinawa battle theatre in 48-hr. period by U.S. forces after enemy attack which caused damage to 11 light naval units. ¶ Prime Minister Churchill revised cabinet to fill vacancies caused by resignation of Labourite members.
- 27. Chinese troops recaptured inland treaty port of Nanking, Chungking announced. ¶ Adm. William F. Halsey's

- 28. Yokohama was raided for first time by superfortresses.
- 29. Damascus was shelled by French mortars as clashes between French troops and natives spread in Syria.
- 30. Shuri castle, keystone of Japanese defense line in Okinawa, was captured by U.S. marines. ¶ Maj. Gen. Curtis LeMay disclosed that 51 sq.mi. of Tokyo had been laid waste by six superfortress attacks. ¶ Iran government asked U.S., Britain and Russia to withdraw troops from country as war in Europe was over.
- 31. Prime Minister Churchill informed Gen. de Gaulle that British forces had been instructed to "intervene" in Levant states to end bloodshed and avoid threat to Allied lines to Pacific.

JUNE, 1945

- 1. Pres. Truman said that U.S. would have army of 7,000,000 men to hurl against Japan by 1946. ¶ City of Shuri was captured by U.S. 10th army on Okinawa. ¶ Gen. de Gaulle disclosed that he had ordered French troops in Levant to cease fire in compliance with British request.
- 2. Russian delegates insisted that permanent members of proposed United Nations council have right to veto discussion of international disputes.
- 4. Prime Minister Churchill opened electioneering campaign warning that a Labour government would establish totalitarian state employing some form of gestapo.
- 5. U.S., British, Russian and French commanders in chief "assumed supreme authority" over defeated Germany. ¶ Gen. de Gaulle's accusation of British meddling in Levant states was denied by Prime Minister Churchill who said British sought no territorial or other advantages in that zone.
- 7. Gen. Omar N. Bradley was designated to succeed Brig. Gen. Frank T. Hines as administrator of veterans' affairs.
- 9. Temporary tripartite military administration of Venezia Giulia, including Trieste, was agreed upon by U.S., Britain and Yugoslavia, state department announced. ¶ Marshal Zhukov said Adolf Hitler had married Eva Braun two days before Berlin's fall and that Russians "found no corpse that could be Hitler's." ¶ Premier Kantaro Suzuki stated Japan would fight to last rather than accept unconditional surrender. ¶ Disclosure that nazis had exterminated at least 80% of Germany's Jews was made by Allied military government authorities in Frankfurton-Main. ¶ Hoop, Jr., won Kentucky Derby.
- 10. Australian troops landed at four points on north-western Borneo in Brunei bay area.
- 11. Liberal party won heavy majority in Canadian elections, returning Prime Minister Mackenzie King's government to office.
- 14. Yaeju hill, key point in Japanese defenses on Okinawa, was captured by U.S. forces. ¶ Town of Brunei in northern Borneo was seized by Australian troops.
- 15. Clement Attlee, British Labour leader, accepted Prime Minister Churchill's invitation to attend Big Three parley in Potsdam as "friend and counsellor." ¶ Truk Island was shelled and bombed over 48-hr. period by units of British Pacific fleet.
- 16. Cabinet of Premier Achille van Acker resigned in protest over projected return of King Leopold to Belgium's throne.
- 18. Chungking communiqué announced that Chinese troops had recaptured port of Wenchow. ¶ Ruling that membership bylaws of Associated Press violated Sherman

antitrust act was upheld by supreme court. ¶ Order to deport Harry Bridges, west coast labour leader, was ruled illegal in supreme court decision.

- 19. Estimated 4,000,000 New Yorkers jammed line of march to welcome Gen. Eisenhower as he visited city.
- 21. Okinawa fell to U.S. 10th army after gruelling 82-day battle. ¶ Soviet court sentenced 12 of 16 Polish underground leaders, convicted of subversive activities, to prison terms ranging from 4 months to 10 years; 3 were acquitted and trial of fourth was postponed.
- 22. Gen. Joseph W. Stilwell was made commander of U.S. 10th army, succeeding Gen. Simon Bolivar Buckner, Jr., who had been killed in action, MacArthur announced. New Polish regime was formed in Moscow with Edward Osubka-Morawski as premier and Stanislaw Mikolajczyk as vice-premier.
- 23. Disclosure that U.S., Russia, Britain and China had agreed to permit entry of new Polish government into projected world league was made by Sec'y of State Stettinius.
- 24. Gen. Arnold asserted that U.S. must retain island air bases in Pacific for own defense.
- 25. Leo T. Crowley, foreign economic administrator, revealed that U.S. was continuing to supply Russia with lend-lease goods via Siberian ports.
- 26. United Nations concluded conference at San Francisco and each of its members signed charter designed to ensure lasting peace.
- 27. Edward J. Stettinius resigned as secretary of state and was named U.S. member of United Nations security council and chairman of U.S. delegation on general assembly.
- 28. Liberation of Luzon was announced by Gen. MacArthur after U.S. forces split last Japanese force in Cagayan valley into three isolated segments.
- 29. Ruthenia was ceded to Russia in agreement drawn up by Czechoslovak and soviet governments. ¶ Three German civilians, convicted by U.S. military court of slaying U.S. airman in Aug. 1944, were hanged by U.S. army executioners.
- 30. House of representatives voted 255 to 94 to continue OPA for another year and measure was speeded to Pres. Truman for signature. ¶ James F. Byrnes was named by Pres. Truman as secretary of state. ¶ Liuchow, former U..S air base in China, was recaptured from Japanese by Chinese troops.

JULY, 1945

- 1. Australian troops landed at Balikpapan, east Borneo oil centre.
- 2. Pres. Truman submitted United Nations charter to senate and urged that body ratify it quickly as only way to achieve enduring peace. ¶ Comdr. Harold E. Stassen said world peace lasting at least 50 years could be achieved if U.S. adopted wise course in its foreign policy.
- 3. U.S. and British troops began entering their respective zones of occupation in Berlin. ¶ Sec'y of State Byrnes asserted there would be no change in basic foreign peace policies as charted by Pres. Roosevelt.
- 5. Gen. MacArthur announced entire Philippines campaign could be regarded as closed, but admitted there would be isolated guerrilla action. ¶ Recognition of new Polish government of national unity sitting in Warsaw was announced simultaneously in Washington and London. ¶ U.S. military government seized assets and 24 plants of I.G. Farbenindustrie in its zone of occupation for ultimate disposition by four Allies ruling Germany. ¶ Henry

Morgenthau, Jr., resigned as secretary of treasury.

- 6. ODT issued order banning civilians from sleeping cars between points less than 450 mi. apart. ¶ Nicaragua became first nation to ratify United Nations charter.
- 10. Japanese home islands were attacked by estimated 2,000 army, navy and marine aircraft.
- 12. Compromise legislation designed to continue Fair Employment Practices committee for another year was voted by both houses of congress. ¶ Joseph Benedict Chifley was elected prime minister of Australia on first ballot by parliamentary Labour party.
- 13. U.S. government admitted full responsibility for sinking of Japanese relief ship "Awa Maru" and informed Japanese government it would discuss indemnity after war's end. ¶ Supreme headquarters, Allied expeditionary force, at Frankfurt-on-Main, were dissolved by Gen. Eisenhower.
- 14. Warships of U.S. Pacific fleet bombarded Japanese mainland for first time, hitting targets on northern Honshu and Hokkaido Islands. ¶ Soviet union and China reached understanding on many important questions, said Russo-Chinese joint communiqué issued in Moscow. ¶ Gen. Eisenhower relaxed order forbidding fraternization between U.S. soldiers and German civilians. ¶ Viscount Wavell, viceroy of India, declared Simla parley envisaging British proposals for greater Indian self-government had failed and assumed blame for failure.
- 15. Prime Minister Achille van Acker disclosed that King Leopold had informed Belgian leaders that he would neither return to Belgium nor abdicate throne.
- 17. British carrier task force joined U.S. 3rd fleet in attack "in great strength" on targets in Tokyo area. ¶ Pres. Truman was selected by Prime Minister Churchill and Premier Stalin to preside over Big Three conference that opened in Potsdam. ¶ Restoration of "traditional" monarchy at some future date was promised to Spain by Generalissimo Francisco Franco.
- 20. Pres. Truman, in speech at raising of U.S. flag in Berlin, said U.S. prime goal was to bring peace and prosperity to world. § Both houses of congress passed (1) Bretton Woods bill, (2) measure to increase Export-Import bank's lending authority from \$700,000,000 to \$3,500,000,000.
- 22. Domei news agency said Japan would be amenable to "fair arguments" in discussing peace proposals but would not be "intimidated" by threats, according to broadcast heard by FCC. ¶ State department disclosed that Japan had agreed to permit neutral observers to inspect its prisoner-of-war camps.

23. Fred M. Vinson was sworn in as secretary of treasury, succeeding Henry Morgenthau, Jr.

- 24. Two Japanese battleships and two cruisers were damaged by U.S. and British airmen of U.S. 3rd fleet's carrier forces that bombed Japanese naval base of Kure and other enemy anchorages in Inland sea. ¶ Maj. Gen. Curtis E. LeMay was named chief of staff to Gen. Carl Spaatz, commander of U.S. strategic air force in Pacific.
- 26. Churchill government was defeated in general elections by overwhelming Labourite majority; Clement R. Attlee became prime minister and pledged full co-operation in war against Japan. ¶ Pres. Truman and retiring Prime Minister Churchill, with concurrence of Generalissimo Chiang Kai-shek, called on Japan to accept unconditional surrender or face "prompt and utter destruction." ¶ Belgian chamber of deputies gave Premier Achille van Acker 95 to 68 vote of confidence.

- 27. Prime Minister Attlee appointed six Labour party leaders to his cabinet: Ernest Bevin was named foreign secretary; Arthur Greenwood, lord privy seal; Hugh Dalton, chancellor of exchequer; Herbert Morrison, lord president of council; Sir Stafford Cripps, president of board of trade; and Sir William Jowitt, lord chancellor. ¶ Chinese forces recaptured Kweilin, former U.S. air base city, Chinese high command asserted.
- 28. United Nations security charter was ratified by U.S. senate by 89 to 2 vote; Pres. Truman said senate approval of document advanced "cause of world peace." ¶ Earl Browder was formally deposed as president of Communist Political association and was replaced by William Z Foster.
- 29. U.S. cruiser "Indianapolis" was torpedoed and sunk by Japanese submarine; 880 men and officers were lost and 316 survivors were officially listed as casualties.
- 30. T. V. Soong resigned as foreign minister of China but retained concurrent post of premier; Wang Shih-chieh replaced Soong as foreign minister.
- 31. Pierre Laval, former Vichy chief, flew from Barcelona to Linz, Austria, where he surrendered to U.S. army. § Field Marshal Sir Harold R. L. G. Alexander was appointed by King George VI as governor general of Canada to succeed Earl of Athlone.

AUGUST, 1945

- 2. Agreement on measures (1) to reduce German industrial power to subsistence levels; (2) to permit Poland and soviet union to annex East Prussia and large part of eastern Germany and (3) to establish reparations scales was reached by Pres. Truman, Premier Stalin and Prime Minister Attlee at Berlin conference. ¶ 6,000 tons of explosives and incendiaries were dropped on four Japanese cities and oil centres by some 800 superfortresses.
- 3. Pres. Truman asserted no "secret agreements of any kind" were made at Big Three conference in Berlin.
- 6. First atomic bomb, said to have destructive force of more than 20,000 tons of T.N.T., was dropped on Japanese city of Hiroshima by U.S. plane. ¶ Pres. Truman asserted U.S. was prepared to obliterate with atomic explosives every major Japanese city unless Japan acceded to Potsdam ultimatum.
- 7. Marshal Josip Broz (Tito) told Yugoslav national assembly that "outmoded" monarchy was repudiated by majority of Yugoslavia and that King Peter would be barred from returning.
- 8. Soviet union declared war on Japan; Foreign Commissar Molotov declared Russia joined war against "Japanese aggression" to shorten conflict, reduce number of victims and facilitate early restoration of peace. ¶ Fourpower occupation machinery for rule of Austria was set up by U.S., Russia, Britain and France; system divided Austria, as well as Vienna, into four zones of occupation.
- 9. U.S. air forces dropped second atomic bomb on Japan; target for this attack was city of Nagasaki. ¶ Russia's far eastern army began hostilities at 12:10 A.M., launching strong drives against Japanese forces along eastern Soviet-Manchurian border.
- 10. White House announced that Japan had offered to surrender and that terms were being studied by U.S., Britain, Russia and China.
- 11. Pres. Truman said Allies agreed to Japanese surrender proposal on basis of Potsdam ultimatum, provided Hirohito submitted to authority of Allied commander in chief.
- 12. Chiang Kai-shek criticized "independent action" by Chinese communist commanders and instructed China's

Makeshift home set up by a Japanese family in Nagasaki on the site of their previous dwelling. The second atomic bombing of Japan, on Aug. 9, 1945, left an estimated 90,000 homeless in the city in addition to those who suffered death or injury

communist troops to remain at their posts and await further orders. ¶ Prime Minister Attlee said British would co-operate with Pres. Truman's proposal to keep secret of atomic bomb until complete control of weapon was assured.

13. U.S. 3rd fleet carrier planes resumed attacks on Tokyo area as Japanese government officials pondered Allied surrender terms. ¶ Program requesting establishment of Jewish state in Palestine, which was submitted to British government in May, was disclosed by World Zionist conference.

14. Japan accepted Allied unconditional surrender terms. ¶ Moscow radio disclosed China and soviet union signed friendship treaty. ¶ Marshal Pétain was sentenced to death with recommendation for mercy by Paris court after conviction on charges of intelligence with enemy. ¶ War Manpower commission abolished all manpower controls over employees, enabling employers to hire men at their discretion.

15. Emperor Hirohito broadcast to his subjects first announcement of Japan's decision to accept Allied unconditional surrender terms. ¶ Japanese cabinet of Premier Kantaro Suzuki resigned. ¶ Broad outlines of plans to speed up demobilization were announced by U.S. army, navy and marine corps. ¶ Government ownership of Bank of England and nationalization of mines were stressed in King George's address opening new Labour parliament.

16. Japanese army in Manchuria was ordered by Marshal Alexander Vasilevsky, commander of soviet far eastern armies, to surrender by Aug. 20. ¶ Seven wartime controls over commercial motor traffic were lifted by ODT.

¶ Relaxed wage controls were announced by Pres. Truman who urged labour and management to renew nostrike, no-lockout pledge until adequate substitute for WLB could be established. ¶ Joseph C. Grew resigned as undersecretary of state and Dean G. Acheson was named to succeed him. ¶ Soviet union and Poland signéd treaty which fixed new Russo-Polish frontier and which determined how they would share German reparations.

17. Prince Naruhiko Higashi-Kuni formed new Japanese cabinet which was sworn in at imperial palace. ¶ Gen. de Gaulle commuted death sentence imposed on Marshal Pétain to life imprisonment.

18. Pres. Truman vested OPA, WLB and department of agriculture with broad authority to take "vigorous action" to restore maximum production of civilian goods, collective bargaining and free markets.

19. Gen. Jonathan M. Wainwright was located by U.S. army parachute squad which landed at Japanese prisoner-of-war camp deep in Manchuria, it was disclosed in Chungking.

20. Ernest Bevin, British foreign secretary, in first speech before commons, said he would oppose any attempts to substitute one form of "totalitarianism" for another in Europe. ¶ WPB cancelled 210 controls which had restricted production of certain categories of consumers' goods in wartime.

21. Adm. Nimitz announced that all but 55 of Japan's 382 warships were damaged or destroyed by U.S. air and sea power during war. ¶ Pres. Truman ordered halt of lend-lease operations to all Allied governments.

22. Domei dispatch said atomic bombings killed 70,000 persons, wounded 120,000 others and left 290,000 homeless. ¶ Agreement to establish provisional international regime to govern Tangier was announced by U.S., Rus-

sian, British and French experts convening in Paris.

- 23. United Nations charter was ratified without dissenting vote by both houses of British parliament. ¶ Premier Stalin announced that Red army had won complete victory over Japanese in Manchuria and that fighting in that area had ended. ¶ British, U.S. and French troops formally entered Vienna to share in occupation of Austrian capital with soviet armies.
- 24. Prime Minister Attlee told house of commons that abrupt termination of lend-lease left Britain in "very serious financial position"; in Washington, FEA Administrator Leo T. Crowley disclosed six-point program to enable Britain to bridge transition, but asserted British well knew that lend-lease had to end with finish of war. \(\) WPB removed all controls on output of passenger motor cars. \(\) Britain was accused of denying Australia "equality of footing" in Japanese peace discussions by Herbert Vere Evatt, Australian minister of external affairs.
- 25. Nelson Rockefeller resigned as assistant secretary of state and was replaced by Spruille Braden, W.S. ambassador to Argentina. ¶ Pres. Truman and Gen. de Gaulle, in joint statement at White House, asserted their talks showed existing "fundamental harmony" between France and U.S. ¶ Bulgaria yielded to Allied recommendation to delay scheduled elections to democratize more thoroughly voting procedure.
- 26. Chinese nationalist forces entered Shanghai and Nanking, Chungking announced.
- 27. Congress was urged by Pres. Truman to continue draft of men between 18 and 25 for military service because of world crisis and to release veteran combat soldiers.
- 28. Mao Tse-tung, Chinese communist leader, arrived in Chungking for conference with Chiang Kai-shek designed to avert civil war. ¶ Occupation of Japan was begun by a force of about 150 U.S. soldiers who landed at Atsugi airfield.
- 29. Hermann Goering, Joachim von Ribbentrop, Hjalmar Schacht and 21 other nazi civilian and military leaders were indicted by Allied jurists as war criminals. ¶ Findings of army and navy inquiry boards on Pearl Harbor attack were released by Pres. Truman; probes indicated that lack of preparedness, confusion and lack of co-ordination between services combined to cause U.S. defeat in first blow of World War II; criticism of Gen. Marshall in army report was branded as "entirely unjustified" by Sec'y of War Stimson.
- 30. Gen. MacArthur landed in Japan and set up temporary headquarters in Yokohama. ¶ Government reduced red-point ration value for meat, cheese and fat. Pres. Truman urged congress to achieve equitable solution of lendlease debts. ¶ Pres. Truman asserted that country itself was just as much to blame as its military leaders for lack of preparedness that resulted in Pearl Harbor disaster.
- 31. Office of War Information was abolished by Pres. Truman who transferred some of its functions to state department. ¶ Sec'y of State Byrnes declared assumption that entire lend-lease debt to Allies would be cancelled was unjustified and warned against "generalizations" in connection with Pres. Truman's earlier lend-lease statement.

SEPTEMBER, 1945

- 1. Pres. Truman proclaimed Sept. 2 as V-J day.
- 2. World War II was officially ended as Japanese envoys signed formal surrender documents aboard U.S.S. "Missouri" anchored in Tokyo bay; Foreign Minister Mamoru

- Shigemitsu signed for Japanese government and Gen. MacArthur for Allies. ¶ Premier Stalin announced that defeat of Japan enabled Russians to regain southern half of Sakhalin Island and Kurile chain, both wrested from Russia in Russo-Japanese War of 1904. ¶ Japanese garrisons in Palau group, Truk, Rota and Pagan Islands surrendered to U.S. commanders.
- 3. Generalissimo Chiang Kai-shek declared that political armies would not be tolerated within China's borders.
 ¶ Gen. Tomoyuki Yamashita surrendered remnants of his Japanese army in Philippines to Gen. Jonathan M. Wainwright.
- 4. Gen. MacArthur issued directive instructing Japanese to speed demobilization of their armed forces. ¶ Japanese garrison on Wake Island surrendered to U.S. forces. ¶ Disclosure that U.S. had given tacit agreement to return of Sakhalin and Kurile Islands to soviet union was made by Sec'y of State Byrnes. ¶ Emperor Hirohito personally opened Japanese diet session with appeal to his people to "win confidence of world," and set up peaceful state. ¶ British dominions office in London announced that Lt. Gen. Sir Bernard Freyberg had been appointed governor general of New Zealand.
- 5. State department report accused Japanese of massacring, torturing and starving U.S. prisoners and asserted Japanese government virtually ignored 19 U.S. protests against atrocities. ¶ U.S. navy urged coppress to retain chain of nine bases won in Pacific and to establish six bases in Atlantic. ¶ Pres. Truman appointed Benjamin V. Cohen as counsellor in state department and Donald S. Russell and William Benton as assistant secretaries of state.
- 6. A 21-point legislative program, designed to achieve "as full peacetime production and employment as possible in most efficient and speedy manner," was contained in Pres. Truman's message to congress. ¶ Sinclair Oil corporation announced it had received 50-year concession from Ethiopia to develop country's oil resources. ¶ Paul V. McNutt was named high commissioner to Philippines.
- 8. Sec'y of Navy Forrestal objected to full disclosure of all Pearl Harbor facts on grounds it would compromise "sources of information" vital to national security.
- 9. Gen. MacArthur, outlining policy for ruling Japan, emphasized that he was over-all authority but that people and emperor would be permitted reasonable self-rule under Allied directives. ¶ Large contingents of U.S. troops marched into Tokyo as other U.S. forces landed in Korea and other sections of Japan and Japanese empire. ¶ Gen. Yasuji Okamura surrendered 1,000,000 Japanese troops to Gen. Ho Ying-chin, Chinese chief of staff in Nanking ceremony. § Lt. Gen. John R. Hodge received formal surrender of Japanese troops in U.S. occupation zone of Korea, and retained Japanese administrators in office to carry out his directives. ¶ Canada resumed meat rationing to assure adequate supplies for export to United Kingdom and liberated countries. ¶ Recommendation that U.S. share secret of atomic bomb was sent to Pres. Truman by 64 faculty members and research scientists of University of Chicago.
- 10. Emperor Hirohito was ordered by Gen. MacArthur to abolish Japanese imperial general headquarters as of Sept. 12. ¶ Foreign ministers of five Allied powers opened conference in London. ¶ Vidkun Quisling, Norwegian nazi, was sentenced to death in Oslo court for high treason.
- 12. Francis Biddle was appointed U.S. judge on board of international tribunal to try axis war criminals.
- 14. Premier Stalin, in interview with Sen. Pepper, asserted principal objectives of soviet union were to repair

war damages, rebuild industrial strength and raise standard of living. ¶ Ford Motor company virtually stopped production in all its plants because unauthorized strikes crippled output schedules.

18. Henry L. Stimson resigned as secretary of war and Pres. Truman designated Robert P. Patterson as his successor. ¶ Sen. Harold H. Burton of Ohio was named by Pres. Truman to supreme court. ¶ Pres. Truman placed War Labor board, U.S. Employment service and War Manpower commission under Sec'y of Labor Schwellenbach; and also merged Office of Economic Stabilization and Office of War Mobilization and Reconversion with John W. Snyder as over-all head.

19. Dean G. Acheson, undersecretary of state, asserted that U.S. government, not Gen. MacArthur's occupation forces, would determine policy on Japan. ¶ People of India were promised by Prime Minister Attlee that positive measures would be taken immediately after Indian elections to assure them full self-rule. ¶ William Joyce, who worked for nazis as radio broadcaster and was known to British as "Lord Haw Haw," was sentenced to be hanged for treason after three-day trial in Old Bailey. ¶ Eric A. Johnston succeeded Will H. Hays as president of Motion Picture Producers and Distributors of America, Inc.

22. Document issued by White House dated Sept. 9 called for strong political, economic and military curbs to eliminate Japan as menace to world peace. ¶ Japanese government was ordered to furnish U.S. authorities with complete data on its banks, insurance companies and imperial household finances. ¶ Gen. George S. Patton, Jr., declared in interview that he had "never seen necessity of denazification program" and compared "this nazi thing" to "Democratic and Republican election fight."

23. Withdrawal of British troops and incorporation of Anglo-Egyptian Sudan into Egypt was demanded by cabinet of Premier Mahmoud Nokrashy Pasha.

24. Strike of elevator operators of more than 2,000 buildings in Manhattan paralyzed commercial activity in New York's skyscraper district. ¶ Anglo-U.S. oil pact was signed in London by Harold L. Ickes, U.S. petroleum administrator, and Emanuel Shinwell, Britain's fuel minister.

25. Congress was asked by Pres. Truman to slash more than \$28,500,000,000 from war department's appropriations. ¶ Nazi party was declared illegal and abolition of all German armed forces as well as semi-military organizations was decreed in new Allied proclamation.

26. State of siege was revived in Argentina after government initiated wave of arrests in move to squelch growing discontent with totalitarian Perón government. ¶ Letter written by Pres. Roosevelt March 10 in which he said Spain could expect no help from U.S. as long as totalitarian Franco regime remained in power was made public by state department.

27. Emperor Hirohito shattered precedent and paid a visit to Gen. MacArthur. ¶ Foreign Economic administration was abolished by Pres. Truman.

28. War department announced that Gen. Wainwright had been named commander of east defense command.

29. Gen. Eisenhower urged that four Allied occupation powers take steps to prevent economic chaos in reich by bringing that nation to solvency at subsistence level. ¶ Survey asserting that U.S. occupation authorities in reich "appeared to be treating Jews as nazis treated them, except that we do not exterminate them," was made public by Pres. Truman; survey was made by Earl G. Harrison, U.S. representative on Inter-Governmental Committee on Refugees, after inspecting camps of displaced persons in

Germany. Pres. Truman acting on Harrison report directed Gen. Eisenhower, in letter dated Aug. 31, to alleviate "shocking" treatment of displaced Jews in Germany.

OCTOBER, 1945

1. All restrictions on fraternizing between Allied soldiers and Germans, save for certain bans on intermarriage, were relaxed by Allied control council.

2. Gen. Eisenhower's headquarters announced removal of Gen. Patton as U.S. 3rd army commander in Bavaria; Patton was replaced by Lt. Gen. Lucian K. Truscott, Jr. ¶ Council of five foreign ministers in London terminated parley with no accord on any major issues.

3. Prompt creation of atomic energy commission to regulate all phases of nuclear energy was urged by Pres. Truman in special message to congress. ¶ Foreign Commissar Vyacheslav Molotov of U.S.S.R. ascribed stalemate of council of foreign ministers to refusal of other delegates to accept soviet compromise plan to continue discussions. ¶ U.S. refusal to associate itself with Argentina because of latter's repudiations of international obligations resulted in postponement of Rio de Janeiro parley for concluding hemispheric military alliances.

4. Strike-bound properties of 26 oil-producing and refining firms were taken over by navy on Pres. Truman's orders. ¶ Batavia dispatches said Indonesian nationalists had taken over Surabaya and other Javanese cities.

5. Sec'y of State Byrnes attributed much of disagreement at council of foreign ministers to Russia's suspicions of western Allies.

6. Chinese communists charged Chiang Kai-shek's armies had attacked them, with Japanese aid, in communist-controlled territory of central China. ¶ Baron Kijuro Shidehara formed new Japanese cabinet and pledged full co-operation with Allied military authorities. ¶ Sir Walter Citrine was elected president of World Federation of Trade Unions.

8. Pres. Truman declared U.S. had no intention of disclosing to any other nation industrial secrets in manufacturing atomic bomb.

9. Warning that U.S. would court "disaster" if it disarmed was sounded by Gen. Marshall in his biennial report. ¶ Col. Juan Perón was compelled to resign all of his government posts by uprising of army forces in Argentine military base at Campo de Mayo.

10. Detroit Tigers defeated Chicago Cubs 9 to 3, thus winning baseball's world series by four games to three. ¶ New constitutional status for British Malaya, which would merge Malay states and Straits Settlements into a Malayan union and make Singapore independent colony, was announced by British colonial office.

11. Gen. MacArthur presented Premier Shidehara with five-point program designed to democratize Japanese institutions.

12. Gen. Anton Dostler of German general staff was sentenced to death by U.S. military court in Rome for ordering shooting of 15 U.S. soldiers without trial in March 1944. ¶ Announcement that members of nazi party would be deprived of vote was made by Gen. Eisenhower. ¶ Canadian income tax cut of 16% was among five important tax reductions announced by Finance Minister J. L. Ilsley.

13. 400 scientists at Los Alamos government laboratory warned in signed statement that efforts to keep secret of atomic bomb would lead to "unending war more savage than last." ¶ Indonesian people's army issued proclama-

tion calling for all-out guerrilla warfare in Batavia area of Java.

- 14. Allied armies took over Batavia and declared looting, sabotage and bearing of arms would be punishable by death.
- 15. Pierre Laval was executed by firing squad after his attempt to cheat executioners by taking poison failed.
- 17. Coal strike was ended at order of John L. Lewis, president of United Mine Workers of America. ¶ Col. Juan Perón was released by army and returned to Argentine political scene in former role as "strong man" of Farrell regime. ¶ Archbishop Damaskinos ended prolonged cabinet crisis in Greece by taking over government as provisional president.
- 18. Indictment of 24 nazi war leaders of Hitler's reich on charges of plotting against world peace was presented before international military tribunal. ¶ Sec'y of State Byrnes said U.S. would make no final decision affecting Palestine without prior and full consultation with both Arabs and Jews. ¶ International machinery to prevent rate wars was set up by 57 world air lines in Montreal conference. ¶ Port strike in New York was ended by National Maritime union after 18 days.
- 19. R.A.F. Marshal Sir Arthur W. Tedder was appointed chief of air staff and senior member of air council, succeeding retiring R.A.F. Marshal Lord Portal, British air ministry announced.
- 20. Chancellor Karl Renner's regime was recognized as de facto provisional government of Austria by Allied control council. ¶ Achmed Soekarno, Indonesian leader, called upon Pres. Truman to stop Netherlands from using lendlease equipment to put down Indonesian independence movement.
- 21. Revolutionary government headed by Pres. Romulo Bettancourt won solid control of Venezuela after brief period of civil strife. ¶ Communists emerged as strongest single party in French elections with Socialists and Popular Republican movement close behind.
- 23. Promises of substantial reductions in all categories of taxes were made to British people by Hugh Dalton, chancellor of exchequer.
- 24. United Nations world security organization came into being when soviet union ratified charter, which with legal majority of 29 ratifications became "law of nations." ¶ Vidkun Quisling was executed by Norwegian firing squad.
- 27. Pres. Truman said U.S. would not recognize government forced upon any nation by foreign power and asserted U.S. held atomic bomb as sacred trust. ¶ Netherlands government ordered Dr. Hubertus van Mook, acting governor general of Netherlands Indies, to initiate negotiations with Indonesian nationalists.
- 29. Getulio Vargas resigned as president of Brazil and José Linhares, chief justice of supreme court, assumed role as interim president until election.
- 30. Pres. Truman asserted U.S. industry could afford higher wages without increasing prices, but told labour not to expect as much money as they made during war boom era. ¶ Shoe rationing was ended by OPA. ¶ New Venezuelan government was recognized by U.S.

NOVEMBER, 1945

1. Plans to nationalize all British air transport and empire's communications system were announced by British Labour government. ¶ British intelligence officers said exhaustive investigation suggested that Adolf Hitler had

- married Eva Braun April 29 and that both committed suicide the following day in a bunker in Berlin.

- 28. U.S. army's policy on demobilization and occupation was defended by Sec'y of War Patterson, who asserted demobilization program equalled rate of discharge of any nation in world. ¶ Iran told U.N. security council that

soviet union had destroyed Tehran government's authority by retaining troops on Iran's soil. ¶ William Benton, ass't sec'y of state, protested decision of Associated Press and United Press to withdraw their news services from state department. ¶ 60-day state of siege was proclaimed by Chilean government after union riots in Santiago.

- 29. Lt. Gen. Sir Frederick E. Morgan was cleared of charges of anti-Semitism and restored as chief of U.N.R.R.A. operations in Germany. ¶ President Felix Gouin of provisional government of France received 514 to 51 vote of confidence from constituent assembly. ¶ Sec'y of State Byrnes confirmed that Roosevelt and Churchill had agreed at Yalta conference to return southern half of Sakhalin Island and Kuriles to soviet union after war.
- 30. Resumption of Jewish immigration to Palestine at rate of 1,500 persons monthly was announced by British government. ¶ U.N. security council agreed to permit soviet union and Iran to settle dispute over Azerbaijan by direct negotiation, but insisted on right to pass judgment on final agreements.
- 31. Sec'y of State Byrnes asserted that reports from Poland indicated security police were committing political murders. ¶ Maj. Gen. Eurico Gaspar Dutra was sworn in as president of Brazil. ¶ Plans for establishing coalition government for China were unanimously approved by political consultation conference in Chungking.

FEBRUARY, 1946

- 1. Andrei Vishinsky told U.N. security council that presence of British troops in Greece was threat to peace and urged their immediate withdrawal; Foreign Sec'y Bevin of Britain labelled charge as "preposterous" and said Moscow propaganda was greater threat to peace. ¶ Discovery of new "dark" star in universe was reported at 74th meeting of American Astronomical society at Columbia university. ¶ Sec'y of Interior Ickes asserted before Senate Naval Affairs committee that Edwin W. Pauley had told him he could raise large sums for campaign contributions if government halted efforts to secure title to tidelands oil. ¶ Hungary was proclaimed republic and Premier Zoltan Tildy was elected president by new Hungarian national assembly.
- 4. Gen. Tomoyuki Yamashita's appeal against death sentence, pronounced by U.S. military tribunal in Manila, was rejected by U.S. supreme court, 6 to 2.
 - 5. Rumanian government was recognized by U.S.
- 6. British and soviet delegates in U.N. security council reached compromise when Andrei Vishinsky, soviet delegate, agreed not to press charge on alleged British interference in Greece and British Foreign Sec'y Bevin agreed to withdraw demand that council absolve Britain of Russian charges. ¶ Pres. Truman warned that U.S., to prevent "mass starvation" in liberated European countries, faced prospect of getting along with less spirits, less pastry and less white bread. ¶ Fifteen of world's leading jurists were selected for International Court of Justice in balloting by members of U.N. general assembly and security council; Judge Green H. Hackworth was designated U.S. representative.
- 9. Premier Stalin announced new five-year plan with huge production boosts, predicted soviet scientists would not only catch up but surpass scientists abroad and set new goals for production of oil, coal, steel and pig iron. ¶ Panamá's resolution condemning Franco regime in Spain and barring its representation in United Nations was adopted by 45 to o vote in U.N. general assembly.

- 10. Strike of Western Union employees in New York city ended. ¶ Netherlands' offer to establish Indonesian commonwealth with pledge that Indonesians would obtain right of self-determination was disclosed in Batavia by Hubertus J. Van Mook, acting governor general.
- 11. Transit strike of nearly 10,000 employees paralyzed transportation in Philadelphia. ¶ Agreement for full and free development of world air transportation was signed by U.S. and Britain after four weeks of negotiation at Hamilton, Bermuda. ¶ Proposal to place U.N. permanent headquarters in general region of Westchester county, N.Y., and neighbouring Fairfield county, Conn., was voted 22 to 17 by U.N.'s headquarters committee. ¶ Publication of secret agreement made at Yalta revealed that Stalin asked and received concrete economic and territorial concessions as price of soviet union's entry into war against Japan. ¶ U.S. supreme court rejected Gen. Masaharu Homma's plea for intercession against decision of military commission that sentenced him to death for committing atrocities in Philippines.
- 12. Soviet proposal which would compel displaced persons to be returned to their native lands was defeated in U.N. general assembly; Mrs. Roosevelt led opposition to soviet measure. ¶ Blue Book issued by state department charged Argentine government gave active support to German war effort during war and continued to grant haven to nazis. ¶ British authorities proclaimed martial law in Calcutta in effort to quell rioting in which 14 persons were killed and 170 injured.
- 13. Soviet request for U.N. probe of Indonesian situation was rejected by U.N. security council. ¶ Harold L. Ickes resigned as secretary of interior after dispute with Pres. Truman over nomination of Edwin W. Pauley as undersec'y of navy; Ickes asserted he refused to remain in administration where he was "expected to commit perjury for sake of party." ¶ Earl Browder was expelled from U.S. Communist party for having "betrayed" Marxist-Leninist principles and for "deserting" to side of "American monopoly capitalism."
- 14. Pres. Truman announced new wage-price formula, permitting limited wage and price increases; to implement new policy Truman named Chester Bowles as director of Office of Economic Stabilization and Paul A. Porter as OPA administrator. ¶ Tugboat strike that crippled harbour activities and paralyzed normal business life in New York city for eight days was ended. ¶ U.N. general assembly adjourned its first session. ¶ W. Averell Harriman's resignation as U.S. ambassador to soviet union and his replacement by Lt. Gen. Walter Bedell Smith was announced by Pres. Truman.
- 15. At least 22 persons allegedly engaged in espionage harmful to Canada's security were arrested by Royal Canadian Mounted Police.
- 16. London session of U.N. security council ended on note of discord as soviet union vetoed Anglo-French agreement to withdraw their troops from Levant states.
- 17. Steel strike was ended when United Steel Workers (C.I.O.) and U.S. Steel corporation reached wage agreement; steel firm agreed to pay increase of 18½ cents hourly; in return steel firms were permitted to increase steel prices \$5 a ton. ¶ New Egyptian cabinet was formed by Ismail Sidky Pasha.
- 18. Thirty-two new cardinals were created by Pope Pius XII at secret consistory in Vatican City. ¶ Belgian elections resulted in political stalemate with majority won by left-wing coalition in chamber of deputies neutralized by

Christian Socialist majority in senate.

- 20. Soviet union admitted receiving data on atomic energy and radio location from Canada, but said information could have been found in Smyth report and charged it was "ridiculous" to assert that revelation of such information would threaten Canada's security. ¶ Pope Pius XII denounced "modern imperialism" as political philosophy that carried within it "germs which endanger very foundations of human existence"; pontiff also affirmed "supranational character of church and its world-wide unity."
- 21. Clashes between British troops and anti-British demonstrators in Cairo resulted in estimated 12 dead and scores injured. ¶ Police building in Tel Aviv was rocked by explosion as Palestinian terrorists renewed raids on police headquarters in both Tel Aviv and Haifa. ¶ Former Premier Risto Ryti and seven other former cabinet members were found guilty by special "people's court" of leading Finland to war against U.S.S.R.; Ryti was sentenced to ten years of hard labour.
- 23. Gen. Tomoyuki Yamashita, convicted as war criminal, was hanged near Los Banos, Luzon. ¶ Week-long strike of sailors aboard royal Indian navy ships ended with surrender of mutineers. ¶ U.S. navy high command confirmed verdict of court martial finding Capt. Charles B. McVay III guilty of negligence in loss of cruiser "Indianapolis," but remitted his sentence.
- 25. Formal agreement on military reorganization of China's armies was signed by Chungking and Chinese communist representatives and Gen. G. C. Marshall, U.S. mediator. ¶ Week-long rioting between Indians and British troops caused deaths of 228 persons and injuries to 1,047 others. ¶ Supreme court ruled 6 to 2 that U.S. military courts established under martial law in Hawaii lacked authority to try civilians.
- 26. Julius A. Krug was named secretary of interior by Pres. Truman.
- 28. Agreement providing for withdrawal of Chinese troops from Indo-China and ending of French extraterritorial rights in China was signed by French and Chinese governments. ¶ France endorsed U.S. proposal for Anglo-French-U.S. declaration on Spain and closed its Spanish frontier.

MARCH, 1946

- 2. Citizens of Greenwich, Conn., voted 5,505 to 2,019 to oppose establishment of permanent U.N. headquarters in their community.
- 4. U.S., Britain and France, in joint statement, called on Spanish people to oust Gen. Franco by peaceful means. ¶ Field Marshal Mannerheim's resignation as president of Finland was announced by Premier Paasikivi.
- 5. Winston Churchill, in speech at Fulton, Mo., advocated Anglo-American "fraternal association" to halt "expansive and proselytizing tendencies" of soviet union.
- 6. Draft of new Japanese constitution included clauses renouncing war "forever," prohibiting maintenance of armed forces, limiting emperor's powers and granting full civil rights.
- 7. Sec'y of State Byrnes accused soviet union of violating pledge to withdraw troops from Iran by March 2 deadline and called on Russia to evacuate completely all troops there.
- 9. Premier Juho K. Paasikivi was elected president of Finland by parliament.
- 11. Sec'y of State Byrnes challenged soviet assertion that U.S. had violated Moscow agreement in urging broadening of Bulgarian cabinet and expressed surprise that U.S.S.R. objected to "so fundamental and simple a proposition."

13. Winston Churchill was denounced as warmonger by Stalin, who said Churchill's speech at Fulton, Mo., was a "dangerous act" designed to sow discord among wartime allies. J Gen. Draja Mikhailovitch, Chetnik leader, was captured in mountain hide-out by Yugoslav forces. ¶ Hermann Goering admitted at Nuernberg trial that he did everything in his power to strengthen nazi movement and assure Hitler of his place as chancellor. ¶ Pres. Truman withdrew nomination of Edwin W. Pauley as undersecretary of navy at latter's request, but said Pauley emerged from "vicious and unwarranted attacks with integrity unscathed . . . and with honour unsullied." ¶ General Motors Corp. strike ended on 113th day of walkout when G.M. agreed to pay wage increase of 181/2 cents hourly to United Automobile Workers (C.I.O.). ¶ General Electric strike was settled when company and United Electrical Radio and Machine Workers (C.I.O.) agreed on 181/2-centsan-hour pay increase.

15. Winston Churchill renewed appeal for "fraternal" Anglo-American co-operation but denied he had ever aimed at war alliance between two countries; he also expressed belief that soviet union did not want war. ¶ Fred Rose, member of parliament, was arrested by Canadian government on charge of acting as intermediary for soviet espionage ring. ¶ Prime Minister Attlee renewed offer of complete independence to India but specified Indians first must agree among themselves on future constitution before Britain would grant freedom.

16. Foreign Sec'y Bevin said his offer to extend Soviet-British alliance to 50 years was "seriously proposed and seriously meant." ¶ Gen. Marshall reported, on return to Washington, that situation in Manchuria was "extremely critical," with Chinese communists and Nationalists fighting for control of areas evacuated by soviet troops. ¶ Soviet authorities informed Denmark that Red army would evacuate Bornholm Island as soon as Denmark was in position to take it over. ¶ Announcement that U.S. would enter no alliance to maintain its security, either with Britain against soviet union or with soviet union against Britain, was made by Sec'y of State Byrnes, who added U.S. would seek "path to enduring peace" in United Nations.

17. Progressive party of Wisconsin voted by overwhelming majority to rejoin Republican party.

18. Bernard Baruch was appointed by Pres. Truman to become U.S. member of U.N. atomic energy commission.

19. Iran formally notified U.N. security council that it had a dispute with soviet union over question of presence of Russian troops on Iranian soil. ¶ Mikhail I. Kalinin retired as chairman of presidium of supreme soviet of soviet union and was succeeded by Nikolai M. Shvernik. ¶ Soviet union and Switzerland re-established diplomatic relations after 22-year break.

20. Soviet union asked for postponement of U.N. security council meeting to April 10 on grounds that negotiations were continuing with Iran over troop evacuation.

21. Fiorello H. La Guardia was named director general of U.N.R.R.A., succeeding Herbert H. Lehman.

22. Prime Minister Stalin affirmed confidence in U.N. as "serious instrument" for preserving peace, declared that no nations desired war but asserted some "political groups" were fostering discord throughout world. ¶ Pres. Truman announced that atomic bomb tests at Bikini atoll, scheduled for May 15, had been postponed six weeks.

23. W. Averell Harriman's appointment as U.S. ambassador to Britain, succeeding John G. Winant, was announced at White House; Winant was appointed U.S. representative to U.N. economic and social council. ¶ Chi-

nese Foreign Minister Wang Shih-chieh disclosed soviet notification that withdrawal of Red army forces from Manchuria would be completed by end of April.

24. Soviet union announced its troops were evacuating Iran and that withdrawal would be complete in six weeks.

25. U.N. security council, holding first session in U.S., heard Pres. Truman pledge full U.S. support and Sec'y of State Byrnes declare no nation had right to treat questions affecting world peace as "questions of honour which cannot be discussed."

26. Lt. Nicolai G. Redin, soviet officer, was arrested in Portland, Ore., by F.B.I. on espionage charges.

27. Andrei Gromyko, soviet delegate, walked out of U.N. security council session after delegates rejected by 9 to 2 vote soviet proposal to postpone discussion of Iranian case to April 10. ¶ Walter Reuther was elected president of United Automobile Workers (C.I.O.), defeating R. J. Thomas (incumbent) by narrow margin.

28. Col. Juan D. Perón won sufficient electoral votes in Argentine elections to assure him presidency.

30. Some 800 Germans were arrested in U.S. and British zones of Austria and Germany in raid designed to crush attempt of some nazis to revive party.

APRIL, 1946

- 1. Estimated 400,000 soft coal miners of U.M.W. (A.F. of L.) went on strike after operators and union delegates failed to agree on latter's demands for health and welfare programs and wage increases. ¶ Disclosure that U.S. would give up all bases it had built in Cuba during war was made by Sec'y of State Byrnes. ¶ Rep. B. Carroll Reece of Tennessee was elected chairman of Republican national committee.
- 4. Soviet union's assurance to evacuate all its troops from Iran by May 6 was accepted by U.N. security council, which deferred discussion of dispute. ¶ Pope Pius XII said one-quarter of world faced famine and warned that unless adequate food was shipped to hunger areas, political disorders would arise.
- 5. "Complete agreement" on all Russo-Iranian questions and formation of Russo-Iranian oil company was announced in joint communiqué of Moscow and Tehran governments. ¶ U.S. request that U.S. officers be allowed to testify at trial of Gen. Draja Mikhailovitch was refused by Yugoslav government.
- 6. Pres. Truman warned intense Anglo-Soviet rivalry in near east could bring war and said U.S. military power would be used to back up United Nations in defending sovereignty of that area from threats of coercion and penetration. ¶ Andrei Gromyko, soviet delegate, requested U.N. security council to remove Iranian dispute from its agenda.
- 8. State department announced U.S. was prepared to join Argentina in hemispheric defense treaty provided latter's government carried out pledges to eliminate "axis influences." ¶ Congress was warned by Gen. Eisenhower that failure to extend selective service after May 15 deadline would represent gamble with nation's safety and world peace.
- 9. Hugh Dalton, chancellor of exchequer, presented budget which he said was drawn on assumption Britain would get loan from U.S. ¶ George S. Messersmith was named U.S. ambassador to Argentina and William D. Pawley ambassador to Brazil.
- 10. Andrei Gromyko was released from duties as soviet ambassador to U.S. to devote all his time to post as dele-

766 gate to U.N. security council; Nikolai V. Novikov succeeded Gromyko as ambassador. ¶ Oscar Lange, Polish delegate, formally filed charges before U.N. security council that Franco Spain was endangering world peace. ¶ Marshal Georgi K. Zhukov's replacement by Gen. Vassily D. Sokolovsky as soviet member of Allied control council in Berlin was announced in Moscow.

> 12. Pres. Truman, in ceremony commemorating first anniversary of Franklin D. Roosevelt's death, pledged self to govern "not for benefit of privileged few but for welfare of all the people." § Japan's two principal conservative parties-Liberal and Progressive parties-won control of diet in first general election after end of World War II. ¶ Viscount Alexander of Tunis was sworn in as governor general of Canada.

> 14. Gen. Chou En-lai, military leader of Chinese communists, asserted his party did not recognize Chinese National government's right to drive Chinese communists out of Manchurian areas evacuated by soviet forces. ¶ German Social Democrats in U.S., French and British zones of Berlin joined German communists to form new party.

> 17. Poland asked U.N. security council to have all member states break diplomatic relations with Franco Spain.

> 18. League of Nations was voted out of existence by delegates of 34 nations at final meeting of body in Geneva. ¶ Marshal Tito's government in Yugoslavia was accorded full diplomatic recognition by U.S. ¶ Predominantly royalist government in Greece was formed by Constantin Tsaldaris, new premier.

> 20. Pope Pius XII exhorted Catholic Action youth delegates in Italy to battle "anti-Christian" forces in politics in what was interpreted as plea to Italian Catholics to vote against communists in national elections. ¶ Chinese National government spokesman acknowledged fall of Changchun to Chinese communists.

> 22. Senator Vandenberg urged senate to approve proposed credit of \$3,750,000,000 to Britain. ¶ Owen J. Roberts, former supreme court justice, belittled U.N. as instrument of peace and urged U.S. to take lead in calling international parley for establishment of world government to outlaw war and curb armaments.

> 23. Rejection of plea to remove Iranian dispute from agenda in U.N. security council led soviet delegate, Andrei Gromyko, to announce that Russian delegation would refuse to participate in any future talks on Iranian controversy. ¶ Body of Benito Mussolini was stolen from unmarked pauper's grave.

> 24. U.S. state department disclosed that it had concluded agreement to grant \$90,000,000 credit to Poland provided elections in that country were "free and unfettered." ¶ More rigid discipline among U.S. troops in Europe was ordered by Gen. Joseph T. McNarney.

> 25. Conference of foreign ministers of U.S., soviet union, Great Britain and France opened in Paris.

> 27. Manuel A. Roxas, president-elect of Philippines, said he proposed policy of co-operation with U.S. in far east and with United Nations. I Plan to limit future size of Italian fleet was agreed upon by foreign ministers of U.S., soviet union, Britain and France in their Paris conference.

> 28. Manchurian rail hub of Tsitsihar was reported captured by Chinese communist armies.

> 29. Sec'y of State Byrnes at meeting of foreign ministers in Paris proposed four-power treaty which would guarantee disarmament of Germany for 25-year period. ¶ Resolution expressing moral condemnation of Franco regime

in Spain was voted unanimously by ten members of U.N. security council, with soviet union abstaining. ¶ Gen. Hideki Tojo and 27 other members of Japanese militarist clique were formally indicted on 55 counts, by Allied court in Tokyo.

30. Prime Minister Stalin asserted soviet union would be true to policy of peace and security but stated "international reaction" was "hatching plans for new war." ¶ Recommendation that 100,000 Jews be permitted entry into Palestine as soon as possible was contained in report issued by Anglo-American Committee of Inquiry. ¶ Dr. Hjalmar Schacht told International Military Tribunal sitting at Nuernberg that Adolf Hitler had "deceived world, Germany and me."

MAY, 1946

1. Sec'y of State Byrnes proposed and Foreign Minister Molotov rejected cut of occupation armies of four powers in Austria to 15,000 men each, at foreign ministers conference in Paris. I Pres. Truman's bill for merging armed services was criticized by Sec'y of Navy Forrestal on ground it might open way for "ambitious" officer in post of supreme chief of staff to mould military "and possibly national policy to suit his ends." ¶ Hugh Dalton, chancellor of exchequer, was appointed by British cabinet as a governor of International Monetary fund and bank.

2. Emergency brown-outs were decreed in Illinois and northern Indiana in move to economize on fuel during coal strike.

3. War crimes trial of Gen. Hideki Tojo, former premier, and 25 other Japanese defendants before International Military court started in Tokyo. ¶ U.N. security council was formally notified by France and Britain that all their troops had been withdrawn from Syria 15 days ahead of schedule. ¶ Vice-Premier Edward Kardelj told Paris council of foreign ministers Yugoslavia would reject any solution of frontier dispute with Italy that would put Slavic minority under Italian rule. ¶ Sec'y of State Byrnes's proposal for four-power pact to rule Germany was criticized by Tass, official soviet news agency, as potential screen behind which U.S. could retreat from its Potsdam commitments. ¶ Reconstruction loan of 20,000,000,000 rubles, including rich lottery prizes, was floated by soviet government. J Ichiro Hatoyama, president of Japan's Liberal party, was banned from taking seat in imperial diet by order of Gen. MacArthur.

4. Revolt of convicts in Alcatraz federal prison was quelled with aid of U.S. marines after two-day battle; three convict ringleaders and two guards were killed and 14 other persons wounded. ¶ Soft coal strike was called "national disaster" in OWMR report which said effects of walkout would damage reconversion progress.

5. New French constitution sponsored by Socialist and Communist parties was rejected in referendum by more than 1,000,000 votes. J Mariano Ospina Pérez, Conservative party candidate, was elected president of Bolivia. ¶ Representatives of Hindu Congress party, Moslem league and British officials opened Simla parleys designed to find agreement on basic issue of unified India.

6. Program under which U.S. would arm, train, organize and equip armies of other western hemispheric states was outlined by Pres. Truman in message to congress. ¶ Pulitzer prize for best play of 1945-46 was awarded to State of the Union by Russel Crouse and Howard Lindsay. ¶ Hussein Ala, Iranian envoy to U.S., told U.N. security council soviet refusal to permit observers into Azerbaijan province prevented Iranian government from ascertaining whether all red army troops had evacuated the province.

7. British delegation in Cairo proposed evacuation of all British armed forces from Egypt in return for mutual aid alliance with Egyptian government to become operative in event of war. ¶ Cession of Transylvania to Rumania was unanimously approved by Big Four's council of foreign ministers at Paris. ¶ Winston Churchill urged western democracies to move together toward understanding with soviet union within framework of United Nations.

8. U.S.-Soviet conference in Seoul (Keijo) to establish interim government for Korea (Chosen) broke down.

9. Pres. Truman denounced walkout of coal miners as nearing status of strike against government. ¶ Victor Emmanuel III abdicated as king of Italy in favour of his son, Crown Prince Humbert.

10. Coal operators accepted two-week truce in soft coal strike offered by John L. Lewis, president of United Mine Workers. ¶ Soviet occupation authorities agreed to sharp reduction of their occupation costs and to provide U.N.R.R.A. with oil for its Austrian program. ¶ U.S. state department received sharp note from Arab league which demanded right to be consulted on future of Palestine. ¶ Huge 14-ton German V-2 rocket climbed almost 75 mi. in test of missile at White Sands proving grounds in New Mexico.

11. Pres. Truman in New York speech warned atomic bomb would remain "frightful weapon" to "destroy all of us" unless peoples of world learned to live together peacefully.

12. Simla parleys ended in failure when Hindu and Moslem parties were unable to reach common ground on plans for independent unified India. ¶ Young women of Italy were urged by Pope Pius XII to vote only for parties pledged to "respect rights of God and religion," in forthcoming Italian national elections.

13. Allied military government of Germany ordered destruction by Jan. 1 of all German military and nazi memorials and confiscation of all books glorifying naziism or militarism. ¶ Fifty-eight operators of Mauthausen concentration camp were convicted by U.S. military court in Dachau for torture and murder of thousands of imprisoned

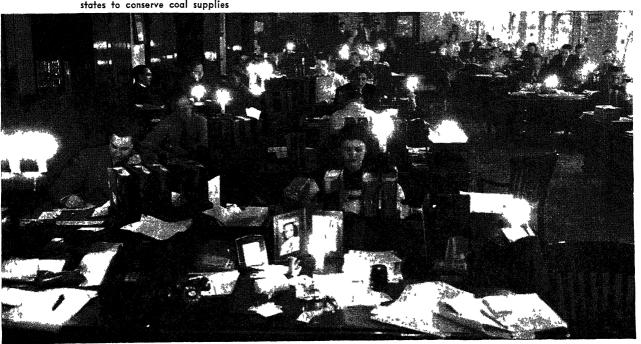

Office employees at Chicago, Ill., working by candlelight during the soft coal strike in May 1946. A dimout was imposed on 22 states to conserve coal supplies

victims, and were sentenced to die on gallows. ¶ Disclosure that atomic bombs which would be used in Bikini atoll tests were no more powerful than atomic missile dropped on Nagasaki, was made by Joint Army-Navy Task Force I. ¶ Demand for 7% levy on coal industry's annual \$1,000,000,000 pay roll for health and welfare fund was made by John L. Lewis, president of U.M.W. ¶ Gen. Ho Ying-chin resigned as chief of staff of China's Nationalist army.

14. Pres. Truman signed bill to extend selective service act to Sept. 1; this act banned induction of fathers and 18- and 19-year-old youths. ¶ Wheat program for 1946-47 issued by Sec'y of Agriculture Anderson requested continued food-saving measures throughout coming year. ¶ Warning that United Steelworkers of America (C.I.O.) would not tolerate interference by outside groups—"whether they be Communist, Socialist or any other group"—was issued by C.I.O. President Philip Murray.

15. Soviet delegate to Allied council for Japan was advised by George Atcheson, Jr., U.S. delegate, that U.S. does not favour communism "in United States or Japan." ¶ Continued disagreement on virtually all fundamental issues resulted in adjournment of Paris conference of foreign ministers to June 15. ¶ Gen. MacArthur was accused by Lt. Gen. Kuzma Derevyanko, soviet member of Allied control council, of failing to carry out Moscow conference terms by refusing to give council adequate notification on his directives. ¶ Joint letter drafted by Sen. David I. Walsh and Rep. Carl Vinson, chairmen of senate and house naval affairs committee, respectively, to Sec'y of Navy Forrestal said congress would not approve single department of common defense.

16. British white paper rejecting Moslem and Congress party plans for Indian government, set forth six-point plan as basis for constitution to be drafted by Indians, but rejected Moslem demand for Pakistan (separate state). ¶ Pres. Truman denounced draft measure as "bad legislation"; he also authorized induction into armed forces of childless men between 26 and 29 years. ¶ Pres. Truman's proposal that coal operators and miners submit their dis-

768 pute to arbitration was rejected by both parties. § Plans for extensive reorganization of government and recommendation for substantial enlargement of Federal Security agency and its eventual elevation to department status were given to congress by Pres. Truman. ¶ Foreign Minister Shigeru Yoshida succeeded Baron Kijuro Shidehara as Japan's premier; Yoshida retained foreign ministry portfolio. I Congressional action to outlaw strikes for at least six months was asked by Director John D. Small of Civilian Production administration.

> 17. Railways of U.S. were seized by Pres. Truman as emergency measure after railway unions refused to call off strike scheduled for May 18. J A.F. of L. pledged full support to its affiliate U.M.W. in labour dispute with coal operators. ¶ News dispatches from Washington suggested U.S. proposed that Canada join two-nation defense agreement for protection of North America, with special emphasis on Arctic frontiers. § Documentary evidence branding Franco Spain as cause of international friction and as constant threat to world peace was made public by special U.N. subcommittee. ¶ U.S. people were called on by Herbert Hoover to make great sacrifices to help save 800,000,000 people of world from "grimmest spectre of famine" in history. ¶ British cabinet mission's proposal for India union was approved by Mohandas K. Gandhi who said scheme was "seed to convert this land of sorrow into one without sorrow and suffering."

> 18. Railway unions postponed nation-wide strike for five days at behest of Pres. Truman.

> 19. Manila dispatches disclosed that Hukbalahap organization was conducting small-scale civil war against Philippine army's military police. ¶ Warning that Spain would not permit itself to be "Frenchified" and an appeal to people to throw out "foreign influences" were made by Gen. Franco in speech at Oviedo. I British foreign office confirmed reports that Gen. Wladyslaw Anders' Polish army in Italy would be sent to Britain for demobilization.

> 20. Declaration that U.S. would submit problem of world peace settlements to U.N. general assembly unless Big Four convoked peace conference in summer of 1946 was made by Sec'y of State Byrnes. ¶ Premier Ghavam es-Saltaneh of Iran admitted outbreak of fighting between Iranian government army and Azerbaijan forces. ¶ Proposal that new world food agency be established, that U.N.R.R.A. cease its work by Sept. 1 and that "normal" world trade in food and farming supplies be restored were made by Herbert Hoover.

> 21. Sec'y of Interior J. A. Krug was ordered by Pres. Truman to seize soft coal mines; Vice-Adm. Moreell was placed in charge of administering mines for government. J U.N. security council was officially notified by Hussein Ala, Iranian ambassador to U.S., that red army troops had evacuated all of Iran by May 6. J Sen. Vandenberg hailed what he termed positive, constructive and bipartisan U.S. foreign policy that emerged from Big Four meetings of foreign ministers in Paris. J 372 Danube river ships flying flags of many nations were seized by U.S. constabulary in U.S. zone of Germany.

> 22. Railway management and 18 of 20 railroad unions accepted Pres. Truman's suggested compromise of 181/2 cents increase per hour in wages; leaders of trainmen and engineers unions rejected proposal. § Soviet Iranian controversy was kept on agenda of U.N. security council after majority announced they were not satisfied as to whether Red army evacuation of Iran had been completed.

23. Nation-wide railroad strike began after heads of trainmen and engineers unions rejected Pres. Truman's request they remain on job until arbitration settled differences. ¶ Earl Browder, former U.S. communist leader, told correspondents in Moscow that his visit to Russia was to discuss publishing venture and that it had no political connotations.

24. Iran was notified by soviet ambassador at Tehran that Red army had completed its evacuation of nation by May 9. 9 Pres. Truman threatened to call out army if railroad strikers did not return to jobs by 4 P.M. E.S.T.,

May 25.

25. Pres. Truman appeared before joint session of congress and asked for temporary emergency powers to break strikes against federal government in any specified industry; he also requested authority to draft strikers into armed services and urged congress to formulate long-range labour policy designed to cut down work stoppages; acting on president's speech, house of representatives passed requested strike curbs by vote of 306 to 13; senate sidetracked measure which met strong opposition from both labour and conservative elements. ¶ Forty-eight hour national railroad strike was settled, with unions accepting Pres. Truman's proposed wage increase of 181/2 cents an hour. ¶ Addressing first session of U.N. economic and social council in U.S., Pres. Truman said its task was to achieve "freedom from want . . . to assure higher standards of living . . . and to promote fuller recognition of dignity and worth of human person." ¶ Emir Abdullah became King Abdullah Ibn-Hussein of Trans-Jordan in ceremonies at Amman, capital of new middle east kingdom.

26. Left-wing parties emerged victorious in Czechoslovak general elections, with communists receiving twice as many votes as any other single party. § A. F. Whitney, president of Brotherhood of Railroad Trainmen, denounced Pres. Truman as "political accident" and said his union had authorized him to spend \$2,500,000 to defeat every member of congress who voted for president's restrictive labour legislation.

27. Blunt charges that Anglo-U.S. "bloc" was waging offensive at Paris conference of foreign ministers against soviet union were made by Soviet Foreign Minister Molotov. ¶ U.S. bakers were ordered by department of agriculture to reduce size of bread loaves and rolls by 10% on

28. Agreement whereby U.S. would grant France credits totalling about \$1,400,000,000 was signed in Washington by Sec'y of State Byrnes and Léon Blum, special French emissary. ¶ Gen. Eisenhower and Adm. Nimitz urged congress to pass legislation permitting close military and economic collaboration among western hemisphere nations. ¶ Siam's appeal to U.N. for assistance in halting French invasion and occupation of strip of Siamese territory on Indo-China frontier was made public by U.N. security council. ¶ Sec'y of State Byrnes denied Soviet Foreign Minister Molotov's assertion that there was any Anglo-U.S. bloc and declared that U.S. invited British and soviet co-operation.

29. Francis J. Case strike control bill was approved by house of representatives by vote of 230 to 106 and sent to Pres. Truman for signature. I Forty-five-day coal strike ended when John L. Lewis signed contract with U.S. government under which U.M.W. was granted 181/2 cents hourly wage increase and establishment of welfare and retirement fund financed by operators by payment of 5 cents per ton. ¶ Hussein Ala, Iranian ambassador to Washington, was ordered by his government to refrain from making statements before U.N. security council on SovietIran dispute. ¶ Andrei Gromyko, soviet delegate to U.N. security council, said tendency of certain nations to play dominating part in U.N. was detrimental to "cause of peace and security." ¶ House foreign affairs committee was told by Sec'y of State Byrnes that U.S. foreign policy would be directed toward reduction of world armaments to level consonant with maintenance of internal order and external peace and security.

30. Georgia's legal department was ordered by Gov. Ellis Arnall to take action to revoke state charter of Ku-Klux Klan. ¶ Appeal to both Chinese communists and nationalists to lay down arms was issued by Gen. Marshall, special U.S. emissary, who warned China was on verge of "even greater calamity than World War II." ¶ Leaders of seven Arab League states announced their unanimous rejection of further Jewish immigration to Palestine.

31. Disclosure that Premier Stalin had rejected on grounds of ill health two presidential invitations to visit U.S., was made by Pres. Truman. ¶ U.S. and Britain sent parallel notes to Rumania asking government to promulgate new electoral law, set date for elections and assure fair and free vote.

JUNE, 1946

- I. Sen. Brien McMahon's bill for national civilian control of atomic energy was passed by senate in voice vote. ¶ Pope Pius XII, on eve of French and Italian general elections, appealed for voting against "state absolutism" and "wreckers of Christian civilization." ¶ U.N. subcommittee, declaring that Franco regime was potential menace to world peace, proposed that U.N. general assembly direct collective break in diplomatic relations with Spain unless Franco government was withdrawn and Spanish people freed by September. ¶ French foreign office asked U.S. and Britain to advise Siam that its government had not returned territories acquired from Laos and Cambodia in 1941. ¶ Gen. Ion Antonescu, former dictator, and three other Rumanian officials convicted as war criminals by Rumanian People's court, were executed.
- 2. Popular Republican party won majority of seats in French elections for new constituent assembly, with Communist and Socialist parties second and third respectively. § Gen. Eisenhower branded as "vicious" talk as to where, how and why next war would be fought. § Pres. Truman was urged by Philip Murray, C.I.O. president, to veto Case labour disputes bill on ground measure was dangerous to public welfare as well as to labour. ¶ Harry Bridges, president of I.L.W.U. and Joseph Curran, president of N.M.U., appealed to dock workers throughout world to support C.I.O. maritime unions if they went on strike. ¶ Statement attributed to Allied source in Nuernberg said soviet union already had demobilized more than 10,000,000 men from its armed services and planned to reduce current army of 6,000,000 to 4,500,000.
- 2-3. Majority of Italians voted for republic to replace monarchy in nation-wide referendum; official figures were 12,182,855 votes for republic and 10,362,709 votes for monarchy.
- 3. U.S. Chamber of Commerce asked Pres. Truman to approve Case labour disputes bill. ¶ Supreme court unanimously overruled convictions for contempt of court obtained against Miami newspaper for having criticized Florida judicial procedures. ¶ Pres. Truman told Nikolai V. Novikov, new soviet ambassador to U.S., that he would be happy if U.S.S.R. would give U.S. proposals same "sympathetic consideration" that U.S. would give soviet suggestions. ¶ Resignation of Edward R. Stettinius, Jr., as U.S. delegate to security council accepted by Pres. Truman.

- 4. Juan Domingo Perón was installed as 29th president of Argentina. ¶ Ernest Bevin, British foreign secretary, charged that soviet union believed it would achieve security only when "every country in world is patterned on soviet model." ¶ Eugene Meyer, publisher, was elected first president of International Bank for Reconstruction and Development.
- 5. Winston Churchill, in house of commons debate, supported Labour government's foreign policy and charged that seeds of World War III were being sown in Russian-occupied Europe. ¶ Spanish government, in communiqué to U.N. diplomats, challenged security council's authority and termed subcommittee's report condemning Franco regime "offensive." ¶ Sen. Warren R. Austin of Vermont was named U.S. representative on U.N. security council, succeeding Edward R. Stettinius, Jr. ¶ Pres. Truman was urged by Protestant delegation to recall Myron C. Taylor as his personal representative to Vatican on grounds that his mission there was "contrary to historic American principle of separation of church and state."
- 6. Fred M. Vinson was named by Pres. Truman as chief justice of U.S. supreme court; John W. Snyder was named secretary of treasury. ¶ Trygve Lie, secretary general of U.N. security council was given extraordinary powers to intervene in council debates. ¶ Argentina and soviet union resumed diplomatic relations after 28-year lapse.
- 7. Rumania answered U.S. state department note on voting with assertion nation was "eager" to hold elections and implied U.S. note was influenced by foreign propaganda. ¶ Widespread terrorism in Burma was laid to activities of "armed bandits" said Arthur Henderson, undersecretary of state for India.
- 8. Breakdown in Dutch-Indonesian negotiations was implied as President Achmed Soekarno of Indonesian republic broadcast appeal to his followers to mobilize against Dutch.
- 9. Gen. Eisenhower in speech at Northfield, Vt., urged complete support of U.N. but warned there was "obvious limit to our unilateral disarmament." ¶ Trygve Lie, U.N. secretary general, said in Detroit speech immediate task of U.N. was to forestall war; continuing task was to prevent "dangerous political conditions from ever arising."
- 10. Justice Robert H. Jackson at Nuernberg news conference attacked Justice Hugo Black for participating in decisions affecting former law partner and warned continuation of such practices would bring U.S. supreme court into disrepute. ¶ U.S. supreme court affirmed conviction of three leading U.S. tobacco companies for violation of antitrust act.
- 11. Case labour disputes bill was vetoed by Pres. Truman who charged measure struck only at symptoms, not underlying causes, of industrial strife and would not halt strikes; presidential veto was sustained when house of representatives failed to get necessary two-thirds majority to override it. ¶ Gen. Draja Mikhailovitch at his trial for treason in Belgrade court admitted he had contact with Germans and Yugoslav puppet government in 1941, but insisted he was trying to lure Quislings to join his forces.
- 12. British Labour party conference at Bournemouth gave overwhelming support to Foreign Secretary Ernest Bevin's foreign policy; Bevin asserted Russians rebuffed his earnest efforts at friendliness and implied rejection of Anglo-U.S. committee's Palestine report, stating that he would have to put another division in Holy Land to safeguard 100,000 Jewish immigrants.

13. King Humbert left Italy after reign of only 35 days; results of Italian elections, which favoured democracy over monarchy, forced his departure. ¶ U.N. subcommittee's compromise plan on Franco Spain was rejected and branded as cowardice by Andrei A. Gromyko, soviet delegate to security council. ¶ War department disclosed radioactive isotopes produced from atomic pile at Oak Ridge, Tenn., would be made available for medical and biological research.

14. U.S. atomic program outlined by Bernard M. Baruch, chief U.S. delegate, at first meeting of U.N. atomic energy commission, contained formal offer to surrender store of atomic bombs and to turn over all atomic secrets to world Atomic Development Authority under which no nation would have veto power. ¶ U.S., Britain and France accepted Soviet frontier with Rumania at Big Four meeting of foreign ministers in Paris. ¶ Pres. Truman said U.S. would have no official representative at Vatican after completion of peace treaties. ¶ Paul V. McNutt was designated first U.S. ambassador to new Philippine republic. ¶ Senate passed by voice vote legislation authorizing use of target fleet for atomic bomb experiment at Bikini atoll. ¶ Pres. Truman continued OWMR and appointed John R. Steelman as its director.

JULY, 1946

1. Tentative agreement on Yugoslavia's western frontier on basis of French compromise was reached by Big Four's foreign ministers in Paris. ¶ Charges that grave irregularities occurred in Polish national referendum were made by Stanislaw Mikolajczyk, Polish opposition leader.

2. U.N.R.R.A. halted shipment of tractors to White Russian and Ukrainian republics because soviet union allegedly was exporting tractors to Argentina. ¶ Premier Sutan Sjahrir of Indonesian republic asserted he was kidnapped by Javanese troops who mistook him for Dutch spy; on discovering error, they released him.

3. Hobbs bill aimed at curbing "racketeering" by labour unions was signed by Pres. Truman.

- 4. Philippine republic was born in ceremonies at Manila; sovereignty over islands was transferred by U.S. to Filipino people; recognition of independence of Philippine republic was proclaimed by Pres. Truman. ¶ Big Four's foreign ministers agreed to hold 21-nation peace conference on July 29. ¶ At least 39 Jews and 4 Poles were killed in Kielce, in worst anti-Jewish pogrom in Poland since country's liberation.
- 5. Canadian government pegged its currency unit at parity with U.S. dollar to ease "inflationary pressures."
- 6. Austrian government was ordered by soviet occupation authorities to surrender all former German property in eastern Austria. ¶ Chairman May of house military affairs committee denied there was anything "out of line" in his relations during war with lumber company as alleged by senate war investigating committee. ¶ Jawaharlal Nehru was formally inducted as president of India's Congress party.
- 7. Deportation from Austria of all Germans of non-Austrian descent was ordered by soviet occupation authorities. ¶ Arab Higher committee accused Pres. Truman of "irresponsible" statements, urging him to admit Jews to U.S. if his sympathy for plight of Jews in Europe was genuine. ¶ Mother Cabrini, who died in Chicago in 1917, was canonized by Pope Pius XII.
- 8. Establishment of world atomic control agency that would license and inspect atomic energy activities without subjection to veto was proposed by Herbert V. Evatt, Australian delegate to U.N. atomic energy subcommittee.
- 9. Three hundred U.N.R.R.A. employees in Shanghai cabled Director LaGuardia to complain of Chinese government's "persistent misuse" of U.N.R.R.A. materials. § Foreign Minister Molotov urged drastic revision of Sec'y of State Byrnes' proposal for a four-power guaranty of Germany's disarmament and asked for \$10,000,000,000 in reparations from the reich. § Dr. J. Leighton Stuart was named by Pres. Truman as U.S. ambassador to China; Robert Butler was named U.S. ambassador to Australia.
- 10. French claims for separation of the Ruhr were flatly rejected by Foreign Minister Molotov, who also opposed federalization of reich. ¶ U.N. health assembly voted 35 to 4 to give extraordinary powers to World Health organization.
- 11. Sec'y of State Byrnes and Foreign Sec'y Bevin declared U.S. and Britain would organize their zones in Germany as single economic unit, unless Big Four reached accord for economic merger of all four German zones.
- 12. Italian Premier de Gasperi formed cabinet composed of representatives of Christian Democratic, Communist, Socialist and Republican parties.
 - 13. House of representatives approved loan of \$3,750,-

772 ooo,ooo to British by 219 to 155 vote and sent it to Pres. Truman for signature.

15. Bill approving loan to Britain was signed by Pres. Truman. ¶ Gen. Draja Mikhailovitch was convicted of "treason" and "war crimes" by military tribunal and sentenced to hang in Belgrade. ¶ Majority report on Pearl Harbor inquiry commended diplomatic efforts of Pres. Roosevelt and Cordell Hull to avert war and placed blame for disaster on army and navy commands in Hawaii.

16. Pres. Truman ordered that only men between ages of 19 to 29 be called up in September draft. ¶ 43 German S.S. (Elite Guard) troops were convicted of slaying 900 U.S. prisoners and Belgian civilians during the 1944 Battle of the Bulge and were sentenced to die.

17. Gen. Draja Mikhailovitch and eight other Yugoslavs convicted of treason and collaboration with Germans were executed by firing squad. ¶ Nicolai Redin of soviet navy was cleared of espionage charges by federal court jury in Seattle. ¶ Mitsui family, one of Japan's most powerful financial and industrial oligarchies, voted its own dissolution.

18. Sen. Warren R. Austin of Vermont was named by Pres. Truman to represent U.S. at U.N. general assembly; others named by Truman to U.N. posts were Senators Connally and Vandenberg; Rep. Sol Bloom of N.Y. and Mrs. Eleanor Roosevelt. ¶ Rationing of bread in Britain was approved by 305 to 182 vote in house of commons.

19. Soviet delegate Gromyko told U.N. atomic energy commission's scientific and technical committee that U.S. S.R. agreed with U.S. intention not to reveal atomic secrets.

20. Pres. Roosevelt was found blameless for Pearl Harbor disaster by 8 to 2 vote of members of congressional Pearl Harbor investigating committee.

21. Revolt in Bolivia resulted in assassination of Pres. Gualberto Villarroel, whose body was hung from lamp post in La Paz public square.

22. Chairman May of house military affairs committee refused to appear before senate War Investigating committee probing his connection with several munitions firms that allegedly made excessive war profits; May said he was too busy. ¶ Nestor Guillen, head of Bolivia's supreme court, was installed as provisional president after ouster of old regime by student and worker revolutionaries. ¶ At least 120 persons were killed and others were missing in explosion that wrecked King David hotel in Jerusalem; Jewish terrorists were blamed for bomb blast.

23. Irgun Zvai Leumi, Jewish terrorist organization in Tel Aviv, acknowledged responsibility for bombing of King David hotel, but asserted "British tyrants" brought it upon themselves by ignoring phone warnings that hotel was to be bombed. § Bill authorizing U.S. to "stock-pile" strategic and critical materials was signed by Pres. Truman, who objected, however, to "Buy American" provisions of measure.

24. U.S. plan for establishment of semi-autonomous world atomic control agency was flatly rejected by Andrei Gromyko, soviet delegate to U.N. security council, who warned that attempt to undermine veto would be "dangerous and maybe fatal."

25. Revised OPA bill was "reluctantly" signed by Pres. Truman, who said it failed to assure maintenance of stable prices; proclamation re-establishing all rent controls as of June 30 was issued by OPA. ¶ Jesus T. Pinero was named governor of Puerto Rico by Pres. Truman. ¶ Explosion of underwater atomic bomb in second Bikini test sank ten

ships, including battleship "Arkansas" and carrier "Saratoga," and damaged six other craft.

26. OPA resumed functioning after 24-day lapse and issued scores of orders revising price ceilings on many commodities and items. ¶ Senate approved without opposition house-accepted measure to reorganize and streamline congress and sent bill to Pres. Truman for signature. ¶ Soviet union was accused by U.S. of stripping Hungary of vital food supplies and industrial materials in state department note delivered to Foreign Minister Molotov. ¶ U.S. Prosecutor Robert H. Jackson demanded conviction of 22 top nazis on trial at Nuernberg as war criminals, charging they were just as guilty as Hitler because they put "loaded gun in his eager hands."

27. Pres. Truman declared U.S. supported Sec'y Byrnes in his efforts to get "just peace for world," as secretary of state departed for Paris peace parley. ¶ Chinese Communist proposal for unconditional cessation of Chinese civil war was rejected by Nanking government. ¶ Threeman decontrol board to have final authority in determining what items and commodities were to stay under OPA price control was named by Pres. Truman; members were Roy L. Thompson (chairman), Daniel W. Bell and George H. Mead.

28. Proposal that France and Britain join in alliance to offset world dominated by U.S.S.R. and U.S. was made by Gen. de Gaulle.

29. H. V. Evatt, Australian delegate, announced at opening of 21-nation peace parley in Paris that he would fight any procedural rules that would limit voice of smaller nations.

30. Drafts of Allied peace treaties with Italy, Finland, Rumania, Bulgaria and Hungary were published at Paris peace conference. ¶ Disposal to overseas countries of \$3,612,177,000 worth of war materials for more than \$1,000,000,000 was announced by Thomas B. McCabe, foreign liquidation commissioner.

31. Delegates at Paris peace parley were told by Foreign Minister Molotov that U.S.S.R. opposed any outside interference in economic life of former German satellites. ¶ Pope Pius XII appealed to peace conferees in Paris to make a "just and durable" peace for Italy.

AUGUST, 1946

1. Big Four's proposal for solution of Trieste issue and Italo-Yugoslav frontiers was flatly rejected by Edward Kardelj, Yugoslav vice-premier.

2. Seventy-ninth congress adjourned after adopting Morse resolution under which U.S. would accept compulsory jurisdiction of court of international justice. ¶ U.S. veterans of World War II, equipped with arms, took over town of Athens, Tenn., after dispute over vote count. ¶ British Imperial troops from India were dispatched to Basra, in Iraq, presumably to protect British and Indian oil interests in southern Iran.

3. Drastic economy program was ordered by Pres. Truman, who directed his cabinet to reduce departmental expenditures by \$2,200,000,000.

4. Recep Peker was asked to form new Turkish government after resignation of Premier Shükrü Saracoglu and his cabinet.

5. Western powers were sharply criticized by soviet Foreign Minister Molotov, who charged U.S. and Britain sought simple majority vote at Paris peace parley because they controlled enough votes to ensure passage of their proposals.

6. China urged U.N. to postpone consideration of application of Mongolian People's Republic for membership.

- 9. Bill appropriating \$2,431,708,000 for G.I. terminal leave pay was signed by Pres. Truman. ¶ British foreign office spokesman said Britain was prepared to act without consulting U.N. if British oil interests in Iran were threatened.
- 10. Joint statement declaring settlement between Kuomintang and Chinese Communists in China appeared "impossible" was issued by Gen. Marshall and J. Leighton Stuart.
- 11. Nine white persons were held in custody on charges of "unlawful assembly" after race rioting in Athens, Ala. ¶ Numerous missiles believed to be rocket bombs streaked over Stockholm; areas from which they were launched were not known.
- 12. British government announced halt on all illegal immigration of Jews to Palestine and said would-be immigrants were to be interned in "Cyprus and elsewhere" until their fate was determined. ¶ Milan police stated body of Benito Mussolini, spirited away by Italian nationalists, had been found near Pavia monastery.
- 14. Chiang Kai-shek vowed to end one-party rule in China and set up constitutional government "without delay despite all obstacles."
- 15. Soviet attacks on U.S. foreign policy were denounced by Sec'y Byrnes.
- 19. Chinese Communist regime ordered all-out mobilization of estimated 130,000,000 people in area under its control. ¶ At least 3,000 persons were killed and many more were injured in four-day rioting between Hindus and Moslems in Calcutta.
- 20. British and U.S. notes sent to Poland complained Warsaw government was repressing democratic activities and charged serious irregularities in national referendum.
- 21. U.S. state department sent ultimatum to Yugoslav government, giving latter 48 hours to give satisfaction on shooting down of U.S. aircraft over Yugoslavia in which five U.S. fliers were killed, warning that failure to give prompt satisfaction would lead U.S. to place issue before U.N. security council. ¶ Yugoslav envoy to Greece was recalled in protest against attacks on Marshal Tito by Greek press. ¶ U.S. disapproval over soviet note to Turkey requesting that Turks share control of Dardanelles with U.S.S.R. was voiced in state department note that contended U.N. was proper authority to handle question.
- 22. Marshal Tito's promise to give satisfaction to U.S. over shooting down of U.S. planes was reported by Richard C. Patterson, U.S. ambassador to Belgrade. ¶ Greece was denounced as threat to peace by Dmitri Manuilsky, Ukrainian foreign minister, at Paris peace conference.
- 23. United Nations received Yugoslav request for return of 167 Danube river boats seized by Allied military authorities; Yugoslavs asserted seizure threatened country's economic life. ¶ Removal of Maxim Litvinov as deputy minister of foreign affairs was disclosed by Moscow radio. ¶ Britain announced it would not relinquish \$16,000,000 in Polish gold in its possession until Warsaw government fulfilled assurances that general elections would be "free."
- 24. U.S. state department said Yugoslavia seemingly had complied with ultimatum demanding satisfaction for shooting down aircraft, but reserved right to take case before U.N.; Marshal Tito charged U.S. airmen were engaged in reconnoitering Yugoslav zone of Venezia Giulia. Jawaharlal Nehru was named by Viscount Wavell to head India's new "caretaker government." Jarkey rejected U.S.S.R. request for participation in defense of Dardanelles, declaring that U.N. would be adequate guarantee of straits security. Japanese government was

ordered by Supreme Allied command to set aside 505 large plants in eight basic industries as potential war reparations.

- 26. Attorney general's office ruled that War Assets administration could transfer, legally and without cost, surplus real estate property to states.
- 27. War department disclosure that premature explosion of defective shells caused deaths of 38 U.S. soldiers was made at sessions of senate War Investigating committee.
- 28. Adm. Halsey, responding to criticism of dispatch of U.S. warships to Turkey and Greece, said it was "nobody's damn business where we go" and that "we will go anywhere we please."
- 29. Sweden, Afghanistan and Iceland were unanimously approved by security council to become members of U.N., but applications of Albania, Eire, Mongolian People's Republic and Portugal were rejected. ¶ U.N. security council was asked by soviet union to order every country with troops in non-axis states to report on number of troops and location within two weeks.
- 30. U.S. and Britain were accused by Foreign Minister Molotov of interfering in Greek elections to ensure return of monarchy. ¶ Bendix trophy air race was won by Paul Mantz, whose average speed over 2,648-mi. course from California to Cleveland was 435.6 m.p.h.
- 31. Twenty of 21 nazi defendants on trial at Nuernberg for war crimes protested their innocence in final pleas; Hans Frank publicly confessed blame for atrocities laid to him.

SEPTEMBER, 1946

- 1. Majority of Greeks voted for return of King George II in plebiscite. ¶ Tito apologized to U.S. for death of five U.S. airmen shot down over Yugoslavia.
- 3. Selling wave on New York stock exchange resulted in losses averaging from 2 to 17 points in sharpest slump in 15 years.
- 4. Companies headed by Henry M. Garsson were absolved in war department report of charge of having manufactured defective shells that caused casualties among U.S. troops during World War II. ¶ Four-day rioting between Hindus and Moslems in Bombay area resulted in 146 deaths and 557 wounded. ¶ Revised reports on two Bikini atomic bombings disclosed that only 9 of 92 ships in target area escaped sinking, damage or contamination by radioactivity.
- 5. Ukrainian charges that Britain and Greek government were responsible for terrorism in Greece, were called "unbridled propaganda" by Sir Alexander Cadogan, British representative on U.N. security council.
- 6. Early establishment of provisional centralized German government was urged by Sec'y of State Byrnes in Stuttgart speech.
- 7. Third atomic bomb test was postponed indefinitely by Pres. Truman.
- 8. Bulgarian electorate voted in favour of republic in national referendum.
- 11. Visits of U.S. warships to Greek port and continued stay of British troops in country were termed "insult to Greek people" by Andrei Gromyko, soviet delegate to U.N. security council.
- 12. Sec'y of Commerce Henry A. Wallace warned in speech at New York that "get-tough" policy with Russia would not prevent war and declared that British policy in near east combined with soviet retaliation would lead U.S. into war unless nation had clearly defined foreign

policy; in Washington, Pres. Truman said he had read and approved Wallace's speech. § U.S. would not halt U.N.R.R.A. shipments to Yugoslavia in retaliation for shooting down of U.S. aircraft, William L. Clayton, acting secretary of state, declared.

14. Pres. Truman announced full support of Sec'y Byrnes and said there had been "no change in established foreign policy" of U.S.; president said that in approving Wallace's earlier speech, he had merely approved Wallace's right to deliver it.

15. Very Rev. John Baptist Janssens, Belgian Jesuit, was unanimously elected superior general of Society of

Jesus in Rome ceremony.

16. Soviet Foreign Minister Molotov rejected Sec'y Byrnes' contention that final German-Polish frontier remained to be fixed, declaring borders were definitely established at Potsdam. ¶ Sec'y Wallace said he stood by his New York speech and that he would continue, in or out of cabinet, to fight for "just and lasting peace."

17. Trucking strike ended in New York city when majority of operators agreed to wage increases and shorter work week. ¶ Sec'y Wallace released private letter he had written to Pres. Truman July 23 urging president to seek an accord with soviet union as means of heading off atomic arms race.

18. Archbishop Aloysius Stepinatz, Catholic primate of Yugoslavia, was formally arrested by Yugoslav government and held for trial on charges of "crimes against the people." ¶ Development of powerful poison of which a single ounce would kill every person in U.S. and Canada was announced by U.S. chemical warfare service.

19. Winston Churchill proposed establishment of French-German partnership as first step toward creating United States of Europe.

20. Pres. Truman removed Henry A. Wallace as secretary of commerce; Wallace said "winning the peace is more important than high public office." ¶ U.S. state department disclosed all army and navy personnel would be removed from Iceland within 180 days, but that U.S. civilian personnel would be retained at Keflavik aerodrome to maintain communication with U.S. armed forces in Germany. ¶ Charges that Greek government policy in Balkans threatened world peace and security were dropped by U.N. security council. ¶ National Maritime union (C.I.O.) called off east coast shipping strike.

21. Strike of west coast maritime unions ended after 17-day walkout.

22. W. Averell Harriman was named secretary of commerce, replacing Henry A. Wallace.

23. U.S. abandoned its claim to full compensation for damages from Rumania at Paris peace parley.

24. Soviet request that U.N. members report exact number and location of their armed forces in all but former axis states was rejected by seven to two vote in security council. ¶ Premier Stalin said he did not believe in real danger of "new war" and said power of atomic bombs would not determine outcome of future war. ¶ U.S. government was asked by Yugoslav government to close its information service in Belgrade on grounds it was distributing propaganda inciting Yugoslavs to "open treason."

26. Pres. Truman said he would not ask for permanent decontrol or temporary moratorium on meat price ceil-

ings.

27. U.S. refusal to return Danubian river craft, to Czechoslovakia and Yugoslavia was branded as direct intervention in affairs of Danubian states by soviet dele-

gate at U.N.E.S.C.O. meeting. ¶ Foreign Sec'y Ernest Bevin declared his agreement with Premier Stalin that there was no real danger of war, but appealed for cessation of diplomatic war of nerves.

28. King George II returned to Athens to resume role as monarch of Greece. ¶ Turkey was warned by U.S.S.R. that if it agreed on military measures in Dardanelles area with any power not on Black Sea, soviet union would regard such action as threatening security of other Black Sea nations. ¶ Premier Ismail Sidky Pasha resigned, presumably over failure to reach agreement in Anglo-Egyptian talks.

29. Gen. de Gaulle denounced French constitution draft as "compromise unworthy of Republic."

30. Sec'y of Navy Forrestal said U.S. naval forces in Mediterranean and Eastern Atlantic were there to support U.S. foreign policy.

OCTOBER, 1946

1. Twelve of nazi defendants convicted of war crimes were sentenced to death on gallows by International Military Tribunal at Nuernberg; three received life imprisonment, four were given lighter sentences and three—Franz von Papen, Hjalmar Schacht and Hans Fritzsche—were acquitted. ¶ U.S. navy plane "Truculent Turtle" set record for nonstop long-distance flight, completing 11,236-mi. trip from Perth, Australia, to Columbus, O., in 55 hrs., 15 min. ¶ Iranian government asked Britain to recall its embassy secretary from Tehran, on charges that he was involved in revolt of south Iranian tribesmen.

3. Henry Wallace was strongly criticized by Bernard M. Baruch, U.S. delegate on U.N. atomic energy commission, for refusal to correct "errors" in his July 23 letter on atomic energy to Pres. Truman. ¶ Gen. Omar N. Bradley criticized John Stelle, American Legion commander, at Legion convention in San Francisco, declaring Stelle had "impaired our progress by deliberately misrepresenting our objectives." ¶ Director John R. Steelman of OWMR warned in quarterly report that further price rises might lead to price collapse. ¶ Sec'y of State Byrnes voiced hope that Premier Stalin's statement that there was no danger of immediate war would end "unwarranted charges" that U.S. was using atomic weapon as threat against soviet union.

4. Pres. Truman reiterated request to Prime Minister Attlee of Britain to open Palestine "at once" to permit "substantial" immigration of displaced Jews. ¶ British Labour government announced formation of new ministry of defense, intended to co-ordinate army, navy and air services, with Albert V. Alexander as its head. ¶ Twenty-three of 25 Negroes accused of participating in race disorders at Columbia, Tenn., were acquitted by all-white jury in trial at Lawrenceburg, Tenn.

5. Winston Churchill warned that destiny of India might lie in soviet, not British, hands. ¶ Agreement with U.S. permitting Americans to use Keflavik airdrome was ratified by 32 to 19 vote in Iceland parliament.

6. U.S. Superfortress, "Pacusan Dreamboat" completed 9,500-mi. flight from Hawaii to Cairo in 39 hr., 36 min.

9. Indemnity of \$150,000 for lives of five U.S. pilots killed when their plane was shot down over Yugoslavia was paid to U.S. by Yugoslav government, state department disclosed. ¶ State department reiterated its support of Turkey in Dardanelles controversy in note delivered to soviet foreign office.

10. Draft of Rumanian treaty, which included provisions for free navigation on Danube and equal trade opportunities in Danubian nations, was approved at Paris

peace parley. ¶ Pres. Truman flatly declared that Great Britain did not have any atomic bombs, in denial of reports that Britain was stockpiling atomic weapons. ¶ Kuomintang's standing committee extended Chiang Kaishek's tenure as president for another three years.

11. Capture of Communist base of Kalgan in north China by Chinese Nationalist armies was announced by Chinese government source. ¶ Draft of Bulgarian peace treaty was approved by conferees at Paris peace parley. ¶ Yugoslav court in Zagreb sentenced Archbishop Stepinatz to 16 years in prison on charges of having actively collaborated with axis powers during war.

12. Announcement that U.S. would pay Italy \$50,000,000 for lire furnished to U.S. army for purchasing supplies in

Italy was made by Sec'y of State Byrnes.

13. Draft of new constitution was approved by French electorate by majority of about 1,000,000 votes. ¶ Draft of Hungarian peace treaty was approved by conferees at Paris peace parley.

- 14. Adoption of draft of Finnish peace treaty terminated work of Paris peace parley; Vyacheslav Molotov, soviet foreign minister, termed as "unsatisfactory" some of results of conference. ¶ Vatican dissatisfaction with sentence passed on Archbishop Stepinatz was reflected in its decision to excommunicate all persons who contributed morally or physically to "crimes" that resulted in his arrest and sentencing. ¶ All price controls on livestock and meat were removed, effective Oct. 15, by Pres. Truman, who blamed meat shortage on "reckless group of selfish men."
- 15. Paris peace conference closed after 11 weeks and 2 days of sessions in Luxembourg palace. ¶ St. Louis Cardinals defeated Boston Red Sox 4-3, in seventh and deciding game of baseball's annual world series.
- 16. Ten leading nazis were hanged in prison gymnasium at Nuernberg; Hermann Goering committed suicide by swallowing poison less than two hours before he was slated to hang. ¶ U.S. state department stopped remaining \$40,000,000 of \$50,000,000 credit granted Czechoslovakia for purchasing surplus army equipment and asked Export-Import bank to stop negotiations for another \$50,000,000 credit, charging Czechoslovakia had resold some material to Rumania at profit. ¶ Chiang Kai-shek issued eight-point peace bid to Chinese Communists, declaring he would promptly give cease-fire order if Communists accepted his procedure for resuming peace parleys.
- 17. OPA removed all price controls from coffee. ¶ King Ibn Sa'ud of Saudi Arabia wrote Pres. Truman that U.S. request to open Palestine immediately to Jewish immigration violated "previous promises" made to Arabs.
- 18. Sec'y of State Byrnes, in broadcast on results of Paris peace parley expressed concern over "continued, if not increasing" U.S.-Russian tension but decried idea that conflict was inevitable. ¶ State department charged that Yugoslav government held individuals in forced labour and urged prompt "remedial" measures.

20. Moscow radio attacked U.S. congress as tool of "reactionary" interests and expressed hope that voters at Nov. 5 elections would elect "progressive" candidates.

21. 1,400 pilots and co-pilots of Transcontinental and Western Air, Inc., staged first strike in air line history. ¶ John L. Lewis accused government of violating contract with soft coal miners and demanded reopening of contract for new negotiations on wages. ¶ Social Democratic party emerged as strongest political party in Berlin's municipal elections, receiving about 49% of votes cast; Christian Democratic Union was second and Socialist Unity party, sponsored by Russians, was third. ¶ Soviet

delegate to U.N. atomic energy commission proposed world-wide report on uranium deposits as basic step toward control of atomic energy. ¶ U.S. request that Big Three take measures to guarantee free elections in Bulgaria was rejected by soviet union, state department disclosed.

22. Argentine action in halting nearly all food exports to Bolivia was linked with Perón government's displeasure with ouster of Villarroel dictatorship and establishment of democratic regime by Bolivia.

- 23. Pres. Truman, opening first session of U.N. general assembly in New York, said elimination of fear of war was world's principal need, warning that world disaster would follow if U.N. should be split into "irreconcilable parts" by conflicting ideologies. ¶ All foods and beverages, except sugar, rice, molasses and syrups, were removed from price controls by OPA.
- ' 24. U.N. general assembly was told by Secretary General Trygve Lie that Franco regime in Spain would be constant source of mistrust among U.N. members so long as it remained in power. ¶ Gabriel Gonzales Videla was confirmed by senate as president of Chile for six-year period.

27. Government-sponsored Fatherland Front bloc won overwhelming majority in Bulgarian national elections; party gained 364 seats to 101 for opposition.

- 28. Premier Stalin, in interview with U.S. correspondent, said soviet union did not have secret of atomic bomb. § U.S. and Britain were accused by Kuzma Kisselev, White Russian delegate to U.N., of violating U.N. charter by maintaining armies in non-axis countries. § Rumania was accused by U.S. state department of using methods that would prevent free and fair elections scheduled for Nov. 19. § Pres. Truman named five civilians to head U.S. atomic energy commission, with David E. Lilienthal as chairman of new body.
- 29. U.S. plan for world control of atomic energy was rejected by soviet Foreign Minister Molotov, who urged U.N. to take prompt action to reduce armaments and ban atomic missiles.
- 30. Soviet proposal for world-wide reduction of armaments was endorsed by Warren R. Austin, U.S. delegate on U.N. general assembly, who added, however, it would require effective enforcement provisions. ¶ Chancellor Leopold Figl was instructed by Austrian parliament to press for full restoration of Austrian sovereignty and termination of Allied occupation.
- 31. President-elect Gabriel Gonzales Videla of Chile appointed three Communists to his cabinet.

NOVEMBER, 1946

- 1. Belgium, Netherlands and Luxembourg requested Big Four powers to sit in on discussions of German peace treaty.
- 2. Pres. Truman declared in speech at Kansas City that "atomic bomb has made war so terrible that we simply cannot have another one."
- 3. New Japanese constitution was formally promulgated by Emperor Hirohito. ¶ Zionist settlers and Arab villagers clashed over land claim in northeast Palestine; two Jews and two Arabs killed. ¶ Gabriel Gonzalez Videla was inaugurated as president of Chile for six-year term.
- 5. Republicans gained control of U.S. congress in national elections, gaining 12 seats in senate (total of 51 to 45 for Democrats) and 57 seats in house of representatives (249 to 185). ¶ Molotov accused Sec'y of State Byrnes of threatening to withhold reparations from Yugo-

slavia if latter nation refused to sign Italian peace treaty.

6. President Truman disclosed U.S. proposal under which strategic Pacific islands would be placed under U.N. trusteeship provided U.S. remained sole administering authority. § Rep. J. W. Fulbright (Dem.) of Arkansas proposed that Pres. Truman appoint Republican secretary of state and resign.

7. John Foster Dulles notified U.N. that if it failed to accept U.S. trusteeship proposals for control of Pacific islands, U.S. would continue de facto control of strategic

areas.

- 8. U.S. mission to Albania was withdrawn after charges that Premier Enver Hoxha's regime was unwilling to recognize validity of existing treaties.
- 9. End of all controls on prices, wages and salaries, save for curbs on rent and sugar, announced by Pres. Truman.
- 10. French Communists won largest number of seats in elections for the first national assembly under new constitution; Popular Republican Movement was second and Socialist party third.
- 11. Pres. Truman admitted that G.O.P. control of legislative branch of government and Democratic control of executive would result in inevitable division but said friction could be avoided if nation's interest was put ahead of party politics. ¶ Attitude of compromise in council of foreign ministers was reflected in Sec'y Byrnes' announcement that U.S. had agreed to return of Danubian ships and barges to owner states, and in Foreign Minister Molotov's disclosure that U.S.S.R. had restored identifiable property within soviet zones to foreign owners.
- 12. Large U.S. expedition to Antarctica involving 4,000 men and dozen vessels, commanded by Adm. Byrd, announced in Washington. ¶ Establishment of "task fleets" in both Atlantic and Pacific was announced by U.S. navy department.
- 13. Field Marshal Jan C. Smuts warned that if U.N. failed to approve Union of South Africa's proposal to annex South West Africa mandate, South Africa would continue to administer mandate anyway. ¶ Andrei Gromyko, in U.N. address, denounced use of food as political weapon.
- 14. Albanian Premier Hoxha charged U.S. used issue of treaty validity to obstruct resumption of U.S.-Albanian relations. ¶ Nobel Peace prize for 1946 was won by Dr. John R. Mott and Prof. Emily Greene Balch of U.S.; chemistry award went to Professors James Batcheller Sumner, Wendell M. Stanley and John Howard Northrop of U.S.; physics award to Prof. Percy Williams Bridgman of U.S.; the literature prize was awarded Herman Hesse, Swiss novelist.
- 15. John L. Lewis formally notified government that union's coal pact with federal government would be terminated Nov. 20. ¶ Plan for recognition of de facto authority of Indonesian republic over islands of Java, Sumatra and Madura and establishment within two years of United States of Indonesia under co-equal Netherlands-Indonesian union was initialled in Batavia by Netherlands and Indonesian delegations.
- 16. Recommendations for stripping Japanese industry of its war-making potentialities were contained in Edwin Pauley's report to Pres. Truman.
- 18. U.S. government obtained restraining order to prevent John L. Lewis and United Mine Workers from starting strike in alleged violation of government contract. § Foreign Secretary Bevin's foreign policy was endorsed

by 353 to 0 vote in house of commons, with estimated 100 Labourites abstaining from voting. ¶ Marshal Ivan S. Konev was appointed commander in chief of all soviet ground forces to succeed Marshal Georgi K. Zhukov.

19. Radio broadcasting by foreign correspondents was

formally abolished by soviet government.

20. John L. Lewis and U.M.W.A. defied federal injunction restraining them from cancelling government contract as coal miners began scheduled strike.

- 21. Federal court in Washington, D.C., ordered John L. Lewis and U.M.W.A. to show cause why they should not be held in contempt for ignoring government injunction against coal strike. ¶ Britain's willingness to accept soviet proposal for census of all armed forces outside its own border provided it was linked to general disarmament plan, was announced before U.N. by Foreign Sec'y Bevin.
- 2°. Pres. Bierut of Poland said Catholic Church would continue to enjoy its rights in Poland if clergy would work with new government.
- 24. French Communist party again won largest number of votes in national balloting for selection of electoral college for Council of the Republic. ¶ Twelve U.S. army personnel and civilians, stranded by plane crash on Gauli glacier in Switzerland, were rescued by two Swiss pilots in ski-equipped planes.
- 25. Interagency commission designed to weed out "disloyal" and "subversive" personnel among federal employees was announced by Pres. Truman.
- 26. Molotov submitted request to U.N. that information on manufacture of atomic weapons be included in any future disarmament conference.
- 27. Council of Foreign Ministers reached agreement on status of Trieste. ¶ Resolution that would require all 54 U.N. member states to submit reports on total of armed forces, both at home and abroad, by Jan. 1, 1947, adopted by U.N. political and security committee; soviet proposal to include information on armaments, including atomic bombs and rocket weapons, was defeated; the principle of world inspection and control as means of checking compliance with proposed plan for general disarmament was accepted by Foreign Minister Molotov next day.
- 28. U.N. general assembly subcommittee upheld by ten to five vote right of administering states to establish military bases in territory held under trusteeships with approval of security council. ¶ Sec'y of State Byrnes denied charge of Dmitri Manuilsky, Ukrainian foreign minister, that shooting of Gregory Stadnik, Ukrainian delegate to U.N., in New York food shop, was premeditated plot or had any political implications.
- 29. Andrei Vishinsky told U.N. political and sccurity committee that U.S.S.R. did not intend to renounce principle of "unanimity" of great powers. ¶ Rapid soviet troop demobilization in eastern Germany disclosed by generally reliable sources in Berlin. ¶ Paul Porter resigned as OPA director.
- 30. Col. Gcn. Eberhard von Mackensen and Lt. Gen. Kurt Maelzer were found guilty and sentenced to death by British military court in Rome for having caused death, in March 1944, of 336 Italian civilian hostages in Ardeatine caves.

DECEMBER, 1946

- 1. Miguel Alemán was inaugurated president of Mexico. ¶ Report of senate War Investigating committee on conditions in U.S. zone of Germany charged U.S. forces with widespread misconduct.
- 2. Anglo-U.S. pact for economic merger of respective zones in reich was signed by Sec'y of State Byrnes and

Foreign Minister Bevin. ¶ Sen. Tom Connally warned U.N. that U.S. would not "tolerate any veto" that would block effective functioning of system for world inspection and control of armaments. ¶ Lea act was ruled unconstitutional by federal judge in Chicago, who dismissed criminal charges under its provisions against James C. Petrillo of American Federation of Musicians.

- 3. Workers in all nations would take action to help Spanish people overthrow Franco if U.N. failed to take positive measures, declared Leon Jouhaux, French trade union leader, in speech before U.N. political and security committee. ¶ President Truman rejected proposed probe of U.S. military government in Germany as unnecessary. ¶ Oliver Max Gardner, undersecretary of treasury, was named U.S. ambassador to Great Britain.
- 4. John L. Lewis was fined \$10,000 and United Mine Workers of America \$3,500,000 for contempt of court by Judge Goldsborough of federal court in District of Columbia; criminal contempt proceedings against Lewis were dropped at government's request. ¶ Wilson W. Wyatt resigned as National Housing administrator. ¶ Foreign Minister Molotov clarified veto issue on arms inspection proposal, declaring U.S.S.R. did not intend that security council should have veto over actual control activities.
- 5. Bernard Baruch urged soviet union to join other U.N. members in accepting new U.S. plan for international atomic control, pleading that "to delay may be to die." § John D. Small resigned as director of Civilian Production administration.
- 6. Indian conference in London ended in failure over Pakistan issue; British Labour government indicated it would not accept any constitution for India not drafted with help of Moslems. § Interstate Commerce commission approved average increases of 17.6% in rail and water carrier freight rates and charges. § Hussein Ala, Iranian ambassador to U.S., informed U.N. security council that Iran had decided to send troops into Azerbaijan province despite "friendly" soviet advice. § Dr. Julian Huxley was elected director-general of U.N.E.S.C.O. for two years.
- 7. John L. Lewis called off coal strike, ordering miners to continue working until April 1, 1947. ¶ Dr. Le Van Hoach was sworn in as new president of provisional government of Republic of Cochin-China.
- 8. Over-riding British and U.S. objections, U.N. general assembly adopted by 32 to 15 vote resolution supporting India's charges that South Africa practised racial discrimination against Indian nationals living there. § Ismail Sidky Pasha resigned as premier of Egypt.
- 9. U.S. supreme court granted justice department's petition to decide appeal in case of John L. Lewis and U.M.W.A. ¶ Resolution denouncing Franco Spain and urging members of U.N. to recall their envoys from Madrid, was passed by 23 to 4 vote in general assembly's political and security committee. ¶ Council of Foreign Ministers agreed to hold following session in Moscow beginning March 10, 1947, to draft peace settlements for Germany and Austria. ¶ Mahmoud Fahmy Nokrashy Pasha, leader of Saadist party, was named by King Farouk to form new Egyptian cabinet.
- 10. Establishment of inspection body exempt from veto to check both armaments and armed forces was proposed by Britain in U.N. general assembly.
- 12. General assembly of U.N. approved, 34 to 6, resolution requesting member states to withdraw diplomatic missions from Spain. ¶ Yugoslavia, Albania and Bulgaria were accused by Greek Premier Tsaldaris of supporting organized border raids against his country. ¶ Léon Blum

was named premier of France, receiving 575 out of 590 votes in national assembly.

- 13. Resolution urging great powers to employ strong means to prevent use of veto from blocking security council's effort to reach prompt decision was passed by 36 to 6 vote in U.N. general assembly. ¶ Secretary of State Byrnes disclosed that U.S. had 550,000 troops abroad, mostly in Germany, Japan, Korea, Austria and Venezia Giulia. ¶ Agreements under which U.N. would accept trustee administration of eight territories formerly under League mandates were voted by U.N. general assembly; trusteeship council was completed Dec. 14. ¶ Manchurian industries suffered "appalling" damage during soviet occupation, Edwin W. Pauley, U.S. reparations representative, charged in report to Pres. Truman.
- 14. Pres. Truman removed numerous restrictions on housing and relaxed other building curbs. ¶ U.N. general assembly voted 46 to 7 to accept John D. Rockefeller, Jr.'s offer of site in New York city as permanent headquarters. ¶ World disarmament resolution was voted by U.N. general assembly, but soviet request for troop census was deleted from bill; assembly rejected South African request to annex South West Africa mandate.
- 15. Siam became 55th member of U.N., receiving unanimous vote in U.N. general assembly.
- 16. Cabinet composed solely of Socialists was formed by French Premier Léon Blum.
- 17. Harold Stassen formally announced his candidacy for G.O.P. presidential nomination; Sen. Vandenberg declared he was not a candidate.
- 19. Attlee government announced new measure which would give government broad authority over agriculture and would guarantee in return stable prices, fair wages and adequate living conditions.
- 20. Alterations in size and arms of U.S. army divisions to meet changes of atomic age were announced by Gen. Jacob L. Devers, commander of U.S. army ground forces. ¶ Severe fighting broke out between French forces and troops of Viet Nam republic at outskirts of Hanoi. ¶ Prime Minister Attlee told house of commons that Britain would offer Burma independence on same terms as India; Churchill attacked proposal, declaring it signified another step in "decline and fall of British empire."
- 21. Announcement that Sir Victor Mallet, British ambassador, had been instructed to leave Madrid "at earliest possible moment" was made by British foreign office.
- 22. Foreign Sec'y Bevin denied Britain was tied to U.S. foreign policy or was antipathetic to soviet union. ¶ Viet Nam forces extended military operations throughout northern Indo-China.
- 23. Premier Léon Blum disclosed French government would send Gen. Leclerc to Indo-China on military inspection mission; he also reaffirmed France's recognition of Viet Nam's independence. ¶ French action in setting up customs barrier between Saar and rest of Germany was denounced by Gen. Clay.
- 24. Informal advisory board on labour problems was announced in Washington; group included Secretaries Schwellenbach, Clark and Harriman; John R. Steelman, reconversion director; Paul M. Herzog, NLRB chairman and Clark Clifford, special counsel to president. ¶ More than 800,000 Germans subject to denazification trials were amnestied by Gen. Joseph T. McNarney.
- 25. Permanent constitution was voted by Chinese National assembly in Nanking; Chinese Communists, boycotting assembly, said they would not recognize charter.

27. George E. Allen resigned as director of Reconstruction Finance corporation, effective Jan. 16, 1947.

28. Gen. de Gaulle announced he would not be candidate for presidency of new French republic because of dissatisfaction with new constitution.

29. Liberal groups from 21 states voted to merge into new political action body called "Progressive Citizens of America." ¶ Jewish terrorists in Palestine flogged four British soldiers in retaliation for judicial lashing of captured terrorist by British.

30. Plan for world control of atomic energy conforming with original Baruch proposals was adopted by 10 to 0 vote in U.N. atomic energy commission; soviet union and Poland abstained from voting.

31. National state of hostilities in World War II ended by President Truman, who emphasized that state of war and state of emergency proclaimed by Pres. Roosevelt in 1939 and 1941 were still in force; proclamation terminated 18 wartime statutes.

Chungking

Situated on the banks of the Yangtze Kiang river above the Ichang gorges, Chungking, China, though it is the most important settlement in far-off Szechwan province, never amounted to much, internationally speaking, until a geological accident brought it into political prominence in 1938. Up to this time Chungking had existed mainly on river traffic. U.S. and British importers and exporters, oilmen and shippers maintained offices and trading posts in Chungking because of its position as the last stop of importance on the river, and gunboats of both nations plied between Chungking and Shanghai regularly in high-water season. During the Chinese-Japanese war, however, the fact that Chungking was built on hard rock became very important to the Chinese. The national government, fleeing its temporary refuge at Hankow just ahead of the Japanese invaders, selected the Szechwan city as the new site for its capital, and settled in about Oct. 1938. Chungking's foundations are solid and the underlying rock is full of caves which could serve as air-raid shelters by being extended; new caves also were dug. Moreover, the town's peculiar location on a wedge-shaped slice of land among the Szechwan mountains just at the confluence of the Yangtze Kiang and Chianling rivers, made it difficult for Japanese bomber pilots to approach unobserved. After the government moved in, Chungking swelled to enormous proportions. Accurate statistics were unobtainable, but the population certainly reached figures of several millions. It became one of the world's leading capitals, sustaining terrific bombings until the end of 1941, and remained the capital city of China until the end of the war in 1945, when a general exodus of the victorious government was begun back to Nanking. Presumably Chungking would resume her former status as a lazy river port on the Yangtze Kiang, but scarcely an original building remained after the terrific Japanese bombings of the war years. The plaster-strewn ruins of the old city, interspersed with stubborn, never-ceasing activity, as the Chinese persisted in building their homes anew after each raid, stood as a symbol of the long siege. The total population as indicated in the registration for residents' identification cards was around 1,000,000 at the end of 1942.

Churchill, Winston Leonard Spencer

Churchill (1874—), British statesman, was born Nov. 30, 1874, at Blenheim palace, Oxfordshire, England. His father was Lord Randolph Churchill; his mother, Jennie Churchill, was the daughter of Leonard Jerome of New York city. Educated at Harrow and Sandhurst, he joined the army and served in two British campaigns in Africa in 1895 and 1897. While covering the Boer War (1899–1902), as a correspondent for the London Morning Post, he was taken prisoner by the Boers but later escaped.

Churchill was first elected to parliament in 1900 as Conservative member for Oldham. When the Conservatives abandoned the principle of free trade, Churchill left the party and joined the Liberals in 1904. Two years later (1906), he was returned to parliament as Liberal M.P. He was undersecretary for the colonies in the Campbell-Bannerman government, 1905-08. In 1911, after the Agadir incident led to increasing Anglo-German tension, Churchill was appointed first lord of the admiralty. He was credited with many reforms and with having fully prepared the royal navy for the outbreak of war in 1914. Despite opposition of high naval officers, Churchill carried out his cherished project, the Dardanelles campaign, in 1915. The resignation of Lord Fisher, who had disapproved of the venture, was one of the contributing factors to the downfall of the Liberal government, and Churchill lost his post at the admiralty.

Subsequently Churchill defended the Dardanelles campaign as a legitimate war gamble and blamed Lord Fisher for not voicing his disapproval in the war council. Following his departure from the cabinet, he went to France, where he commanded the 6th Royal Scots Fusiliers.

Lloyd George, returning to power in 1917, recalled Churchill to the government, first as minister of munitions and then as secretary for war and air minister (1918–21). However, Lloyd George disapproved of the costly British intervention in Russia, undertaken at Churchill's inspiration, and shifted his colleague to the colonial office in 1921. The following year (1922), Churchill was defeated for parliament by his Dundee constituents.

After two years of retirement, during which he took to painting and writing, and completed the first of his four-volume work World Crisis, 1916–18, he rejoined the Conservative party and was elected to parliament in 1924 from the Epping division. In the second Baldwin administration, he was chancellor of the exchequer (1924–29) and was rector of Edinburgh university, 1929–32. In the following period from 1933 to 1938, his monumental four-volume work, Marlborough, was published.

During the historic decade 1937-46, Churchill emerged as a statesman of world stature. He was quick to recognize that Hitler's naziism could not be localized as a purely German domestic problem; that it extended beyond reich borders and threatened the peace of all Europe. This aspect of the German problem was not seen by the leaders of the MacDonald, Baldwin or Chamberlain governments in the 1930s. In the years 1936 to 1938, he warned against German rearmament. He pleaded (May 25, 1938) with Britain to build up the royal air force, urged implementation of Britain's national security and strengthening of its air defenses. In the commons debate on the government's request for approval of the Munich agreement, Churchill denounced the pact and assailed France and Britain for having failed to maintain closer contact with the soviet

union. He assailed the Chamberlain government (June 28, 1939) as a regime that tried to "buy off nazidom."

Although there was no love lost between the two men, Chamberlain at the outbreak of war, Sept. 3, 1939, put Churchill in the cabinet, in his old office of first lord of the admiralty. On May 10, 1940, when the fateful German push into the Low Countries and France had begun, Churchill superseded Chamberlain as prime minister. Three days later (May 13), he made his celebrated speech to commons in which he told his countrymen that he had nothing to offer them but "blood, toil, tears and sweat." The rapid succession of Allied military disasters that followed brought out Churchill's qualities of leadership. His dynamic speeches and strong conviction of ultimate victory helped to bolster morale at one of the most critical moments in the empire's history. After the evacuation of Dunkirk, he promised (June 4, 1940) that Britain would fight on alone "whatever the cost may be," and expressed confidence that "in God's good time, the New World, with all its power and might," would step forth "to the rescue and the liberation of the old." As the war progressed, with new disasters befalling the Allies on nearly all battle fronts, Churchill in his public addresses and reports to parliament on the war situation frankly acknowledged the gravity of Britain's danger, but invariably pointed up the nation's will to resist.

Although British military reverses in 1941 brought forth an increasing stream of criticism from the opposition, Churchill's personal popularity remained great. This was reflected in the 447 to 3 vote of confidence that he received from commons on May 7, 1941, despite the severe defeats suffered by British arms in Libya and Greece. His conduct of relations with the U.S. was marked by both tact and candour; he openly confessed in his speech, Dec. 26, 1941, before the joint session of congress in Washington, that "if the United States has been found at a disadvantage at various points in the Pacific ocean, we know well that that is to no small extent because of the aid which you have been giving to us in munitions for the defense of the British Isles and for the Libyan campaign, and above all, because of your help in the Battle of the Atlantic." At the same time, he did not hesitate to insert the "due respect for their existing obligations" clause-point four-in the Atlantic Charter which he and President Roosevelt drafted in Aug. 1941.

To critics who subsequently charged that preservation of the British empire was not a legitimate war aim, Churchill retorted Nov. 10, 1942, that he did not intend to "preside over the liquidation of the British empire."

Equally frank were the expressions of his feelings toward the U.S.S.R. and Japan. When Germany invaded the soviet union, June 22, 1941, Churchill declared: "Any man or state who fights nazism will have our aid." At the same time he refused to modify his frequently expressed opposition to communism in the political sphere. Regarding Japanese plans for a "new order" in eastern Asia, he twice warned the Tokyo government in 1941 that Great Britain would declare war immediately in the event of a Japanese attack on the U.S. This promise was fulfilled Dec. 8, 1941, the day after Pearl Harbor.

Military reverses in Burma, Malaya and Hong Kong rocked his government in the first months of 1942. Churchill, demonstrating his customary skill in oratory and parliamentary adroitness, silenced his critics with a 464 to 1 vote of confidence on Jan. 29, 1942. Subsequently, in a speech delivered to a secret session of the house of commons, Apr. 23, 1942, he declared that from the start of the war, he had always hoped for entry of the United States.

"Dropping the Pilot," cartoon by Bishop of the St. Louis Star-Times on the resignation of Winston Churchill, British prime minister during World War II, after the Conservative party was defeated in the general election of July 1945

After the fall of Singapore, he dropped (Feb. 22, 1942) those ministers from his cabinet branded as "incompetents" by the opposition. On June 27, during his second trip to Washington, Churchill and Roosevelt jointly declared that the Allies would open military operations to divert nazi strength from the Russian front. He conferred with Premier Stalin on these proposals in Moscow in Aug. 1942.

The year 1943 was one of great personal triumph for Churchill. His arch-foe Hitler had been driven out of Africa. Mussolini vanished as a political figure of importance. Allied armies scored victories in both Europe and Asia. The planning and preparations that led to these and subsequent successes were laid down, for the most part, in the six major conferences Churchill attended in that year. They were the Casablanca conference (Jan. 15–24) with Roosevelt; the Washington conference, which started May 11, with Roosevelt; the Quebec parleys in August with Roosevelt; the Cairo conference, Nov. 22–26, with Chiang Kai-shek and Roosevelt; the Tehran conference, Nov. 28–Dec. 1, with Stalin and Roosevelt, and the second Cairo parley, Dec. 4–6, with Roosevelt and President Ismet Inönü of Turkey.

For the first time since he had taken office, Churchill faced serious opposition in 1944. Both Labourites at home and "liberal" elements abroad disapproved of Churchill's support of "reactionary" political elements in Belgium, Italy and Greece. During that year, Churchill participated in two important conferences abroad—one in September with Roosevelt in Quebec for discussion of further global strategy and the other in October with Stalin in Moscow, where the discussion centred on Balkan and Polish policy.

In 1945, the original "Big Three"—Churchill, Roosevelt and Stalin—met for the last time at Yalta (Feb. 4-11). Churchill then conferred with Roosevelt at Malta. This was his last meeting with Roosevelt, who died April 12.

Following the defeat of Germany, the Labourite opposition broke with the government and on May 25, 1945, Churchill reorganized his government without the Labour

party members and led the Conservative electoral campaign. After announcement of the Labourite victory in the national elections (July 26) Churchill, who was attending the Potsdam conference with Stalin and President Truman, relinquished his seat to Clement Attlee, his successor, and became leader of his majesty's opposition.

After the close of World War II, Churchill became increasingly critical of soviet foreign policy. His attitude was reflected in his speech March 5, 1946, at Westminster college in Fulton, Mo., where he called for an Anglo-U.S. "fraternal association" to halt the "expansive and proselytizing tendencies" of the U.S.S.R. The Fulton speech created an international furore; while lauded by anti-soviet factions among the western powers, it was denounced by anti-British and pro-soviet elements in the United States. Pres. Truman, who was present on the platform at the college auditorium, later hastened to deny that his attendance signified his endorsement of Churchill's views.

In another speech in New York city, on March 15, 1946, Churchill reiterated his appeal for an Anglo-U.S. "fraternal association," but added that he did not believe a war with Russia was inevitable or that the rulers of the soviet union wanted a war "at the present time."

The two Churchill talks in the United States received world-wide publicity; the Labourite government in Britain emphasized that Churchill in no way spoke for the government. Meanwhile, Stalin denounced his former wartime ally as a "warmonger." On his return home, Churchill continued his attacks on the Labour government's domestic policy, but largely endorsed its foreign policy.

Church Membership

At the end of the decade 1937–46, the latest reliable figures of U.S. church membership were for the year 1944, published in the 1945 Yearbook of American Churches, compiled under the auspices of the Federal Council of the Churches of Christ in America. The total reported church membership was 72,492,669, or 52.5% of the estimated population. (See Table II.) This was the largest total church membership and the highest proportion of church membership in the total U.S. population ever reported.

Table	1-115	Religious	"Families "	7011

Family	Number of Bodies	Inclusive Membership
Roman Catholic	1	23,419,791
Baptist	23	14,207,775
Methodist	20	10,629,280
Lutheran	20	5,129,147
Jewish	1	4,641,184
Presbyterian	10	2,933,768
Protestant Episcopal	1	2,227,524
Disciples	2	1,981,905
Congregational	1	1,075,401
Latter Day Saints	7	987,315
Reformed	4	979,388
Eleven denominational families	90	68,212,478
Other denominations	166	4,280,191
All denominations	256	72,492,669

The picture will be brought into clearer focus if we remember that the denominations could be grouped in "families," each containing a number of bodies which were separately organized but went back, more or less directly, to a common origin. There were 11 such U.S. "families" in 1944, according to the 1945 Yearbook, with a membership of 1,000,000 or more members each, as indicated in Table I.

In the Christian Herald for June 1946, there was published an incomplete compilation of official reports of church membership for 1945, confined to the 55 denominational bodies with more than 50,000 members each. This

report showed a total for these bodies of 71,700,142 members, which represented a net gain over the previous year of 1,076,153. The net Protestant gain for the year was 507,167; the net Roman Catholic gain was 543,970. The Jewish congregations took no new survey.

(L. A. WE.)

Church Membership in Europe

Albania.—Albania's 688,280 Moslems comprised twothirds of the population. Orthodox Church members and Roman Catholics totalled 210,313 and 104,184 respectively.

Austria.—Austria's inhabitants were overwhelmingly Catholic. In 1934 Roman Catholics claimed 90.57% of the population; Protestants, 4.38% and Jews, 2.83%.

Belgium.—The population of Belgium was predominantly Catholic. In 1937 there were 6,000 Roman Catholic clergy to 31 Protestant pastors in Belgium. There were two Reformed Churches in the country.

Bulgaria.—In 1934 about 84% of the inhabitants (5,100,000 people) were listed as members of the Orthodox Church, the national faith. Other churchgoers included about 820,000 Moslems, 48,000 Jews, 46,000 Roman Catholics, 23,000 Armenian-Gregorians and 8,700 Protestants.

Czechoslovakia.—The principal confessions, according to the official 1930 census, were: Roman Catholic 10,831,696; Protestant 1,129,758; Czechoslovak Church 793,385; Greek Catholic 585,041; Jewish 356,830; Orthodox 145,598 and Old Catholic 22,712.

Denmark.—The established church of Denmark was Lutheran, but complete religious toleration was extended to every sect. According to 1937 estimates, fewer than 50,000 Danes were non-Lutherans.

Eire.—About 2,730,000 inhabitants (93% of the population) were members of the Roman Catholic Church in 1944. Minority religions, according to 1941 figures, included 145,000 Protestant Episcopalians and 28,000 Presbyterians.

Finland.—The established religion was Lutheran, but complete religious toleration was guaranteed.

France.—The vast majority of the French population was listed as Roman Catholic. The actual number of Roman Catholic churchgoers, as distinct from those born into the Catholic faith, was put at 10,000,000. Protestants and Jews numbered more than 1,000,000 before World War II.

Germany.—The chief religious denominations of Germany in 1933 were: Evangelical 41,080,024; Roman Catholic 12,760,065; Jewish 502,977 and other faiths 2,686,560. Few Germans of Jewish faith survived the nazi slaughters of World War II.

Great Britain and Northern Ireland.—The established Church of England (Protestant Episcopal) claimed a full communicant membership of 2,382,857 as of Easter day, 1936. Presbyterian Churches in 1937 (in Great Britain and Northern Ireland) claimed a membership of about 1,688,000. Methodist members and probationers in Great Britain that year totalled 829,000, while Congregational Churches listed more than 465,000 members. Membership of various Baptist organizations was more than 410,000. The Jewish faith had about 300,000 members. Roman Catholic membership (in England and Wales) was about 2,400,000 in 1937.

In Northern Ireland (1937 figures), Presbyterian churchgoers totalled 390,931; Episcopalians 345,474 and Methodists 55,135; other Protestant sects 59,915. Roman Catholics in Northern Ireland numbered 428,920.

Greece.—The great majority of Greeks belonged to the Greek Orthodox Church. Members of other faiths were (1938 figures): Moslems 126,000; Jews 73,000; Roman Catholics 35,000 and Protestants 9,000.

Hungary.—In Hungary about two-thirds of the post-World War II population were Roman Catholics. The Protestant minority claimed slightly more than one-quarter of the population. There was a considerable Jewish minority in Hungary before World War II.

Italy.—In 1931 it was estimated that 99.6% of all Italians should be regarded as Roman Catholics. However, the growth of the anticlerical leftwing parties after World War II reduced somewhat the over-all following of the Catholic Church in Italy.

Netherlands.—Roman Catholic membership according to the 1930 census was 2,890,022. Membership in the Dutch Reformed Church was 2,732,333. Additional Protestant sects were Old Catholic Church (nonpapal Catholics) and Mennonites (numbering about 60,000). A small Jewish minority resided in the Netherlands before World War II.

Norway.—The state religion was the Evangelical Lutheran. With the exception of Jesuits, other religious bodies continued to be tolerated. The "dissenting" religions totalled 91,459 in 1930, including 12,000 Methodists, 8,000 Baptists and 2,800 Roman Catholics.

Poland.—Approximately 64% (about 22,000,000 people) of Poland's prewar population was Roman Catholic. Prewar estimates of other confessions follows: Greek Catholics 3,500,000; Orthodox Church 3,800,000; Jews between 3,000,000 and 3,500,000 (most of whom were slain by Germans in World War II); Protestants 700,000.

Portugal.—The vast majority of the population was Roman Catholic; Protestants numbered about 5,000.

Rumania.—Before World War II, Rumania's actual and potential churchgoers were distributed as follows: Orthodox Church 13,200,000; Jews 1,500,000; Greek Catholics 1,427,000; Roman Catholics 1,200,000; Reformists 720,000; Lutherans 400,000; Moslems 260,000 and Unitarians 75,000.

Spain.—Catholicism was restored as the state religion after the Civil War (1936–39). The miniscule Protestant minorities were severely repressed by the Franco government.

Sweden.—The majority were members of the Lutheran Church, which was the state religion. Other sects were small in number.

Switzerland.—Members of the Reformed Church in 1930 totalled 2,230,536; Roman Catholics 1,666,317 and Jews 17,973.

Turkey.—The majority of inhabitants were Moslems, although Islam no longer was legalized as the state religion. Other confessions included: Orthodox Church 125,000; Jews 79,000; Roman Catholics 32,000 and Protestants 8,486.

U.S.S.R.—The Orthodox Church, which was disestablished by the Russian revolutionists in 1918, regained official recognition during World War II. The probable number of Orthodox adherents was put at 60,000,000.

Yugoslavia.—The estimated prewar membership of Yugoslav denominations was as follows: Serbian Orthodox Church 6,785,000; Roman Catholics 5,217,000; Greek Catholics 44,600; Protestants 231,000; Moslems 1,561,000 and Jews 63,000. (See also Religion.)

Church of England

William Temple, archbishop of Canterbury for two and a half years only, enthroned on April 25, 1942, stood out as the guiding spirit of the church during the eventful decade, 1937–46. While he was still archbishop of York his leadership was recognized and followed. After his sudden death (Oct. 26, 1944) the church navigated its course according to the compass bearing he had set.

The years immediately preceding World War II were a time of recovery after parliament's rejection of the proposed new prayer book (1927-28) and the fierce controversy in the church which occasioned it. The number of deacons ordained annually rose to an average of 557. Improvements were noted in the statistics of baptisms, confirmations and Easter communicants. Diocesan contributions to the central church fund steadily increased. In 1939, 38 new churches were consecrated, making a total of 263 to be built during 1930-39, or double the number built during the previous decade. These healthy signs were symptomatic of an active and more hopeful spirit in the church, which the common effort and urgency of war developed and reinforced. Both clergy and people rose to the crisis of war with self-sacrifice that went far to re-establish the waning influence of the church at the centre of national life. Although the losses suffered through air raids in architecture and artistic treasure in

churches were far less than might have been expected, the total cost of restoring or rebuilding 456 cathedrals and churches and repairing a further 3,353 entailed a huge expenditure which government war damage grants only partially relieved. In addition, vast government rehousing schemes necessitated a further huge outlay and the extension of the Reorganization Areas measure (1943) to include new housing as well as bombed areas. Even more serious was the closing down and dislocation of parochial activity through evacuation, conscription and blackout precautions. Above all, the church was crippled by an acute clergy shortage. Parishes already understaffed were called upon to provide chaplains for all three services, despite the shrinkage of ordinands to only 159 in 1945.

Nevertheless, the church rose to the occasion. During World War II, diocesan contributions to the central church fund increased each year from £112,132 in 1939 to the new record of £140,030 in 1945. At the end of the war, before the church considered its own needs, its thank offerings on V-E day were devoted towards the £250,000 promised by the Church of England for Christian reconstruction in Europe, and on V-J day towards a pledged gift of £100,000 to the Anglican daughter church in China.

Discovery of the Church.—In the extremity of its ordeal, the nation discovered the stabilizing inspiration of the church, thronging its cathedrals and churches on great national days of prayer and then of thanksgiving, and investing D-day with the sanctity of a crusade. The people, too, discovered the clergy. At home, parish priests in general stood out as key men in their neighbourhoods. Abroad, millions of fighting men came to know their padres and to recognize their worth. In the three services the number of clergy who served as full-time chaplains was 2,703. Of these, 58 were killed, 72 wounded, 86 became prisoners of war and 388 received decorations. Led by Archbishop Temple, the church discovered itself to the people. In Jan. 1941 the Malvern conference, summoned by Dr. Temple under the auspices of the Industrial Christian fellowship, endorsed the ten foundations of peace put forward in a joint letter to The Times (Dec. 23, 1940) by the leaders of church life in England. The following year Dr. Temple's first act on becoming primate was to conduct a series of meetings in great cities affirming the right and duty of the church to lay down principles which should govern the ordering of society.

Reorganization.—The anxiety of the church to plan for the return of men and women from war service was reflected in an activity, both in convocation and the church assembly, that was astonishing even apart from the extreme difficulty of travel and the loss of the new church house at Westminster, four months after it had been opened by the king in June 1940.

Financial and administrative reforms largely followed a reorganization policy submitted by the bishops to the assembly and diocesan conferences in 1943. The Episcopal Endowments and Stipends measure received the royal assent in 1943, and the Episcopal Pensions measure in 1945. The pensions board increased all pensions from £200 to £250. The ecclesiastical commissioners and Queen Anne's bounty were amalgamated by 1946. The ecclesiastical commissioners, by their K-scheme (1943), which doubled seven-year covenants undertaken by parochial church councils, added (by the end of 1946) £223,000 to the annual income of incumbents, depleted by £475,000 a year through the Tithe act of 1936; and followed this by a more equitable arrangement of curacy grants. As

laymen were reluctant to subscribe the new money required by the rise in cost of living unless there was some modification of the "parson's freehold," the assembly gave much time to the framing of two Incumbents' (Disability and Discipline) measures, after all diocesan conferences had been consulted.

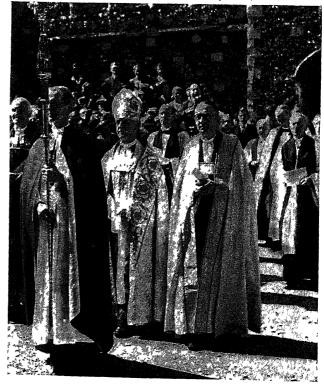

Equally far-reaching were the measures taken for greater pastoral efficiency. The convocations followed up a commission on baptism (which reported in 1940) with another on confirmation which referred its interim report to the consideration of diocesan synods in 1945. In 1945 they approved for experimental use an amended revised lectionary, and in 1946 substituted for canon 99 (1603) a new table of kindred and affinity, in accordance with the findings of a commission which had reported in 1940.

The church assembly set up a Church of England youth council in 1942; reorganized the supervision of church training colleges in 1944; and in 1944 and 1945 considered the proposals of two reports designed to make fuller use of the contribution of women in the service of the church.

Even more important was the entire reorganization of the Central Advisory Council of Training for the Ministry to implement the long-awaited report (1945), Training for the Ministry, and to arrange for the selection and training of service candidates from the 5,000 who desired to be ordained. To meet the latter emergency the archbishop of Canterbury in 1946 asked the dioceses to contribute £600,000 in the next five years.

Occumenical Co-operation.—The patient growth of occumenical co-operation, which Archbishop Temple in his enthronement sermon called "the great new fact of our era," flowered in 1937 with the Oxford conference on church, community and state ("Life and Work") and the Edinburgh conference ("Faith and Order"). The following year the two streams of the same movement were

Dr. Geoffrey Francis Fisher (wearing mitre), the new archbishop of Canterbury and primate of all England, proceeding to Canterbury cathedral for enthronement, April 19, 1945

merged in a single world council of churches, from which Rome alone was absent. As a consequence, the British council of churches was formed in Sept. 1943 with Archbishop Temple as its first president.

The war undoubtedly stimulated occumenical co-operation. Religion and life weeks, on a united front, were held all over the country. In 1944 there took shape the Coventry scheme of an interdenominational centre for religious and social work in close connection with its cathedral, when rebuilt.

Most important of all, on Aug. 15, 1941, Archbishop Cosmo Gordon Lang led a deputation, which included free church leaders, to confer with the minister of education. The "Five Points" they submitted were all implemented in the Education act of 1944, which ordained that henceforth Christian teaching and religious worship should form part of the curriculum of both primary and secondary schools.

According to Archbishop Temple in his enthronement sermon, the rise "almost incidentally" of oecumenical co-operation was "the result of the great missionary enterprise of the last one hundred and fifty years." Naturally, therefore, the scheme for church union in south India, begun in 1919 and blessed by the Lambeth conference of 1930, advanced to a stage that called for pronouncements from the Church of England. Strong controversy ensued and continued despite weighty reassurances tendered in full synod to the convocation of Canterbury by both Archbishop Temple (1943) and Archbishop Geoffrey Fisher (1945).

Evangelism.—In 1938 the commission on Christian doctrine, appointed in 1928, issued its report, Doctrine in the Church of England. While demonstrating the comprehensive character of the church, the report (notably the preface of its chairman, Dr. Temple) vindicated the orthodoxy of its fundamental beliefs. This was significant of a change of mood in the church from a Pelagian preaching of the automatic progress of men towards perfection, to a biblical theology and a demand for a doctrinal basis in matters of faith and practice.

The war deepened this orthodox reaction against the self-regarding humanism of liberal Christianity, as evidenced by the popularity of such champions of dogma as C. S. Lewis and Dorothy Sayers, and the relative failure of religion and life weeks with their new evangelism of a "social gospel."

This explained the remarkable response to the report of the archbishops' commission on evangelism Towards the Conversion of England (1945), which became a "best seller" in every English-speaking country. The report, dedicated to the memory of Archbishop Temple, based its main contention on the distinction he had drawn between christianizing society and making men and women Christians. The report not only stimulated evangelism in every diocese and almost every parish in the land, but (in response to its findings) the assembly set up a commission to overhaul the publicity agencies of the church, and commissioned the bishops to devise some central coordinating council for evangelism.

Deeply significant, too, of the same doctrinal trend was the number and character of the theological works which appeared in wartime, such as the Anglo-Catholic Signpost series and the evangelical St. Paul's Library. Similarly, Dom Gregory Dix's massive The Shape of the Liturgy was symbolic of a kindred liturgical movement which refused to allow the church to debase the glory of its services, despite its anxiety to welcome multitudes ignorant of the Bible. (See also Anglican Communion.)

Ciano, Galeazzo

Count Ciano (1903–1944), Italian statesman, was born March 18, 1903, at Leghorn, Italy. After studying law, he entered the diplomatic service. He married Benito Mussolini's daughter, Edda, in 1930; six years later he became foreign minister in his father-in-law's government. Ciano utilized his official position to build up the holdings left him by his father and in 1939 he was reputed to be one of the richest men in Italy, with a fortune estimated at \$60,000,000. His foreign policy was pro-German and it was reported that he swayed Mussolini to join Hitler's side in World War II. This influence was subsequently denied by Edda Ciano.

After successive axis defeats in 1942, Ciano joined up with the fascist faction that wanted to sign a separate peace with the Allies. Reports that Ciano had joined the defeatist "peace" faction led to his removal from the foreign office; in Feb. 1943 he was appointed envoy to the Vatican. Ciano was among those who demanded Mussolini's ouster during the historic grand council session of July 24, 1943.

After the duce's resignation, Ciano fled from Rome, but in Nov. 1943 it was disclosed that he had been captured and jailed in a Verona prison to await trial before a neo-fascist court on charges of high treason. Found guilty of these charges, he was executed Jan. 11, 1944, by a firing squad.

He left a Diary, published after his death.

Citrine, Baron (Walter McLennan Citrine)

Baron Citrine (1887—), British trades union leader, was born in Liverpool. He began his working career as an electrician, becoming a district secretary of the Electrical Trades union in 1914. Rising in British trades union ranks, he became general secretary of the Trades Union congress in 1926 and two years later (1928) he was named president of the International Federation of Trade Unions. Citrine enjoyed close relationship with the American Federation of Labor, but his recommendation, made Feb. 23, 1943, that U.S. labour join in an alliance with soviet trades unions was flatly rejected by A.F. of L. leaders. At the sessions of the World Trade Union conference in Paris in 1945, Citrine warned that the British unions

would not be "bludgeoned" into any new world organization by a majority vote. On Oct. 6, 1945, the W.T.U.C. elected Citrine president of its executive committee. On the King's Birthday Honours List, June 12, 1946, Sir Walter was created a baron.

Civil Aeronautics Act

See Airports and Flying Fields; Law.

Civil Aeronautics Administration

The Civil Aeronautics administration evolved and expanded greatly during the decade 1937–46, in part as a reflection of the over-all growth of civil aviation itself, and in part as an instrument for achieving such growth. Probably the greatest single contribution by the CAA to that growth was the Civilian Pilot Training program of 1939–44 (known during its last two years as the War Training service). Under this program the CAA supervised the training by contracting schools of more than 400,000 pilots, the overwhelming majority of whom went on to the army and navy for further training and service.

Another activity of considerable significance to both war and post-war aviation was the Defense Landing Area program. At a cost of \$364,000,000 the CAA built—again through contractors—534 airports, most of them large, for the immediate purposes of the army and navy, but with eventual civil use in mind. After World War II, many of these airports were utilized in civil flying under municipal control, making it possible for the new Federal Aid Airport program to emphasize small fields.

This airport program was presented to congress in the fall of 1944, as the National Airport plan, and enabling legislation (public law 377) was signed by President Truman in May 1946.

The Federal Airways system established, maintained and operated by CAA grew in size from 22,000 mi. to 37,000 mi. of lighted routes, and many new and improved types of air navigation facilities were introduced. Perhaps the two outstanding of the latter were the very high frequency omni-directional radio range, offering the flyer virtually static-free guidance over 120 courses instead of 4, and the instrument landing system, built for installation at 105 airports after many years of development and testing by CAA. The CAA-ILS mobile unit used by the army during World War II under the designation SCS-51, made possible landings in conditions of almost zero visibility, by virtue of a "localizer" signal down the centre of the runway, a "glide path" beam at a 21/2° angle from the runway, and radio marker beacons indicating distance from the "touchdown" point.

The first of 16 foreign offices were established as part of a program to regulate and promote international activities of U.S. civil aviation. At home, the CAA appointed special assistants in each region to stimulate the development of personal flying, and for the same purpose many regula-

tions were liberalized and their administration decentralized or delegated to appointees in the industry.

In terms of organization, the CAA began the decade as the bureau of air commerce in the department of commerce; during the years 1938—40 was a part of the independent Civil Aeronautics authority; and after 1940 operated as the Civil Aeronautics administration, a bureau of the department of commerce. (See also Airports and Flying Fields; Aviation, Civil; Aviation, Military.)

Civilian Conservation Corps

When the Civilian Conservation corps was established in the United States in the spring of 1933, it was an experiment in unemployment relief never before attempted anywhere in the world. It was also a revolutionary policy on the part of the U.S. government to save its natural resources of forest lands and top soil on agricultural lands.

On June 30, 1942, when by congressional action, the corps ceased operations and began to dispose of its assets, it had completed nine and one-quarter years of operation.

Its first object was to conserve the nation's greatest asset—its youth—idle and depressed, unable to secure jobs in the depression years. Its second object was to conserve the nation's other great heritage—its forests and its soil.

In the first few months of its existence, CCC work was mostly hand labour with pick and shovel. It immediately became apparent, however, that to replant cut-over forests, control soil erosion, anchor whole water sheds, fight forest fires and floods, heavy equipment was needed. Eventually, 40,000 vehicles, trucks, tractors, bulldozers and power shovels became tools of the corps.

CCC workers planted 2,356,000,000 trees; constructed 126,000 mi. of roads and built 100,000 mi. of telephone lines, through national forests. They expended 6,660,000 man-days fighting forest fires. They built 6,660,000 small check dams to control soil erosion. They built hundreds of state parks with cabins, artificial lakes, water supply systems, etc. They built water tanks for cattle on western plains, fire lookout towers in forests, air and parachute training fields for the army, and did countless other jobs too numerous to mention here.

During the years of the corps' operation Congress appropriated \$3,181,918,515, of which more than \$200,000,000 was returned to the treasury, making the total cost of the corps' operation \$2,968,690,658. Of this amount, \$662,895,000 was sent to dependents of enrollees taken from their base pay of \$30 per month. In most states, the \$25 per month of enrollee pay sent to his family was deducted from the family relief payments if the boy's family was on relief.

A careful inventory of the work accomplishments of the CCC showed that in a material way alone the return received by the federal government and the states was much

in excess of the dollar cost of its operation, to say nothing of the benefits received by the enrollee himself in education, work training and character. None of the work of the CCC was "made" work; it was necessary conservation work.

In the final report to congress by the director of the Civilian Conservation corps, he pointed out that there was still a vast amount of vital and necessary conservation work to be done to bring back grass to the grazing areas of the west that had been overgrazed for the preceding 25 years; to carry on a tree-planting program on the cut-over and burned-over areas in the country; to do necessary work in soil erosion control. The actual work program would employ 6,000,000 men for four years, according to the director's estimate.

Three million young men passed through the corps. The needs of the armed forces made necessary the closing of the program.

Civil Liberties

Citizens' liberties associated with democratic governments rest on the principle of the sovereignty of the voting population with control by the majority, and without impairment of the liberties of minorities to carry on their activities. Essential to such a system of majority control and minority rights are freedom of speech, press, assembly, organization, equality before the law regardless of race, religion or belief, and protection under the criminal law by resort to the writ of habeas corpus and by guarantees of fair and speedy public trials. Civil liberties demand protection of citizens not only from oppressive acts of government but of private agencies and individuals as well.

The phrase and the concept, originating in western Europe and the United States in the almost synchronous emergence of capitalism, republicanism, the nation-state and Protestantism, spread over large parts of the world to express the natural desires of all peoples for freedom to control their governments, to form their associations and to carry on propaganda for any ends, political, economic or social. But they were blocked by traditionally autocratic governments, by the rise of fascist states, and in all of the dependent colonial countries, mandated areas and islands by alien imperialist controls.

Civil liberties existed in 1937 in strength complete enough to be reasonably effective guarantees only in 26 of the 75 sovereign states of the world—about a third: (Great Britain, Ireland, Australia, Canada, New Zealand, the United States, France, the Scandinavian countries, the Baltic states, Switzerland, Finland, Austria, Czechoslovakia, Iceland, Mexico, Belgium, the Netherlands, Chile, Costa Rica, Colombia and Uruguay).

Countries with a degree of these liberties not sufficient to be controlling totalled about 14: the Union of South Africa (for whites only), Poland, Hungary, Greece, Bulgaria, Egypt, Argentina, the Central American republics, Cuba and Venezuela.

Absolute dictatorships, denying the substance of such liberties marked 14 countries: (the soviet union, Japan, China, Siam, Italy, Germany, Spain, Albania, Turkey, Brazil, Haiti, Santo Domingo, Portugal and Peru). The rest of the 75 sovereign states inclined toward the absolutism of the one-party dictatorships. The colonial, man-

dated countries and islands varied in the degrees of freedom accorded the natives by the ruling power, but final authority was always alien and arbitrary.

Gauged by population in 1937, less than one-fourth of the world's people lived in countries enjoying the advantages of democratic liberties; almost one-half in sovereign dictatorships or quasi-dictatorships; and more than a fourth in colonial countries. In two countries—Spain and China—war, enemy of all civil liberties, was raging.

The forces of the time were all hostile to the extension of the democratic principle. The rise of fascism, the preparations for war, the growth of economic nationalism all circumscribed democratic processes. The fear of the spread of communism had prompted many countries to outlaw the Communist party. The stirrings of revolt among many colonial peoples were met with drastic repression. The threatening expansionist power of Germany. Japan and Italy found responses in many lands where the fascist system seemed an answer to the fear of the rise of labour and the Left. The victory of fascist forces in the Spanish civil war found an echo in the Spanish-speaking countries of the new world, where similar reactionary movements gained headway.

The appeasement of fascism, which marked the democratic states almost up to the out-break of World War II, led to restraints on anti-fascist forces in those countries, particularly marked by interference with the supporters of the Loyalist Spanish government. Democratic liberties were at low ebb even in many countries which most stoutly professed them.

The nazi-soviet pact of 1939 and the war which immediately broke out with Germany's eastern frontier thus secured, resulted in further restrictions on the liberties of Communists who opposed the war as imperialistic, since Russia was not involved. With the attack on Russia in 1941, the Communists at once became the militant supporters of the war and champions of democracy, with consequent relief from restrictions.

Military authority, always hostile to civil rights, became supreme in many areas and activities. Conscription was universally applied, and in England included women. Martial law prevailed, of course, in active military areas, and in the United States was even extended to Hawaii, where the U.S. supreme court later held it to be unlawfully applied.

Conspicuous among the war measures justified on grounds of security, which raised questions of violations of civil liberty were: (1) in the United States, the evacuation from the Pacific coast and detention in camps of the entire population of Japanese blood; (2) in South America the transfer to the United States for internment of more than 5,000 axis aliens—German, Italian and Japanese; and (3) in England the internment without public trial of hundred, of British citizens associated with the British union of fascists.

Restraints on Jehovah's Witnesses because of their antiwar religious doctrines and refusal of military service marked many countries where they were imprisoned by the thousands and where their organization was in some countries outlawed. In other countries the distribution of their literature was banned, and their representatives were barred from international travel.

War censorship of cables and radio was charged in many countries with going far beyond the needs of military security, though not nearly to the extent of World War I.

Despite the necessary suppression of dissent during the

war and the many autocratic measures held to be essential to military security, the goals of the war were formulated in the most advanced terms of democratic faith. The "Four Freedoms" (q.v.) voiced by President F. D. Roosevelt as the aims of the United States before its participation in the war were accepted universally by the anti-fascist nations. The first two of the freedoms were a restatement as slogans of the principles of civil liberty-freedom of speech and press everywhere in the world, and freedom of religion. The other two, freedom from want and freedom from fear, carried the implications of meeting human economic needs and of averting wars-obviously the necessary conditions for extending civil liberties. President Roosevelt's concepts for the United States were further elaborated in the Atlantic charter, voiced by him and Prime Minister Winston Churchill, and later embodied in declarations signed by leaders of all the Allied nations. Thus the greatest of all wars became officially a war for democratic liberties and the extension to the entire world of the concepts marking the western politically democratic world.

The goals thus formulated had a profound effect on the peoples of the western countries, who made them their own. The gulf between professions and practices was quickly pointed out by the subject colonial peoples and the darker races. In the United States the Negro minority conducted a militant and bitter campaign for recognization of their rights as citizens in a war for democracy which they proposed to win also at home. For the first time the federal government, in response to Negro pressure, established a fair employment practices committee to secure work without racial discrimination. The racial oriental exclusion act was repealed as it affected the Chinese ally, and after the war the repeal was extended to East Indians and Filipinos. Discriminatory practices in the armed forces were somewhat modified by opening all branches to all races, the last being the opening of navy service to Japanese-Americans after the war. In India, Indonesia and Indo-China, Burma and elsewhere in the subject colonial countries, nationalist movements took on added strength even under the Japanese occupation. In all these movements the spirit of civil liberty embodied in the Four Freedoms and the Atlantic charter (though repudiated by Prime Minister Churchill as to the empire) animated the resistance. It affected, too, the resistance movements in the occupied countries of Europe, just as it stirred the masses of the people everywhere.

When the Allied nations met at San Francisco, Calif., in April 1945 to draft a charter for the organization of peace, the principles of civil liberty found a ready reception. For the first time in history, guarantees of racial equality, self-government for dependent peoples, democratic liberties, human rights were all spelled out in a basic document.

But it became evident even before the conclusion of the war in 1945 that one of the Allied nations, the U.S.S.R., entertained quite contrary concepts of democratic liberties. Civil liberties in the accepted western sense seemed to the soviet union mere political rights without substance in the economic and social spheres, concealing the dictatorship of capitalism and imperialism. To the soviet union, democracy meant the abolition of private ownership of land and industry, and government in the interests of producers and consumers, not property-owners. Under such a government, since the interest of the governing party and the people were one, civil liberties were unimportant—a conception largely negated by the vast powers of the secret political police in suppressing dissent and by the all-per-

vasive censorship of radio, press and travel.

The conflict thus emerging from the war marked the debates of the United Nations, the conduct of the joint control commissions in occupied countries, the conferences to draft peace treaties, and the liberated countries to which the Allied governments made guarantees of democratic rights. The concept of civil liberties only for supporters of the soviet view and the corresponding communist policies in any country ran into a head-on collision with the traditional guarantees for all people regardless of view. The soviet and communist view would outlaw "fascists," reactionaries, race-baiters and others from the protections of civil liberties; and the formulation was commonly extended to encompass "all those who are not with us."

The soviet emphasis in world councils was on those aspects of civil liberties where the western world was weakest—racial equality before the law, protection of minority peoples, colonial independence and the greater role of organized labour. No concessions were made to breaking down the isolation of the soviet union or countries in its sphere of influence by permitting free access to journalists, motion picture news reel representatives, travellers or by adopting facilities for international radio transmission.

Despite this impasse in internation councils, civil liberties made advances after the war even beyond their state in 1937. By the end of 1946, the colonial countries had undergone a conspicuous change in the spirit and accomplishment of self-government; four had won their formal independence and had embarked on what appeared to be a democratic road with varying degrees of civil liberty-India, the Philippines, Indo-China (portions of it) and Indonesia (Java and Sumatra). International trusteeships with the promise of civil liberties appeared to be the system in the making for many dependent peoples. International agencies tying together popular movements all over the world grew apace and were encouraged by United Nations provisions for formal co-operation with nongovernmental agencies. Movements for conventions to promote freedom of the press, radio, travel and motion pictures on a world scale took on unprecedented vigour.

The growth of nationalization of industry in many European countries after World War II was challenged as hostile to the interests of democratic liberties on the theory that the more government the less liberty—a theory not apparently borne out in fact by the practices of Social Democratic and Coalition governments.

In most countries which had already firmly established the practice of civil liberties, they were extended after the war on stronger foundations, both practically and legally. That fact was attributable in most of these countries to the greater strength of organized labour and of the political parties of the Left with a democratic program.

In actual count as compared with 1937, it appeared at the end of 1946 that somewhat more than a third rather than a fourth of the world's peoples lived under governments with effective guarantees of civil liberty. Added to those listed for 1937 were the colonies on their way to independence and the occupied countries of Germany, Italy and Japan, where civil liberties were more or less successfully established in principle if not wholly in fact. No countries with effective civil liberties in 1937 lost them, save for the Baltic republics incorporated in the soviet union. The lip-service paid to the principles of civil liberty and democracy even in the dictatorships, despite contrary applications and interpretations, promised that the direction of the world's development would be toward the extension of a system still in its early stages of growth, which would appear by its history alone capable of estab-

lishing both stability in the solution of conflict and adequate freedom of opinion and action for individuals and groups alike.

Great Britain.-The highwater mark of civil liberty in Great Britain was probably the period 1870-1914. The aftermath of World War I and the preparation for World War II produced in parliament, in administration and in the courts less regard for liberty, although it was still spoken of politely. The period under review opened with the Public Order act, 1936, passed ostensibly to deal with Sir Oswald Mosley and his supporters. The prohibition of uniforms and control of processions effected by this act were all to the good, although the ban on non-fascist processions imposed by the authorities afterward was surprising. The dangerous clause in the act was that providing for a substantial fine or imprisonment for insulting words or behaviour in a public place likely to cause a breach of the peace. This was first used against miners on strike in Nottinghamshire. The conduct of the police in the same period gave rise to much disquiet. In London particularly some of them showed partiality to fascists and used unnecessary brutality when dealing with demonstrators and anti-fascist meetings.

With the Emergency Powers (Defense) act of Sept. 1939 and the two amending acts of 1940, the government assumed legislative powers with the exception that they might not provide for trial of civilians by court martial. Numerous regulations restrictive of liberty were made, including regulations against disaffection, words causing alarm or despondency and powers of censorship, one of which was invoked to suppress the Daily Worker for a time. The most famous was perhaps 18B, which in effect suspended the right of habeas corpus and gave the authorities unlimited power to detain anyone to whom they objected. During the invasion scare of 1940 a number of people were detained under this regulation, apparently without justification, since they were soon released. The detainees who remained until the end of the war were those associated with the fascist movement. A number of actions to test the legality of 18B came before the courts, but only one or two judges remembered that even in time of war a law is supposed to be construed favourably to liberty. In the famous case in the house of lords of Liversidge v. Anderson, Lord Atkin said that he had listened to arguments which might have been addressed acceptably to the court of king's bench in the time of Charles I.

Both home secretaries, Sir John Anderson and Herbert Morrison, in the face of far greater dangers, used their general powers of repression in a more enlightened manner than had their predecessors of the years 1914–18. Morrison bravely stood up to national hysteria when in 1944 he released Sir Oswald Mosley, who was no longer considered to be dangerous. Another example of tolerance was the treatment of conscientious objectors to military service. Out of 61,000 objectors (including 1,074 women who appeared before tribunals) 3,203 received unconditional exemption, 30,399 conditional exemption for civil

work, and 15,701 were allowed noncombatant duties only. The Emergency Powers (Defense) act expired at the end of Feb. 1946, but some provisions were temporarily continued by the Supplies and Services (Transitional Powers) act, 1945, and the Emergency Law (Transitional Provisions) act, 1946. Apart from the restrictions on changing employment, the only important regulation left was 39A on disaffection.

The effect of World War I was to diminish the regard for liberty, but this was probably not true of World War II. It showed once again that war and civil liberty are incompatible and perhaps produced in western minds a resolve to maintain their civil liberty by increasing and securing economic freedom.

Civil List, British

On the accession to the throne of King George VI in Dec. 1936, a new civil list became necessary and this was made up as follows: his majesty's privy purse, £110,000; household salaries and retired allowances £134,000; expenses of the household, £152,800; royal bounty, £13,200; total, £410,000. This total was the same as that for King Edward VIII had he married while on the throne. As he was unmarried, it was reduced by £40,000.

Net revenues of the duchy of Cornwall, vested in the king till the birth of a duke of Cornwall, amounted to £117,604. After the deduction of sums equal to the proposed annuity for Princess Elizabeth and the additional annuity of £10,000 paid to the duke of Gloucester, the balance was made available by the king's desire for the reduction of the amount payable from the consolidated fund of the civil list.

Amounts payable to individual members of the royal family were as follows: Queen Mary, £70,000; Princess Elizabeth, £6,000; Princess Margaret Rose, £6,000; duke of Gloucester, £35,000; Princess Royal, £6,000. If widowed, Queen Elizabeth would receive an annuity of £70,000, and the list allowed for an additional amount of £9,000 to Princess Elizabeth on her reaching the age of 21 on April 21, 1947, provided no duke of Cornwall had been born.

The Civil List Pensions act, 1937, raised the amount granted in any one year from £1,200 to £2,500, with the effect of increasing the total amount disbursed annually from £23,000 to about £50,000. Space does not permit inclusion of the complete list of pensions granted after 1937, but among them were the following granted for various services to scholarship and culture: 1937, £130 to Dr. Maurice Copis Arrow; 1938, £210 to the three children of James Leslie Starkey; 1938, £160 to Rutland Boughton; 1939, £110 to John Hassall; 1939, £200 to Commander J. R. F. Wild; 1940, £170 to Julius Olsson, R.A.; 1940, £170 to Richard Sickert; 1941, £140 to Frederick Britten Austin; 1941, £120 to the widow of W. H. Davies; 1943, pensions ranging from £120 to £200 were granted to Conal O'Riordan, E. A. Jones, A. R. Hayward, Miss Mary P. Willcocks and the Rev. Robert Elvet Lewis. The minimum pension granted remained f_{100} .

Civil Service

Viewed in retrospect, the ten years ending in 1946 spanned a decade of extraordinary development in civil

service and government personnel administration in the United States. To give this era of progress its proper perspective, the fact should be mentioned that the civil service reform movement in government was more than 60 years old when the period opened. The foundation of a civil service system had first been laid in the federal government in 1883 with passage of the Pendleton act. The same year New York became the first state to enact a similar law, but during the ensuing 50 years progress in the direction of civil service reform in other states and municipalities was sporadic. By the late '30s, 8 additional states had enacted civil service statutes, and similar legislation was found in approximately 650 municipalities.

The years 1937–46 marked a sharp acceleration in this trend. Within that relatively short interval, 14 additional states adopted civil service legislation, and the number of municipalities having such laws reached 1,200 or more. In a few instances, negligible in comparison with the total, civil service laws were repealed, and in some localities where laws were technically in effect, various devices were employed to nullify them. But these instances were exceptional and in marked contrast with the general citizen interest in the improvement of its public service. A nationwide poll of popular sentiment regarding civil service, conducted by the American Institute of Public Opinion in 1936, disclosed that 88% of those polled favoured it.

Many factors contributed to this decade of civil service growth, but no one factor, standing alone, accounted tor it. Popular demand for economy and efficiency in government, born of the depression years, furnished much of the momentum. Steady campaigning on the part of the National Civil Service league gave direction to the movement, and the efforts of this organization were abetted by several other national and local civic groups, including the League of Woman Voters and the U.S. junior chamber of commerce. Two significant studies in the field of governmental administration gave added impetus to the movement. These were the reports issued by the Commission of Inquiry on Public Service Personnel and by the president's Committee on Administrative Management. The first of these dealt broadly with the matter of improving the quality of the public service at all levels of government. Its findings and recommendations. first published as a series of monographs in 1935, exerted considerable influence on the developments of the next several years. The report of the president's Committee on Administrative Management, in dealing with the manysided matters of federal administration, gave major emphasis to needed improvements in federal personnel machinery in its report published in 1937.

Federal Developments.—An outgrowth of this study of federal management methods was a series of executive orders by President F. D. Roosevelt. One, issued in June 1938 extended the federal civil service system to more than 100,000 positions not previously covered. The same order also strengthened personnel administration in the numerous federal departments, and called for establishment of departmental personnel officers. The Federal Council of Personnel Administration, a group of personnel officials which had hitherto played only a minor role in the coordination of personnel policies, was given new stature and responsibilities.

During the next several years, a considerable amount of congressional legislation contributed further to the expansion and improvement of the federal civil service. Among such statutes were several sponsored by Congress man Robert Ramspeck of Georgia and Senator James Mead of New York, broadening the scope of coverage of the civil service law; and an act sponsored by Senator Carl Hatch of New Mexico, banning political activity by federal employees. In 1945, and again in 1946, Senator Sheridan Downey of California sponsored measures resulting in substantial increases in the pay of federal workers. A measure urged by Senator Kenneth McKellar of Tennessee in 1943 threatened to inject partisan politics into top-level civil service appointments. Senator McKellar's proposal, requiring senate confirmation of all appointees to federal positions paying \$4,500 or more, was defeated only after sharp debate.

World War II, which brought unprecedented expansion to the federal service, carried with it greatly increased attention to personnel administration. Recruiting to meet the demands of mushrooming federal war agencies was an incessant problem for the U.S. civil service commission, despite its greatly augmented staff and the active participation of the departments themselves. The problem was further aggravated by abnormally high employee turnover, Numerous devices were used to attack the problem. Federal employees were "frozen" in their jobs; the work week was extended, accompanied by liberal overtime premium pay; and extensive programs of employee counselling were initiated to build morale and minimize unrest.

With the return to peace and its accompanying disbandment of the federal civilian army, major changes were made in the basic pattern of the federal civil service system. Competitive examinations were resumed, and an executive order issued by President Truman early in 1946 laid the foundation for a long-range program to decentralize several of the civil service commission's functions. At the same time, the president's order sought to give to the several federal departments a much greater degree of responsibility than before for the operation of their own personnel programs.

State and Local Government.—During the decade, 12 states adopted civil service laws covering all or most of their state employees. These were Alabama, Connecticut, Indiana, Kansas, Louisiana, Maine, Michigan, Minnesota, Oregon, Rhode Island, Tennessee and Virginia. In Missouri and Nebraska civil service laws were adopted covering limited portions of the state service, and in Georgia a new constitution adopted in 1946 called for the subsequent enactment of a state civil service law.

A provision in the Social Security act which became effective in 1936 required the establishment of civil service merit systems for the personnel of state agencies taking part in administration of the federal security program. As a result, in those states where employees were not already under civil service, so-called "merit system councils" were established for state departments administering welfare, health, unemployment compensation, employment service and other related activities. During the four years 1937–41, more than 40 of these merit system councils were established in the various states.

A New York state supreme court decision concerning applicability of civil service provisions in the state constitution to county and city employees led to widespread establishment of civil service programs in various municipalities in the state. Elsewhere throughout the country, several of the larger cities and counties also adopted civil service legislation. Among the cities doing so were Louisville, Ky., New Orleans, La., and St. Louis, Mo. Counties adopting civil service programs included Jefferson and Mobile counties, Ala.; Sacramento county, Calif.; Fulton county, Ga.; Ramsay county, Minn.; and Wayne county,

Mich. In Los Angeles, Calif., and Kansas City, Mo., sweeping civic reforms included the reorganization of civil service agencies previously in disrepute.

U.S. Wartime Developments.—The impact of World War II was felt with full force in federal, state and local governments throughout the country. Civil service agencies everywhere adopted new policies and methods to assist in maintaining essential government services in the face of critical manpower shortages. Women were recruited in large numbers to fill gaps left by the drafting of men; restrictions regarding residence and age were discarded, and handicapped persons no longer found their handicaps a barrier to employment. For the most part, employees entering the public service during the war were hired as temporary workers—so-called "war duration" employees.

In the federal government, with its host of new war agencies, the number of employees expanded to three times the prewar level. In 1939, the year before the nation embarked on its all-out rearmament program, there were slightly less than 1,000,000 federal employees. When war broke out, the total had passed 1,500,000, and within a year it had increased by another million. The great bulk of these new employees were in the war and navy departments, which together employed more than half of all federal employees.

The peak level of federal wartime employment was reached in March 1945, when the United States civil service commission reported a total of 2,920,410 employees in the executive branch of the government. Even before the coming of peace, however, a sharp reverse trend set in. From the high point in the spring of 1945 to the end of 1946, approximately 700,000 federal employees were laid off, and the decline had not yet stopped. The reduction in personnel was hastened by congressional action in 1946, under which gradually decreasing employment "ceilings" were placed on the various federal departments.

In sharp contrast with the marked wartime expansion in the federal civil service, state and municipal public employment declined perceptibly. Draft calls and the lure of high pay in war plants combined to reduce the number of city employees in some municipalities by as much as 15%. Fire and police departments were particularly hard hit, as were many publicly-operated utilities. With the end of the war, many states and municipalities faced the dual task of building up their depleted personnel with new recruits, while at the same time substandard war duration employees were weeded out.

General Trends.—Aside from the unprecedented increase in the number of civil service agencies established during the decade, a number of significant trends emerged during that period. Among these were the rise and growth of public employee unions, a material increase in the number of public employees covered by retirement systems and a considerable volume of legislation giving preference in public employment to war veterans. The latter development, related directly to the war and its aftermath, represented a vigorous revival of a trend that had already reached sizable proportion following the end of World War I.

In addition to the several federal employee unions already in existence, two new national unions of state and local public employees were established. The American Federation of State, County and Municipal Employees, affiliated with the American Federation of Labor, had been founded in 1936. A year later, the United Federal Workers of America and the State, County and Municipal Workers of America, both affiliated with the

Congress of Industrial Organizations, had their origin. The two C.I.O. unions later merged, and became the United Public Workers of America in 1946. Although accurate figures on the proportion of public employees belonging to unions were not obtainable, the ten-year trend was unmistakably in the direction of increased unionization. By 1946, more than half of all U.S. cities of more than 10,000 population had one or more organizations of employees. In addition to local units of the national unions, there was also a substantial number of independent state and local government employee organizations.

Strikes of public employees were relatively few compared with those in private industry, particularly during the war years. At the same time, there was a considerable amount of dissension over the proper scope of unionization in the public service, centring chiefly about the issues of collective bargaining, the closed shop and the right to strike. On this last point, congressional opposition found expression in 1946 in a mandate requiring all federal employees to sign a pledge not to strike against the federal government.

The fact that public employees were excluded from coverage under the Social Security act furnished strong impetus to the establishment of numerous state and local public employee retirement systems during the decade. Systems established during this period exceeded by a substantial margin the total number that had been established up to that time. A notable feature of the trend was a tendency toward setting up state-wide co-operative retirement systems in which municipalities within the state could join. Among states in which such systems were established were Illinois, Michigan, Oregon, Pennsylvania and Wisconsin. Outside the federal service, public employees groups who were most extensively covered by retirement systems were school teachers, firemen and policemen; those with the least degree of retirement protection were, in general, workers in the smaller municipalities.

Veterans' preference legislation, a logical by-product of the war, grew in volume as the war drew to a close. In the federal civil service, the Starnes-Scrugham act gave statutory sanction to preference policies already contained in the rules of the U.S. civil service commission, and at the same time extended such preference in several new directions. Similar measures were adopted in many state and local governments for the first time; in others, existing legislation was amended to increase its scope. Veterans' preference provisions were written into the state constitution of several states, including Colorado, Georgia and New York. By the end of 1946, the trend had progressed to the extent that only a handful of governmental jurisdictions remained in which no veterans' preference provisions were found.

Aside from these surface trends which the decade produced, there were also a number of undercurrents in civil service administration related to the general direction of the public administration movement of the period. Perceptibly less emphasis was placed on the policing features of civil service laws, and more effort was directed toward rendering positive assistance to public officials in improving the calibre of public personnel administration. This shift in emphasis was reflected in increased use of scientific methods of personnel management, including job classification and pay plans, improved selection methods, employee training and the strengthening of employee morale. The Civil Service Assembly of the United States and Canada, an organization of public personnel agencies founded

shortly after 1900, sprang to life again after dwindling almost to the vanishing point. The revival of this organization and the broadened scope of its activities contributed substantially toward the improvement of personnel administration in the public service during the decade.

Great Britain.—The civil service in 1937 (apart from industrial work people) numbered some 350,000 persons, employed in more than 80 departments. Many departments at that time had begun to feel the pressure of work caused by the rearmament program and the threat of war, and by 1939 the numbers had risen to 400,000. Nevertheless, the general scope and organization of the civil service in 1939 had not greatly changed since 1920.

World War II brought many new duties to nearly all departments. Ten new departments were set up, some for war tasks, others, at a later date, to prepare for reconstruction. The service rose to a peak figure in 1943 of

730,000, and at the end of 1946 stood at a figure of 720,000.

To meet this great increase in duties and to replace permanent civil servants called up for military service, men and women were brought into temporary government service during the war from many walks of life, commerce and industry, the professions, the universities and scientific research. The whole decade, and particularly the war years, was a period of intense and sustained effort for the service.

A number of departments created during the war were made permanent, and the legislative program of the Labour government which took office in 1945 added permanently to the duties of the civil service. Moreover, the functions of government had broadened in scope, and involved much closer contact with the life of the community at many points.

Permanent recruitment was suspended during World War II. In 1946, a major program of recruitment was started, to make good arrears, to replace temporary civil servants gradually returning to their normal occupations and to provide for permanent expansion. A series of competitions was to be held over a period of about three years, the main principle being to afford opportunities to those who might have competed but for the war. Opportunities also were offered to the best qualified of the wartime recruits to stay on a permanent footing. Those retained permanently included some who had been appointed to the highest ranks in the service.

Steps were taken to adapt the service to changing postwar conditions. Thus, greater stress was placed in recruitment to the higher grades on personal qualities which could be tested by interview rather than by written examination. Much more was done to train civil servants for their duties after entry to the service. Greater use was made of special skills—the scientists, economists, statisticians and technicians of all kinds were enabled to increase their contribution to the work of government; and greater attention was given to methods of work and to problems of organization. Civil War in Spain

See Spanish Civil War.

Clark, Mark Wayne

Clark (1896—), U.S. army officer, was born May 1, 1896, at Madison Barrack, N.Y., where his father, Col. Charles C. Clark, was then stationed. He was graduated from the U.S. military academy at West Point (1917) and was wounded in action on the western front in June 1918. He was a graduate of the Command and General Staff school (1935) and the Army War college (1937).

Clark arrived in England in July 1942 to assume command of U.S. army ground forces in the European theatre. In Nov. 1942 he was in command of U.S. forces that participated in the Allied landings in North Africa. Three weeks earlier, Clark headed a group of U.S. officers that had secretly landed in North Africa and obtained an agreement for assistance from French officers friendly to the Allied cause.

For this mission, he was awarded the congressional medal of honour and was promoted to the rank of lieutenant general.

Gen. Clark was in command of the Allied 5th army that invaded Italy in Sept. 1943 and in Nov. 1944, he succeeded Field Marshal Alexander as commander of the Allied 15th army group in Italy. He was appointed, March 13, 1945, to the temporary rank of a full general. The following month, he launched the final assault against German troops in Italy.

On May 2 the German forces in northern Italy and in some sections of Austria laid down their arms to Clark's armies.

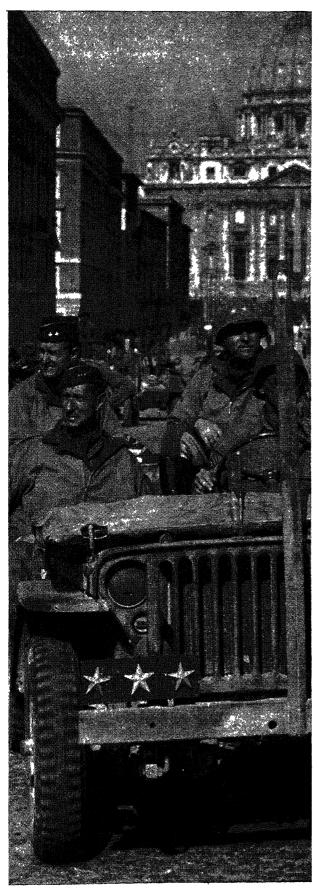

He was then named (June 28) commander of U.S. occupation forces for Austria.

In early 1946, a group of former officers of the 36th division that fought in Italy under Clark asked the senate Military Affairs committee not to approve his promotion to the permanent rank of major general; they charged that his "blunders" caused needless bloodshed in the Rapido river crossing in Italy. The war department in reply asserted that Clark had exercised "sound judgment" in planning and ordering the crossing on June 20; his promotion was confirmed.

Clark, Thomas Campbell

Clark (1899-), U.S. lawyer and attorney general, was born Sept. 23, 1899, in Dallas, Tex. He received his law degree from the University of Texas (1921), and was civil district attorney of Dallas county, 1927-32; in 1937, he was appointed special assistant to the U.S. attorney general. The following year he was shifted to the department's antitrust division. Later, he was named coordinator of alien enemy control in the Western Defense command and was, in May 1942, made head of the War Frauds unit in the antitrust division, the department of justice. Made assistant attorney general of the antitrust division in March 1943, he waged active warfare against cartels which he characterized as "private economic super-governments," and the following August he was appointed head of the justice department's criminal division with authority extending to the War Frauds

President Truman named Clark to succeed Francis Biddle as U.S. attorney general, May 23, 1945. Clark, who assumed office June 30, ordered prompt prosecution of

Lt. Gen. Mark W. Clark passing St. Peter's in his jeep after the Allied capture of Rome, June 4, 1944. He was accompanied by Major Generals Alfred M. Gruenther and Geoffrey Keyes

black market cases and instituted a drive to round up income tax evaders. On Sept. 17, 1945, he recommended that congress act to reorganize and subdivide the Aluminum Company of America. He lifted wartime curbs on enemy aliens on Jan. 7, 1946.

Clay, Lucius DuBignon

Clay (1897-), U.S. army officer, was born April 23, 1897, in Marietta, Ga. A graduate of the U.S. military academy (1918), he was an instructor at an officers' training school during World War I. He also graduated from the engineering school in 1920 and was associated with a number of army construction and engineering projects in the interlude between the two world wars. In March 1942, he was made deputy chief of staff for requirements and resources in the Army Service of Supply and was promoted to temporary rank of major general (Dec. 1942). As the war drew to a close, he opposed implementation of reconversion plans on the ground that the army had to keep its military supplies at peak requirements until the Germans finally surrendered. In Dec. 1944 he was transferred to the Office of War Mobilization and Reconversion as deputy director for war programs and administration.

On March 29, 1945, Clay was appointed deputy to Gen. Eisenhower in charge of civil affairs in occupied Germany; he also was named a lieutenant general the following month. In addition, Clay headed the U.S. section of the Allied Control council for Germany and was deputy military governor of the U.S. zone of occupation.

Clays

A comparison of clay production in the United States over a period of years was handicapped by changes in the method of collecting statistics which made the figures not strictly comparable. The accompanying table shows the outputs of the major types of clays, with the amounts going into the chief uses.

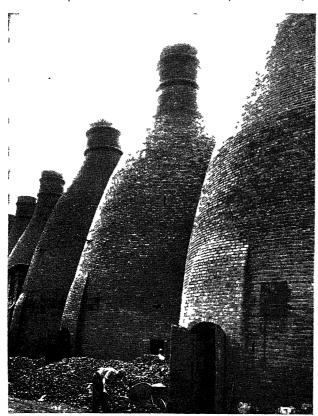

Salient Statistics of the U.S. Clay Industry

	(Tho	usands of sho	rt tons)

*Includes stoneware clay, †Includes brick, drain tile, sewer pipe and similar items of construction material.

In the table the data for 1937 and 1939 covered only clays sold in the open market; those for 1941 and 1943 covered clays sold and those shipped from the point of production even though used by the producer and not sold; only the figures for 1945 covered full output—sales, shipments and clays used by the producer at the point of production. It was in fire clay and miscellaneous clays used for heavy clay products that these differences were most pronounced. While it was unfortunate that directly com-

parable data were not available, the change in the basis of reporting showed some interesting sidelights. Much of the heavy increase between 1939 and 1941 was accounted for by the inclusion of shipments, while an even greater increase in 1945 indicated the relative magnitude of the "captive" operations not previously included. The distribution by uses indicated the versatility of most clays,

Pottery kilns, shaped like bottles, in the borough of Stoke-on-Trent, centre of fine British pottery

and their adaptability to widely different uses. For example, "china clay" (kaolin) went into paper, and more went into rubber and into refractories than into ceramic products. (See also Bentonite; Fuller's Earth.)

Cleveland

Largest city in the state of Ohio and sixth largest in the United States, Cleveland had a population of 878,336 when the federal census was taken in 1940. Although the population of some of its suburbs increased rapidly during World War II, Cleveland in 1946 probably had about the same population as it did in 1940. Area, 73.1 sq.mi. Cuyahoga county, which includes the major suburbs as well as Cleveland, had a population of 1,217,250 in 1940. Its estimated population in 1946 was 1,250,000; its area, 463 sq.mi.

Four mayors headed the city's government during the 1937-46 period, and two of them demonstrated that the mayor's office was a stepping-stone to higher political positions. Harold H. Burton (Republican) was re-elected mayor in 1937 and again in 1939. In 1940 he was elected to the U.S. senate and subsequently was appointed an associate justice of the U.S. supreme court. When Burton

resigned as mayor in 1940 the city's law director, Edward Blythin, succeeded him. Blythin was defeated in 1941 by Frank J. Lausche (Democrat). Mayor Lausche was reelected in 1943 and in the following year was elected governor of Ohio. Upon Mayor Lausche's resignation in Jan. 1945, Thomas A. Burke, Jr., the law director, became mayor. Burke, another Democrat, was elected in 1945 to a term that expires in Nov. 1947.

Although Cleveland's budget gradually expanded during the ten-year period until it reached an all-time high of \$21,000,000 in 1946, the city's financial health improved; the municipality managed to reduce its debt materially in spite of large capital expenditures and was able to borrow money at low interest rates.

Unemployment relief was the outstanding municipal problem in 1937, 1938 and 1939. A series of crises was met by various devices such as transferring funds held for other purposes and issuing bonds against delinquent taxes as well as by considerable assistance from the Federal government.

In 1942 the city government purchased the Cleveland Railway Co. which operated street car, trolley coach and bus lines under a long-term franchise. A bond issue of \$17,500,000 was sold to finance the purchase, and control of the transit system was placed under a three-man board. During the period of gasoline rationing and heavy wartime employment, business boomed for the transit system; by 1946 the city had paid off all but \$1,700,000 of the indebtedness incurred in buying the system.

To keep pace with rising living costs, a series of wage increases was granted to city employees between 1943 and 1946.

Management of the city's Brookside zoo was turned over by the council in 1940 to the Cleveland Museum of Natural History. Mayor Burke in 1945 suspended Police Chief George J. Matowitz on a charge of laxity in permitting open gambling, but Matowitz was exonerated by the civil service commission after a hearing.

There were few changes among the elected officials of Cuyahoga county between 1937 and 1946. Joseph F. Gorman and John F. Curry served as county commissioners throughout the period. James A. Reynolds was the third commissioner until 1944, when he retired because of illness and was succeeded by John J. Pekarek. Martin L. O'Donnell took office as sheriff Jan. 4, 1937. At his death in 1941 he was succeeded by Joseph M. Sweeney, a retired police inspector.

In 1946 the city of Cleveland celebrated its sesquicentennial, the 150th anniversary of its founding by Moses Cleaveland. A series of civic events throughout the year marked the historic anniversary.

No event in history made a deeper impress on the city than did World War II. From Cuyahoga county, 160,000 men and women went into the military services of their country. Of these, 3,378 were killed, and thousands of others were missing or wounded. Many of the war casualties were restored to health in Cleveland at the Crile general hospital, which was dedicated in May 1944. After the war Crile hospital was taken over by the Veterans' administration and, together with the Brecksville veterans' facility completed in 1943, cared for the war veterans in the Cleveland area.

Government bond purchases made in Cuyahoga county in the eight campaigns held in and following the war period exceeded \$2,100,000,000.

The only major disaster in the city in the 1937-46 period was the spectacular fire at the East Ohio Gas Co. liquefying plant on the city's east side Oct. 20, 1944. One hundred and twenty-one persons lost their lives in it, scores of

others were injured, 82 homes and several industrial buildings were destroyed, and property damage was estimated at \$7,000,000.

Considerable major construction work was completed in Cleveland before the material shortages developed as a result of the war. Two outstanding projects were the Main avenue bridge, across the Cuyahoga valley, which cost \$7,200,000 and was opened Oct. 6, 1939, and the Aeronautical Engine Research laboratory of the National Advisory Committee for Aeronautics. The laboratory, located at Cleveland airport, consisted of 15 buildings and represented an investment of more than \$30,000,000. It was dedicated in 1943. Despite labour and material shortages, building permits in Greater Cleveland totalled \$43,-489,760 in 1945. Work was begun in 1946 on a lake front airport, and many other projects were in the blueprint stage. Voters approved bond issues for construction amounting to \$58,000,000. Real estate in the county was valued at \$1,721,614,890 on the 1945 tax duplicate.

The Community Fund idea of combining all drives for charity in a single campaign was originated in Cleveland, and each year it raised from \$3,500,000 to nearly \$6,000,000, depending upon the needs. During the war years the financial requirements of the United Service organizations were included and the fund was called the War Chest. It raised \$5,751,012 in 1944 and \$5,436,548 in 1945. The Cleveland foundation, administering bequests for charitable purposes, in 1945 was the third largest community trust in the U.S.

Bishop Edward Francis Hoban became the first coadjutor in the history of the Catholic diocese of Cleveland in 1943 and became sixth bishop of Cleveland in 1945 on the death of Archbishop Joseph Schrembs. Guy R. Lucas was appointed postmaster of Cleveland in 1945. George Szell became the conductor of the Cleveland orchestra in 1946, succeeding Erich Leinsdorf, who resigned after holding the post for three years. Dr. Artur Rodzinski preceded Leinsdorf as the orchestra's leader.

In Nov. 1940, the doors of the Cleveland health museum were opened for the first time. It was the first permanent health museum in the hemisphere. A campaign was launched in July 1945, to raise \$9,500,000 for the construction of four new hospitals in Greater Cleveland and the expansion of 13 existing ones.

After a suspension of six years necessitated by World War II, the National Air races were resumed at Cleveland airport in 1946. The four-day event drew 180,000 paid admissions. Paul Mantz of Burbank, Calif. won the \$10,000 Bendix derby, flying from Los Angeles to Cleveland in the record time of 4 hr. 42 min. and 10 sec. for an average of 435.6 m.p.h. The 300-mi. Thompson Trophy closed course race was won by Alvin M. Johnston of Niagara Falls, N.Y. with an average speed of 373.9 m.p.h. which also established a new record.

Commerce and Industry.—Completion of the \$6,000,000 river-widening project in 1942 gave the long freighters easier access to the up-river unloading docks and enabled Cleveland to maintain its long-standing record as the leading iron ore receiving port of the world. Heavy demands for steel during the war years kept the freighters running at top speed, and new records were established for ore delivery on the lakes. Cleveland interests controlled about two-thirds of the Great Lakes ore trade. In 1946 small freighters from Norway, Sweden and Belgium resumed their calls at Cleveland to load and unload cargoes, a trade that was halted during World War II.

Statistics for the port of Cleveland for 1937 through 1945 were as follows:

Year	Ore Receipts (Tons)	Coal Ship- ments (Tons)	Grain Receipts (Tons)	Total Freight In and Out (Tons)	Com- mercial Vessels Arrived	Passenger Traffic
1945	13,993,825	1,201,908	106,147	18,656,853	4.045	632,553
1944	13,479,985	1,488,136	106,898	20,526,477	3.052	555,982
1943	15,030,186	883,992	93,254	20,670,793	3.217	284.390
1942	14,650,000	629,325	78,228	21,963,485	4.937	383.611
1941	15,064,978	1,056,016	104,280	21,544,142	5,400	390,504
1940	11,438,391	1,123,988	75,062	17,673,926	4,929	368,808
1939	8,291,390	1,224,073	72,274	14,156,078	4,222	380,918
1938	3,096,662	783,196	53,591	7,121,193	3,393	398,938
1937	11,295,620	1,303,231	51,930	17,385,842	5,314	449,286

In 1946 the strikes of the United Coal Miners and the National Maritime union sailors on the lakes reduced the number of trips up the lakes made by the freighters.

The seven railroads carrying freight in and out of Cleveland were hard pressed to keep up with the traffic during the war years. In round numbers the annual freight car loadings for Cleveland were: 1937, 598,000; 1938, 355,000; 1939, 504,000; 1940, 765,000; 1941, 931,000; 1942, 891,000; 1943, 881,000; 1944, 925,000; 1945, 833,000.

As the ten-year period ended, Cleveland manufacturers were trying to overcome material shortages and other handicaps in order to recapture their normal export trade, which amounted to \$100,000,000 annually before World War II.

Traffic at Cleveland's municipal airport set an all-time record in 1945, when it handled 60,357 transport planes carrying 762,893 passengers but that record was eclipsed in 1946. In the first eight months of that year, 50,529 planes were handled and 768,452 passengers arrived or departed.

The city's largest banking institution, the Cleveland Trust Co., went over the \$1,000,000,000 mark in deposits as the ten-year period drew to a close. Clearing house bank clearings were \$11,529,428,884 in 1945 as against \$11,239,266,654 in 1944. Cleveland postal receipts were \$13,657,508 in 1945 and \$13,501,080 in 1944. In 1944 the Cleveland stock exchange handled the second highest volume of business in its history.

Production in the Cleveland industrial area tripled under the impetus of war demands. In 1939, the last year before the war influence was felt, the value of production in Greater Cleveland was \$996,703,000. In 1943 and again in 1944 the production figure reached or topped the \$3,000,000,000 mark and appeared to be levelling off in the postwar period above the \$2,000,000,000 mark. The number of wage-earners who produced this wealth of manufactured goods rose from 125,876 in 1939 to a peak of 247,400 in 1943. These workers were paid wages totalling \$178,521,000 in 1939 and \$572,300,000 in 1943.

To achieve this wartime production it was necessary to build, expand and reconvert many industrial plants. Cost of new plants erected in Greater Cleveland for war production was \$233,368,000. Expansion of old plants cost \$112,902,000 and reconversion of old plants \$58,966,000. Total war production in the Cleveland Ordnance district was valued at about \$5,000,000,000. Almost every conceivable wartime product was included in this total, but among the most important items were trucks, automotive parts, aeroplane components, machine tools, guns, ammunition, ships, tires, chemicals, radio, electric and electronic equipment.

Establishment in the Cleveland area of new industries in the postwar period indicated that production figures might remain above prewar levels. Among these planned new industries were two General Motors plants to be built at a cost of \$50,000,000.

Clothing Industry

World War II of necessity was the dominant factor in the clothing industry throughout the world during the years 1937–46, and in many instances speeded developments far beyond the normal course of events. New machinery, production methods, styles, construction, fabrics, merchandising methods, supply problems and factories were important items.

Machine Developments.—The manufacture of clothing became primarily a series of machine operations. In most garments manufactured during this era, there was little or no hand sewing and tailoring; all was done on highspeed machinery.

Among the new machines which greatly increased output were several high-speed, self-lubricating, lock-andchain-stitch sewing machines capable of 10,000 stitches per minute. Blind stitch machines, invisibly stitching the sheerest of fabrics at 3,500 stitches per minute, were developed. So called feed-off-the-arm sewing machines appeared for seaming up the sleeves and sides of shirts and jackets as well as trouser inseams and outseams, at tremendous speeds. Machines of various types were introduced to produce better and more uniform buttonholes than could be sewn by the most skilled worker—at hundreds of times the speed. The most radical, if not the most important improvement in "sewing" machines was the development of electronic devices to fuse certain plastics. These machines, while having many of the attributes of sewing machines, did not use needle and thread; they were operated by applying heat to thermoplastic materials, thus creating strong bonds for seams. They were available in many models, such as feed-off-the-arm, straight sewer, bar tack, etc.

In the cutting room, improvements in machinery kept apace of those in the sewing room. Automatic knife sharpeners on cloth cutters saved countless thousands of hours of labour. Machines were designed to prevent fusing of synthetic and plastic fabrics during cutting operations; special cutters were developed for rubber and other unusual materials. Great strides were made in cloth spreading-an operation previously performed primarily by hand. New cloth-laying machines were developed for all widths of fabrics of every weight and fibre; these incorporated many ingenious devices, including electrification which eliminated all hand labour, the machine starting and stopping itself. New high-speed drills and notchers aided in making markers. The use of the perforated marker increased substantially, particularly in the cotton goods industry. New ticket shading machines assured more perfect shade marking of the component parts of a garment; one of these printed a great variety of information pertaining to the garment and affixed the ticket all in a single operation.

Many new automatic or semiautomatic machines were developed for special operations outside the cutting and sewing rooms. These included tack button, snap fastener, strip cutting and slide fastener attaching machines. Of great importance was a new automatic folding machine which would fold over flat edges on any shape cloth patch at very high speed—thus allowing increased produc-

tion in sewing collars, cuffs, pockets, etc.

Pressing equipment was streamlined and improved. Despite the opposition of old-time pressers, many fingertip control automatic and semiautomatic pressing machines were installed. New electric steam irons and 100% steam irons increased the efficiency of pressing.

One of the greatest timesavers in clothing manufacture was the development of small attachments, usually to sewing machines, permitting the operator to perform two or even three operations previously performed by two or three persons. Here, perhaps, the greatest advances in the industry were made. Automatic thread cutters, edge trimmers, sew-pinkers etc., saved millions of man-hours. One of the most unusual and saving classes of equipment was the S.V. or special variety group of sewing machines.

Production Methods.—No single phase of the industry underwent so great a change as did the methods of production. Only in regular woollen and worsted dress clothing was the old system of bundle manufacturing retained. Other segments of the industry advanced to progressive-bundle, progressive-line and straight-line systems of manufacture. In the straight-line system each operator had only one garment or part of a garment at a time; when the operation was completed, that garment or part of a garment was handed on to the next operator for the next operation. Operations were made as simple as possible. Thus, the cut garment pieces were fed to the operators at various intervals; they performed their respective operations, and a completed garment emerged at the end of the line-not unlike automobile assembly. When properly synchronized, this method of production was highly efficient; it received its impetus from the development of the individually motored safety table which eliminated the old shaft tables. The individual table made for great mobility, since any operator and machine could be moved about the factory freely, with proper electric

In Britain and on the European continent, individual motors and tables were also widely used. European manufacturers, however, paid most attention to the conveyor belt system of production which required subdivision of operations, but instead of the operators handing the garment to each other they put the garment on a moving conveyor belt. Here, even more than in the straight-line system, absolute synchronization of operations was necessary. In both systems of manufacture, great attention had to be given to time and motion study and methods of handling.

Opinion varied as to the best method, depending on such factors as quality and availability of labour, constancy of style of garments, and condition of machinery.

Styles and Fabrics.—Styles changed during the decade, but not radically. Shoulders became not quite so wide, and almost all coats were drape models. No basic changes took place in regular dress clothing. Style was influenced by the great upsurge in sportswear, both spectator and participant; while the sportswear designs were not new, the great demand for them was unprecedented. In Britain, "austerity" clothes symbolized wartime economy, while in the United States numerous restrictions were enforced.

The accent in construction was on simplicity, probably because of the rising costs of material and labour. One-piece collars and cuffs, continuous facings, turned in plackets, centre-arm-split sleeves and other similar methods of construction required less labour.

The most interesting aspect of fabrics as they pertained to clothing was the rise of synthetics. Increased use of rayon, nylon and a host of other man-made fibres started in women's wear, moved to men's sportswear and then was introduced into regular dress clothing. Many of the technical problems raised by the use of synthetics were successfully solved, but a few still remained. Novelty fabrics were made from almost every conceivable material, including seaweed, aluminum, chicken feathers, glass, mink fur and milk; many being practical applications. Basically, however, wool and cotton dominated the industry. Methods and finishes were developed that permitted no shrinking of woollens, rayons and cottons. (See also Fashions, Women's.)

Merchandising Methods and Supply.—Year after year during the decade, the chain stores sold an increasing percentage of clothing. This modern method of merchandising forced various changes in the industry; manufacturers opened their own stores, tied up with certain chains exclusively, amalgamated with other manufacturers and specialized in only one or two items—all to meet competition.

During the years from 1939 to 1946, the clothing industry, like all industries, operated on a wartime basis. Machinery, fabrics, trimmings and supplies of every kind became almost impossible to obtain. Price ceilings were rarely observed in fabric and trimming purchases, thus fostering a black market which extended down to the consumer. Machinery was scarce, as makers converted to precision war work; in addition, there was a scarcity of labour, and resultant high wages. Thread, buttons and pocketing were virtually impossible to get without some form of priority.

The industry nevertheless acquitted itself well during the war. Despite all obstacles and handicaps, and in the face of unprecedented demands, the manufacturers of clothing turned out more and better garments than ever before.

While the war retarded development of new machines and fabrics, it speeded up new fabric finishes and functional dress designs. Members of the armed forces were specialized workers requiring special uniforms to overcome special problems. Newly developed were flameproof, mildew-proof and waterproof finishes. Cold-weather clothing was radically changed by the necessity of flying at great heights in extreme temperatures. Jungle wear presented the very opposite problems. Never was there so much research on clothes—most of it successful. The principle of multiple-layer clothing for cold weather and of porosity for hot weather stemmed directly from this research.

New Factories.-Throughout the world, new factories were erected to produce machine-made clothing in well lighted, healthy surroundings. Large plants were started in South and Central America, South Africa, Britain and Ireland. In Australia there was a concerted effort to move clothing factories away from congested areas. The same tendency was noted in the United States, where decentralization continued with the opening of many modern factories in the south and west. Modern factories were a far cry from the old sweatshop. The new, modern factory was a one-story, fireproof structure, with many windows, fluorescent lighting, rest and comfort rooms, a hospital room and cafeteria. Many plants provided scientificallyplanned music for employees. Increased employee benefits in the form of paid vacations, health and life insurance, sick funds etc., became commonplace. Wages based on incentive work plans became higher, hours of work shorter, skill greater.

In most countries labour was organized; in the United States, the great bulk of clothing workers belonged to the Amalgamated Clothing Workers of America or the United Garment Workers. In Britain and France, the trend

changed from custom-made to mass-produced, machinemade clothes, and skilled labour was in high demand.

The world-wide production of civilian clothing declined precipitously from 1939 to 1946. Huge stocks of uniforms did not offset this decline because of the incredible number of uniforms destroyed in the war. Mills and factories in Asia and Europe were ruined by war; in 1946, only those countries unscarred by the physical impact of shot and shell were able to produce their ten-year average. In the United States, the production of civilian clothing in 1946 surpassed that of any prior year.

Coal

The three major producers of coal—the United States, Germany and Great Britain ordinarily accounted for two-thirds of the world total, and the countries listed in Table I, including all with known outputs more than 5,000,000 tons a year, accounted for about 94% of the total.

World War II brought great increases in the demand for fuel, some of which were met and some not. Sharp increases in output were made in the United States and Germany, but in Great Britain labour shortages brought a decline instead of the desired increase. In general, production suffered in countries that came under German occupation, though there seems to have been some exceptions to this rule; but without exception, the general disorganization that followed the liberation of the occupied areas resulted in marked declines for the time being. Consequently there were many sharp drops in output in 1945, and some as early as 1944. In most cases there was as yet little known about outputs in the occupied areas previous to the German surrender; after the surrender there was a period of some months in which conditions were so disorganized that little could be accomplished, even though the need was great. Even aside from the general confusion, labour and equipment were short, and outputs dropped to a fraction of their normal level. Poland and France were the first countries to overcome these handicaps and get outputs back to normal levels, and good progress was made elsewhere.

While European coal supplies for the winter of 1946 were still inadequate, the situation was much improved over the preceding winter.

United States.—The salient features of the coal industry in the United States during the decade are covered in Table II, while Table III shows production by states.

Because of overexpansion of production capacity and competition from petroleum, natural gas and water power, the coal industry in the United States was not in a favourable position to meet the adverse conditions of the depression years of the early 1930s, and output declined 45% between the peak year of 1926 and the low of 1932. While much of the lost ground had been recovered by 1937, the recession of 1938 pulled production down again almost to the 1932 level, and the 1937 level was not regained until 1940. War demand increased the output steadily up to 1944, with the successive outputs of 1942, 1943 and 1944 each making a new record high. The high of 1944 was 35% greater than the 1939 output, and 27% greater than

that of 1937. Production declined by 8% in 1945, but more from strikes in the industry than from lack of demand. The same situation was repeated in 1946, with strikes in April and May and again in November, causing another 7°_{10} decrease.

The 1946 production of bituminous coal to Dec. 21 was 514,607,000 short tons, as compared with 568,627.ooo tons in the same period of 1945, a decrease of 9.5%. Except during the strikes and vacation periods, production during the year averaged well over 12,000.ooo tons a week, and in six weeks exceeded 13,000,ooo tons, making it evident that an output of 630,000. 000 to 650,000,000 tons was quite possible. In anthracite the results were much better. The terms of settlement of the bituminous strike had been agreed upon just before the time for the renewal of the anthracite contract, so little time was lost, and production to Dec. 21 was 59,488,000 tons, against 54 -152,000 tons in the same period of 1945, an increase of 10%. Total output for the year, including both bituminous and anthracite, was estimated at 588,000,ooo tons, a drop of $7^{o_7}_{10}$ from 1945. As a result of the strikes and the reduced output that followed, coal supplies were short during much of the year, and the postwar readjustment to normal industrial operation was greatly hampered.

Europe.—The effects of war conditions can be traced in the figures of Table I.

Belgium. - The production rate ran a little better than 1,000,000 tons a month in the latter half of 1944 and the first half of 1945,

but with a low of only 190,000 tons in Sept. 1944. Improvement in the latter half of 1945 brought the monthly output up to 1,900,000 tons at the end of the year and 12,413,000 short tons in the first half of 1946-better than three-quarters of the prewar rate of operation.

the first five months, 12% under the 1939 rate. Lignite production was slightly ahead of the 1939 rate, and all of the deficiency was in bituminous coal. From the scanty information, it appeared that production under German occupation was maintained more successfully than elsewhere, as the reported output for 1944 was above the prewar rate.

60,644

63,701

France.-Production sagged to little more than 1,000,000

tons a month in August and Sept. 1944, but later improved steadily. The total for the first six months of 1946 was 30,970,000 short tons—6% better than the 1937 rate, but 4% less than the 1939 rate. The output of March 1946 exceeded the 1939 monthly average.

Germany.—German production, as well as that in the occupied countries, was much disorganized after the surrender, and from the limited information available seems to have sagged in 1943 and 1944. However, too much dependence could not be placed on the drop of output indicated in Table I, as the low figures for 1943 and 1944 were from a different source than those preceding, and might not be directly comparable. Output increased from around 5,500,000 short tons a month in June 1945 to 18,500,000 tons in December; the improvement continued into 1946, with 20,400,000 tons in May and a total of 99,200,000 tons in the first five months.

Netherlands.—Production increased rapidly from 410,000 short tons a month in June 1945 to 687,000 tons in October. Output was irregular in the last quarter of 1945 and the first quarter of 1946, but rose to 840,000 tons in July, with a total of 5,041,000 tons in the seven months.

Poland.—In April 1945 coal production in Poland was little more than 1,000,000 tons a month, but improved rapidly, and had almost reached the prewar level by the end of the year. The total for the first half of 1946 was 23,852,000 short tons—14% above the 1938 rate.

Other Countries.—Coal outputs in countries outside the immediate war zone were in general increased materially above prewar levels. In most cases, maximum outputs were attained in 1942 or 1943, with subsequent declines.

Canada.—Production increased 20% to 1942, and then declined 11% to 1945. In 1946 output recovered much of the previous loss, reaching 12,976,825 short tons in the first three quarters, 9% above the same period of 1945.

India.—The peak output came in 1941, with an increase of 15% over 1937, and 4% over 1939, but the subsequent decline brought the 1945 output back almost to the 1937 level. The total for the first five months of 1946 was 13,132,000 short tons, about on a par with 1939.

South Africa.—The peak output of 1944 was 48% over that of 1937 and 36% over 1939, and the decline to 1945 was only 5%.

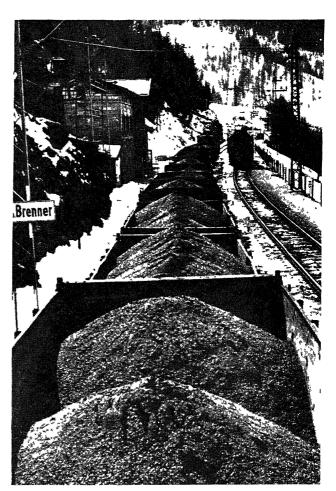

Australia.—Maximum production was reached in 1942, at 28% above 1937 and 15% above 1939, with a 14% decline to 1945. (See also Fuel Briquettes.) (G. A. Ro.)

Great Britain.—During the years 1937 to 1946, the output of coal from mines in Great Britain declined by about 60,000,000 tons, or more than 25%, and the cost to the consumer increased by more than 100%. This state of affairs was likely to have a serious effect on the country's industrial recovery and it was hoped that the National Coal board would revitalize the industry and bring about a better understanding between officials and workmen.

Table IV.—British Coal-mining Industry, 1936 and 1946

	1936	1946
Ownership of coal	Private	State
Ownership of collieries	Private	Private
Annual output (million short tons)	250	192 (approx.)
Number of persons employed	752,000	680,000 (approx.) under 20 cwt.
Output per day per person employed	23.5 cwt. 10s.	under 20 cwt.
Average daily wage	53%	75 <i>%</i>
Output carried by conveyors.	48%	70%
Average selling price at pithead	14s. 7d.	-

In 1938, the coal commission, consisting of five commissioners nominated by the ministry of mines, was set up to unify all the coal royalties. The capital value of the royalties was assessed by a tribunal at £66,500,000; this sum was divided among the coal-mining regions by a central valua-

German coal cars entering Italy through the Brenner pass in 1940. The British sea blockade forced Mussolini to rely on Germany as almost his sole source of coal supplies

tion board. The regional boards divided up their allotted sum and the whole was vested in the coal commission on July 1, 1942. This completed the first half of the commission's duties; the second, namely the amalgamation of individual collieries into economic units, had to be abandoned at the express wish of the minister of fuel and power in 1944.

Nationalization of the coal mines had been the political ambition of the Labour party for more than 20 years. When the party came into power in 1945 with an overwhelming majority in the house of commons, a bill to nationalize the coal mines and certain ancillary undertakings was drafted, and all coal mines were to be vested in the state. It was clearly established that the industry would not be controlled directly by the minister of fuel and power but through a Coal board appointed by him. The function of the board was to produce an adequate quantity of coal at a reasonable price without undue risk to the health and safety of the workmen, and to provide the miners with a sufficient and regular wage to ensure a fair standard of living. It remained to be seen how far the board could fulfil these functions.

Output.—Prior to the outbreak of World War II in 1939 the annual output remained (with minor fluctuations) about 230,000,000 tons, which was sufficient to meet home demands and such exports as could be sold in the face of competition. There was some unemployment among the miners, especially at the house-coal collieries in the summer, and there was a floating population of partially-

"Sticking It Out" by Werner of The Chicago Sun describes the strike deadlock of May 1946 between John L. Lewis and soft coal operators over the issue of a health and welfare fund for miners. Shrunken coal supplies threatened to paralyze U.S. industry, transport and commerce

employed men that could be drawn upon to meet an unusual demand for coal. By a judicious combination of working days and unemployment pay, a miner's family was able to live comfortably but not lavishly. With the outbreak of war, miners flocked to the fighting forces, especially after the collapse of France. The services had always had an attraction for the best type of young miner, and the result was that many older men had to continue at work; many of the less physically strong were forced to take a day off each week, and the less estimable type, found in every industry and walk of life, exploited the prevailing high wages by increasing absenteeism. In spite of increasing mechanization the annual output and the output per manshift steadily declined during the war years and in 1946 had reached a dangerously low level.

The daily coal output per person remained steady at 23 cwt. in 1939, but declined during World War II. Various reasons were advanced for this decline, such as the increasing age of the coal-face worker, lack of sufficient food, war weariness, etc. These possible causes were balanced by increased mechanization and labour-saving devices. Other suggestions were that the average miner, having earned sufficient to provide for his family during the current week, saw no point in working longer, for if he earned more than a certain minimum the government would claim it in "Pay as you earn" income tax. The payment of direct taxation like income tax was anathema to the miner. Nevertheless, whatever the reason for the 1946 figure, the daily output of under 20 cwt. per person employed had to be raised to a figure comparable with that of continental countries, that is, at least 30 cwt., if the coal industry were to prosper. A reduction of manpower would have to be accepted, wages would have to be increased and conditions improved.

Employment and Wages.—Before World War II, the number of persons employed in the coal-mining industry remained relatively constant at 760,000, but after 1939 it began to decline. There was naturally a big fall caused by the call up of the territorial army and reservists and to voluntary enlistment in 1939. After 1941, the number employed slowly declined, despite artificial "boosts" such as the posting of boys (Bevin boys) to the mines instead of to the forces. In fact, the normal decrease caused by age, illness, accident, etc., was greater than the intake. For many years, coal mining as a means of livelihood had received such bad propaganda that boys were averse to entering it.

The average daily wage showed a slow but steady increase before World War II, rapidly soaring after 1940. The miner, especially the day-wage man or boy, was paid a relatively low wage in 1939.

Shortly after the outbreak of war, it was agreed between the owners and miners that increases in wages to cover the increased cost of living should take the form of uniform flat-rate additions, but that the district variation in wages should continue. After the introduction of the Essential Works order in May 1941, the miners' leaders demanded the establishment of a national board to deal with and decide district questions and an increase in wages. The government refused to entertain the idea of a national board and referred the wages demand to a joint standing consultative committee which had been formed in 1936 and had functioned with increasing success for this very purpose.

The owners refused the proposal for a £4 a week minimum wage but granted a flat-rate increase of 1s. a day to adults and 6d. a day to other workers on the condition of absolute regularity of attendance. In Aug. 1941 this condition was withdrawn, and the advance became a flat-rate advance in wages. The year 1942 was a period of unrest, and strikes were all too prevalent. In June 1942 the Greene Board of Investigation was set up by the government; this board awarded an unconditional flat-rate advance of 2s. 6d. to adult workers and pro rata advances to juniors. It also awarded a national minimum weekly wage of 83s. for all underground workers more than 21 and 78s. for surface workers, these figures to be reduced to terms of shifts worked. Subsequent to this award, a joint national negotiating committee was proposed and accepted, with a national reference tribunal, under the chairmanship of Lord Porter, in case of dispute. At the end of the year the Miners' federation appealed to the Porter tribunal and were awarded £5 a week minimum wage for underground adult workers and gos. for surfaceworkers, with corresponding increases for juveniles. This award did not sufficiently differentiate between skilled and unskilled men. In April 1944 a new wages agreement was concluded which contained two important clauses: first, it could not be terminated until June 30, 1948, and secondly, there were to be no more demands for a wage increase.

Table V.—Wages and Wage-earners in the British Coal-mining Industry, 1938 and 1945

1938																	Wage Earners	Total Wages
10/6	•																	£107,000,000
1745	•	•	•	٠	٠	•	٠	٠	•	٠	٠	٠	•	٠	•	٠	700,000	£200,000,000

Many districts or mines could not afford these increases in wages, and the coal charges order came into being to make the increase possible. A levy which began at 5s. and was later increased to 12s. a ton was made on every ton of coal, and subsidies were paid to high-cost mines to cover the wages increase and guarantee a profit of 1s. 4d. a ton.

Mine Improvement.—From 1931 onward there had been a rapid increase in the use of coal cutters and underground conveyors. At first this resulted in a steady increase per man-shift, but after a time a saturation point appeared to have been reached.

In many mines and many seams of coal, the use of machinery resulted in an increase of output with less labour, but it appeared that machinery produced no benefit in some cases.

The most important technical document issued by the government during the war years was the Reid report. This was by far the most outspoken report ever publicly signed by mining engineers and it rightly received careful attention. At the same time many engineers did not agree with some of its findings.

(J. A. S. R.)

Coast and Geodetic Survey, U.S.

The year 1937 marked the beginning of a decade of exceptional achievement in surveying and charting. More than a century before, the United States congress had charged the coast and geodetic survey with the duty of surveying the coast. These functions were later extended to cover the determination of geographic positions and bench mark elevations from coast to coast to provide the basic control for mapping and engineering planning; the prediction of tides and currents; the observation of the earth's magnetism and the recording of its fluctuations; the study of earthquakes; and in 1926 the compilation of aeronautical charts to meet the needs of pilots of aircraft.

In 1937 the first series of sectional air navigation maps were completed; the first nine-lens aerial camera was constructed and used in flights for aerial-topographic mapping in areas difficult of access. The large area covered by a single exposure, 35 inches square giving excellent detailed view of the ground, gave promise of reduction in the cost of topographic work and ground control for accurate mapping. Automatic sea buoys replaced station ships previously required for radio acoustic ranging, a method of accurately locating a survey ship engaged in offshore hydrography. For the first time, tidal observations were observed at sea 27 miles from shore by means of the Dorsey fathometer, an improved type of echo-sounding instrument developed by the bureau. A crystal chronometer was adopted and used for gravity at sea observations and proved its value on land observations in eliminating time errors.

In the next two years, 1938-39, an increasing need for survey data was caused by activities of other agencies, engineers and navigators. The rapidly rising demand for the products of the bureau was met, without reducing its high standard of precision, by progressively improved methods and appliances. A new series of direction finding aeronautical charts was initiated. A comparison with chart issues of ten years previous showed for these years an increase in orders of 150% and 180% respectively.

In 1940 priority was given to co-operative projects with federal, state and public agencies and on the requirements of the U.S. army and navy in connection with the national defense.

Important projects were the establishment of precise fire control azimuth stations near coastal fortifications, and the analyses of tidal phenomena of various foreign waters to prepare predictions independent of foreign exchange agreements. Special air maps were prepared for civil pilot training. Marine and air chart issues were 25% over previous years. The records of the major earthquake shock in the Imperial valley, Calif., on May 18, 1940, furnished additions to earthquake data. Construction was com-

pleted of the most modern survey ship, the "Explorer," and the "E. Lester Jones," both of which engaged in surveys in Alaskan waters.

To meet emergency needs, survey expeditions were dispatched in four ships to Mayaguana, Trinidad, Antigua and Jamaica islands in the Caribbean, and surveys were accomplished within four months in connection with the establishment of these army and navy island bases for U.S. defense purposes.

The rapid extension of land, sea and air forces in 1941 taxed the resources of the bureau to meet surveys requested for naval operations, pilot training courses and general air navigation. There was a three-fold increase over normal issues of nautical and aeronautical charts. The year was marked by the successful use of several newly developed surveying devices, of which the most important were the Dorsey fathometer number 3 and the automatic depth recorder; a new portable tide gauge; a thermostat control for gravity, pendulum apparatus and a transit micrometer attachment.

A program of scientific co-operation with various American republics was inaugurated, initiated by tidal measurements in eight countries—Mexico, Costa Rica, Colombia, Ecuador, Peru, Chile, El Salvador and Venezuela—and a comprehensive series of gravity observations in Peru and Colombia.

The first full year of U.S. participation in World War II, 1942, was marked by the complete interruption of normal activities to utilize the personnel and facilities of the coast and geodetic survey exclusively to provide surveys required in the prosecution of the war.

Hydrographic surveys were made of designated coastal waters in advance of their use by ships of the navy for anchorage of patrol and escort ships. More than 50 unknown submerged reefs were located and charted. Along the Alaska coast, channels were surveyed across the foul areas to shorten routes and to permit passage of naval vessels inshore from possible submarine operations without danger of grounding on uncharted obstructions.

Ocean tides, tidal currents and geomagnetic observations were investigated in widely distributed localities. Results of these observations provided navigators with vital information. Magnetic observations made at selected bases furnished data on vertical intensity for purposes connected with magnetic mine defenses of coastal areas and for de-gaussing vessels. Records for seismographs were studied to furnish data on the nature of earth shocks and to advise in regard to proposed construction of war plants in regions subject to earthquakes. The nine-lens aerial camera was utilized extensively in Alaska. Production of charts was about seven times the normal issue. For purposes of security, they were placed on a confidential basis, and not made available to the public. The aeronautical charting program was expanded and extended to cover world areas to provide air maps of the best available information under the standards set for the U.S. series of aeronautical charts. The services of the commissioned officers of the coast and geodetic survey were in demand for special assignment with the armed forces because of their specialized training and experience. About 40% of the officers of the bureau were on duty with the army, navy and marine corps at the close of 1942.

The principal accomplishments of the survey in 1943 were the surveying and charting of waters of the western Aleutian Islands and the execution of geodetic control in Alaskan and Yukon territories. Four ships of the survey

fleet were operating to meet the immediate needs of the Alaska military sector command, and one vessel was assigned directly to the command of the North Pacific naval force. The work performed by the personnel of these survey ships contributed to the success of naval missions and to the transportation of military personnel, supplies and equipment in these previously uncharted waters. A fifth survey vessel was engaged in southeast Alaska surveying approaches to the Sitka base.

The Bristol bay coast of the Alaska peninsula was photographed and mapped by the excellent co-operation of the U.S. coast guard which furnished an amphibious plane and crew to fly the nine-lens aerial camera. Unfortunately during an aerial photographic mission to the western Aleutians, the plane crashed into Adak mountain and was destroyed. The accident, in which all of the party except two were killed, occurred shortly prior to the attack on Kiska Island, when survey work was being concentrated for that action.

Geodetic control surveys were made along the shores of Bering sea from the Yukon river valley to Seward peninsula, and through British Columbia and Yukon territory, from the summit of White pass to Tanana crossing. The work included triangulation, levelling and astronomic observations of first-order positions.

From an analysis of geomagnetic observations, isogonic lines were determined, or extrapolated from all available information, for use on air maps of the entire hemisphere. Naval operations and marine concentrations in U.S. coastal waters required the issue to navigators of 2,250,000 marine charts. Training programs and operations of the U.S. air forces and related aviation activities were reflected in the issue of 15,000,000 aeronautical charts.

In 1944, the coast and geodetic survey issued 10,000,000 charts to supply the constantly increasing demands for marine and air maps by the navy, merchant marine and air forces. In preparation for the invasion of the Philippines, the entire series of nautical charts of these islands were reprinted. The coast and geodetic survey had initiated surveys in the Philippine Islands in 1901, and there were available complete records of the shores of these islands for assault and landing purposes. This information was more accurate than that gathered for any other Pacific campaign. Surveys in the Aleutian Islands were executed by five survey vessels. A major geodetic project for establishing a continuous arc of triangulation from the U.S. through Canada to northwesternmost Alaska was completed. Geodetic control stations were established on Cape Prince of Wales, on Little Diomede and King islands in Bering sea. Extensions were made from this main aic to Kotzebue sound and along the coast of Norton sound to Nome, Alsk. On the south side of the Alaska peninsula, a triangulation connection was made to carry the standard geodetic datum throughout the Aleutian Islands.

Geomagnetic observations were made at five observatories and by five mobile units in Hawaii, Puerto Rico, Alaska and the United States. These observations provided useful data on the approach of magnetic storms for redirecting radio communications. The bureau published a new manual on hydrographic surveys and a glossary of geographic names of Alaska and Puerto Rico.

Under plans for providing complete surveys of the outermost Aleutian Islands and of the Maine coastal waters, 12 survey ships were engaged in 1945. A survey expedition provided essential vital information for naval activities along the Arctic coast east of Point Barrow. Isogonic

charts were published for army and navy flycis over world routes. In the earthquake regions of western U.S. 60 strong motion instruments were maintained, and studies of the vibrations in buildings and foundations were made to permit further progress in engineering seismology. There were 3,500,000 marine charts and 6,000,000 air maps issued. Geodetic operations reflected the shift from war requirements to preparation for postwar developments. In the Columbia and Missouri river basins, control surveys were executed for other federal agencies prior to investigations for flood control, reclamation and recreation water uses.

In 1946, the long-range program of surveys of the coast was resumed, and geodetic control surveys for river improvement projects and mapping in several states were extended. Airport surveys and flight charts were published and improvements printed in nautical charts. After thorough tests in Alaskan waters, the use of Shoran (see Radar) was proved to be of great value for hydrographic surveys. The radio ranger was used for the first time in offshore surveys along the New England coast.

A review of the first postwar year indicated an increased effectiveness in operations by virtue of the development of many special devices during the preceding decade. Success had been achieved in adopting electronic, acoustic and magnetic techniques developed during World War II. (See also Cartography; Geography.)

(L. O. C.)

Coast Guard, U.S.

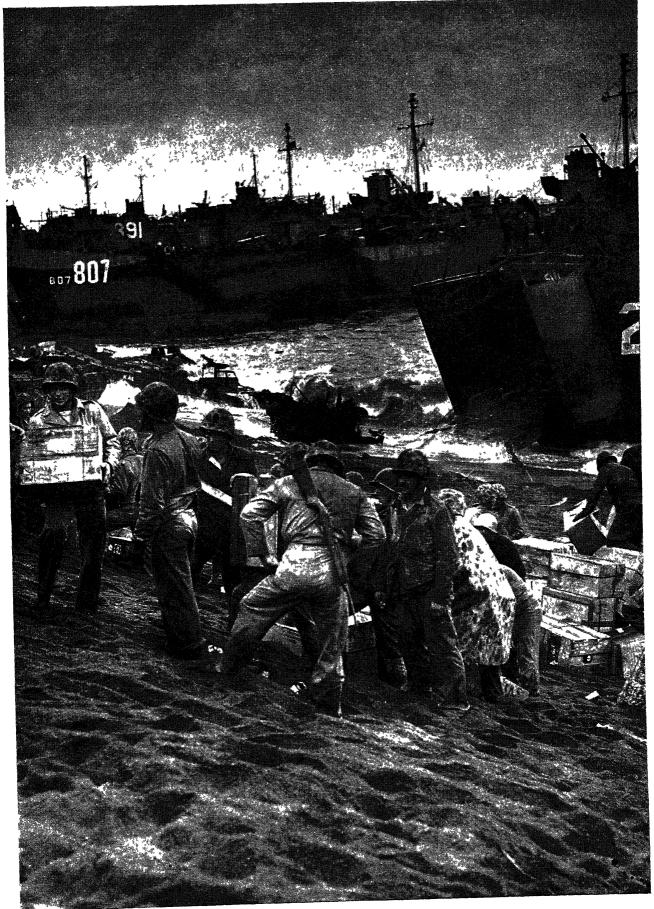

Represented during World War II on the staffs of U.S. fleet commanders as task force commanders, flotilla commanders of landing craft, convoy escort commanders, beachmasters in combat landing areas and various other capacities, the coast guard built a military organization which participated in every important campaign undertaken by the United States during the war.

In collaboration with other departments of the government, the coast guard also continued its primary peace time duties of enforcing customs, navigation, motorboat and all federal laws on the high seas and in navigable waters within its jurisdiction. Activities in prevention and detection of smuggling liquor and narcotics extended to Hawaii, Puerto Rico and the Virgin Islands, with the ninc coast guard air stations used to locate smuggling vessels, planes and illicit stills, report on obstructions to navigation, and conduct flood rescue operations.

Dramatic events in the line of duty during the decade 1937–46 were routine. The cutter "Shoshone," on a regular line island cruise in 1937, serviced Howland Island for Amelia Earhart's ill-fated flight; the coast guard patrolled 1egattas and marine parades and furnished facilities for a floating court in Alaska.

One of the major activities concerned aid to stricken areas in times of flood, hurricane and severe weather. Such aid in 1937 included assistance in the Ohio-Mississippi flood and aid to marine commerce during the season of heavy weather on the North Atlantic coast.

Federal rules and regulations promulgated by the secretary of commerce regarding the anchorage and movement of vessels, and loading and unloading of vessels with explosives and other dangerous cargoes, were carefully enforced through the various captains of the port offices. The number of captains of the port and their duties increased.

Two coast guard cutters and an oceanographic vessel were assigned to the International Service of Ice Observation and Ice Patrol in the North Atlantic during the 1937 season. The cutters afforded protection and ice warning to transatlantic shipping, and the oceanographic vessel carried out a program of observations dealing primarily with direction, rate and flow of ice-bearing currents. Regular annual patrols operated in the North Pacific ocean, southeastern Alaskan waters and in the Bering sea. The Bering sea patrol, over a long period of years, observed Japanese activity in that area, and the strategic importance of Alaskan shore establishments and control of Alaskan waters in national defense became an urgent need.

The transfer of the bureau of lighthouses and all of its functions from the department of commerce to the coast guard on July 1, 1939, brought with it more than 5,000 personnel and new administrative duties.

Enlisted men continued to study at the various resident schools within the service, and officer candidates received instruction at the Coast Guard academy, a military collegiate institution conducted by the treasury department at New London, Conn. Certified and classed among the upper 10% of the technical colleges of the United States, its graduates are on the same footing as graduates of an accredited civilian university, and the academy confers a bachelor of science degree upon graduation. Its candidates, unmarried and between the ages of 17 and 22, are selected by competitive examinations and are commissioned ensigns in the coast guard. Practice cruises are made from the academy each summer calling at U.S. and foreign ports.

U.S. coast guard tenders patrolled navigation channels to keep them open and safe for traffic during World War II. Below, a guardsman is shown working to free an ice-encrusted buoy while a crew member pelts it with a stream of boiling water

Scientific research during the decade included experimental work in radio engineering and communications, the rewinding machine of the Lyle gun, a marine gasoline engine, a diesel auxiliary engine, lubricating oil research and constant effort to improve lifesaving equipment and methods.

Coast guard officers continued to serve on national and international conferences concerning safety of life at sea, whaling, radio engineering, broadcasting, telecommunications, radio experts for aeronautics and on federal marine casualty boards. These conferences were held in the United States, Sweden, England, Cairo, Norway, Switzerland and Poland.

A national defense appropriation of \$10,700,000 for the coast guard marked its 150th anniversary in 1940. This provided emergency conversion of coast guard vessels for naval use and additional personnel.

With the outbreak of European hostilities in 1939, the United States organized the coast neutrality patrol, carried out largely by the coast guard with aircraft, vessels and coastal stations. The coast guard's performance of this duty was more efficient because of the civil nature of its duties.

The coast guard auxiliary, created by congress to educate yachtsmen and other small boat operators in the proper handling of their craft, proved to be a distinct contribution to safety of life at sea, competency in boat operation and safe navigation among vessels of all sizes upon navigable waters of the United States. The volunteer port security force, organized in 1942 in cities where there were maritime shipping facilities engaged in the transportation of the nation's vital war materials, assumed duties at docks and piers, standing regular watches, examining passes and permits and preventing passage of all unauthorized persons, maintaining constant watch for fire and enforcing all regulations.

Women were accepted but not to exceed 10% of the regimental force.

By 1940, nazi activity in the Greenland area was a twofold threat to U.S. security. German submarine "wolf packs" operated in Greenland waters to destroy all Allied shipping and to establish weather stations and bases for aircraft. The second threat was that the Germans might use Greenland, only six flying hours from New York, as a springboard to attack the western hemisphere.

The south Greenland patrol, established in June 1941 following the signing of an agreement relating to the defense of Greenland by the United States and Denmark in April, and the northeast Greenland patrol, established on July 1, had as their objectives the supply of bases and combat of nazi submarine action and other forms of axis activities in that area.

Another indication of increasing national defense activity was the increase in aids to navigation in 1940 and 1941, including the marking of foreign waters adjacent to newly acquired bases. In addition, establishment of the Atlantic weather patrol in Feb. 1940 placed two coast guard cutters equipped as floating weather stations between the Azores and Bermuda to collect and transmit data.

Coast guard aviation activities quickened pace in 1941, and planes engaged in antisubmarine patrol and convoy and escort duty. The coast guard established additional ship position offices at New Orleans, La., San Francisco, Calif., Seattle, Wash., Ketchikan, Alaska, and Honolulu, T.H., in 1941 to assure prompt assistance in the event of casualty to aircraft engaged in transoceanic and coastwise flights.

On Sept. 12, 1941, the coast guard cutter "Northland" captured the sealer "Buskoe," a Norwegian trawler under German operation. This led to the capture and destruction of a nazi radio station in Greenland. The "Buskoe" was the first axis ship captured by the United States in World War II.

Not unexpected was the transfer of the U.S. coast guard from the treasury department to the navy department by an executive order on Nov. 1, 1941.

When the Japanese planes attacked Pearl Harbor on Dec. 7, 1941, the coast guard cutter "Taney's" screen of anti-aircraft fire prevented the raiding planes from destroying the Honolulu power plant. Thus, the close of the year brought the coast guard well along its way toward being the fourth arm of the U.S. fighting forces.

Buoy tenders of the coast guard laid antisubmarine mine fields in 1942; and the chain of lifeboats, lights, lookout stations and greatly strengthened beach patrols, kept the coasts of the United States under a constant watch.

March 1942 brought the bureau of marine inspection and navigation into the coast guard, and, by an executive order, the authority and responsibility for the inspection and licensing of U.S. merchant ships and seamen rested upon the commandant of the coast guard. On June 1, 1942, the commandant created the Merchant Marine council to make studies and recommendations for the efficiency and welfare of merchant seamen and for the efficiency of safety appliances and equipment aboard merchant vessels.

In June 1942 a coast guard patrolman played a vital part in the capture of four nazi agents landed on the beach at Amagansett, Long Island. Information uncovered by the FBI indicated that Germany proposed to send a series of organized groups of saboteur agents to initiate a wave of terror within the United States. This information led to the establishment of organized beach patrol in July 1942. Primarily a security force, it was designed to protect U.S. shores against sabotage, axis submarines and landings, and "fifth column" activities along the coast. All patrols dovetailed with the regular army and navy defense forces and the FBI, with the coast guard acting in the capacity of a reporting agency.

In July 1942 the cutters "Foremost" and "McLane" sank Japanese submarines in Alaskan waters. And it was on July 4, 1942, that the Elizabeth City air station's special "provision bomb" was put to use in the rescue of the survivors of the S.S. "Everalda," a Latvian ship sunk by submarine shellfire off the coast of North Carolina. Developed by coast guardsmen, this "bomb" was a watertight container with about 20 lb. of provisions in it. Weighing about 22 lb., it contained rations, 7 cans of water, medicine, 1 pint of rye whiskey, a can opener, adhesive tape, salves for burns, cigarettes and matches.

Large coast guard cutters and patrol boats were on duty with the fleet in 1942, the naval sea frontier, and naval task forces convoying merchantmen and troop ships, battling submarines and patrolling sea lanes. The cutter "Hamilton," torpedoed in Icelandic waters, was the first coast guard vessel lost in the war. The cutter "Acacia" was lost by enemy action in the Caribbean, the cutters "Muskegat" and "Natsek" disappeared on North Atlantic stations.

Ten coastal districts maintained a beach patrol organization which, at the peak of its operation, employed approximately 24,000 officers and men, coverage totalled about 3,700 mi., exclusive of areas covered by strategically located lookout towers. By boat, jeep, truck, on foot and on horseback, coast guardsmen tirelessly patrolled the coasts from Maine to Florida, from Key West to Corpus

Christi and from southern California to the Vancouver sound.

In May 1943 the coast guard participated in the development and establishment of a seven unit Loran chain (see Radar) in the Atlantic. At the request of the chief of naval operations, the commandant, U.S.C.G., detailed a high ranking officer possessing radio and electronic experience for special duty with his staff. Later, complete responsibility for operation and maintenance of several stations were turned over to the coast guard.

Adm. Russell R. Waesche, commandant of the coast guard, made a 28,500-mi. tour of Pacific installations in 1943. Conferences held with Gen. Douglas MacArthur, Adm. Chester Nimitz, Adm. William F. Halsey, Jr., and Vice-Adm. Arthur S. Carpenter resulted in the establishment in the far Pacific area of merchant marine hearing units, similar to those already operating in England and North Africa.

Late in 1943 the British admiralty requested that the coast guard train 18 of their officers and 44 enlisted men at Floyd Bennett field in Brooklyn, N.Y., as helicopter pilots and mechanics, the British furnishing 8 helicopters. Mexican officers trained in antisubmarine warfare at the St. Petersburg, Fla., air station.

* * *

The coast guard passed another important milestone on Feb. 22, 1944, when the search and rescue agency was established at the request of the joint chiefs of staff, with its administrative affairs headed by the commandant of the U.S. coast guard. Its advisory board, consisting of representatives from the army services, the army air forces, the marine corps, the navy and the coast guard, engaged in studying and testing various devices, processes and techniques of air-sea rescue. The coast guard districts became coastal operational units under immediate direction of their own air stations.

Operational integration with the navy, with its increased demands for manpower, brought the personnel complement of the coast guard from 10,544 in 1937 to an unprecedented peak of 171,749 on Feb. 29, 1944, excluding the temporary reserve, medical and dental officers and nurses.

In June 1944 Gen. Dwight D. Eisenhower asked for a high-ranking officer, thoroughly familiar with merchant marine problems. The chief of the merchant marine inspection division of the coast guard was selected and left for England late in June to become a member of Gen. Eisenhower's staff at a time when the invasion of Europe on the French coast was giving rise to many problems involving thousands of merchant ships and seamen.

The coast guard serviced the Greenland weather stations which helped to establish the exact date of D-day.

The need alleviated, the beach patrol organizations as such and the activities involving the use of dogs and horses on the Atlantic and Gulf coasts, ceased operations in July 1944 and the revamped coastal lookout system took its place in meeting the needs of a limited coastal defense.

An impending disaster on the home front claimed concentrated action by the coast guard in the spring of 1945 as three successive floods inundated the Ohio-Mississippi valley. A coast guard task force and aircraft, including a helicopter, effected the rescue of more than 10,000 persons and evacuated thousands of heads of cattle.

At the same time coast guardsmen were participating in every important landing in every theatre of war. Among

warborn activities in 1945 were the transportation of Australian troops on the east coast of Borneo in Balikpapan and in Brunei bay, Sarawak, in 1945.

Upon acceptance by the United States and the Allies of the Japanese surrender, in Aug. 1945 the coast guard was the first of the services to complete demobilization plans. On June 30, 1945, separation centres were established at the most advantageous point in each of the coast guard districts in the United States, with an organization trained not only in procedures attending separations but also to provide dischargees with all pertinent information.

Important in postwar operations was the application of scientific advancement of radio and radar to operation of aids to navigation and improvement of navigational methods. Seventeen mobile Loran stations throughout the Atlantic and Pacific areas operated 40-odd Racon stations on the Atlantic and Pacific coasts and in Hawaii and Alaska. At the end of the war there were more than 40 permanent Loran installations. War aids to navigation were removed, but more than 36,000 aids to navigation for peacetime purposes were maintained; lightships not used in World War II took up positions. Many coast guard-manned army and navy vessels were decommissioned.

Maintenance by the coast guard of its air power continued, as did the administration of marine inspection and navigation laws.

The close of 1945 terminated port security activities, and an executive order, dated Dec. 28, 1945, returned the coast guard to the treasury department as of Jan. 1, 1946. Following a brief interim period after Adm. Russell R. Waesche, the wartime commandant, retired because of failing health, Adm. Joseph F. Farley took the oath of office as commandant in Feb. 1946.

Among the important developments of 1946 was the recommendation made to the Provisional International Civil Aviation organization conference held in Paris, France, in April 1946 that the establishment of internationally accepted markings for special search and rescue craft be studied, and that such craft, so marked, be accorded unrestricted rights of entry into the territories of the member countries for search and rescue purposes.

Important in the efficient functioning of the search and rescue task unit, was the transfer to the coast guard of the naval air station at Cape May, N.J., together with certain surplus property. At a somewhat later date a helicopter training program was carried out by the coast guard for navy pilots.

On May 16, 1946, the coast guard took custody of the buildings and grounds of the naval auxiliary air station, Mayport, Fla. Mayport replaced Curtis Bay training station as the east coast training station of the coast guard.

When President Truman's Reorganization Plan Number Three went into effect on July 15, 1946, all functions and persons of the former bureau of marine inspection and navigation were transferred into the permanent coast guard organization. On July 1, 1946, the strength of the coast guard was 22,500 enlisted men and 3,200 officers, including officers assigned to merchant marine inspection duties.

The ten years ending in 1946 proved the versatility of the coast guard's added new powers of achievement. Many times coast guardsmen proved their philosophy, "You have to go out, but you don't have to come back" in their service around the world and at home.

(R. R. W.)

Women's Reserve.—On Nov. 23, 1942, the women's reserve of the U.S. coast guard reserve was authorized by

public law 773, 77th congress, 2nd session, in order to furnish the U.S. coast guard with additional personnel. The war emergency had placed unprecedented demands upon the coast guard, as upon the other three armed services. Suddenly it was called upon to multiply its personnel some 16 times, from 15,000 enlisted men and 1,000 officers to 170,000 enlisted personnel and 10,000 officers. The SPARS, as the new reserve was named from the first letters of the coast guard motto, Semper Paratus—Always Ready—quickly became an integral part of the wartime organization.

The integration of women into a military service in the shortest possible time was not without its difficulties. The fact that legislation had been enacted enabling the coast guard to enlist women and that the ranking officers of the service saw the necessity for using the skills and talents of women to accomplish the tasks assigned the coast guard, did not guarantee the wholehearted acceptance of the innovation on the part of all of the men of the service. The primary mission of the first women who entered the coast guard was to prove to the officers and men with whom they were associated that they could do their jobs not only efficiently but without disrupting military habits and customs.

The success of the first women assigned to duty stations had a most auspicious effect upon the subsequent use of women. Whereas officers of the coast guard first estimated that they could use 3,000 enlisted women and 300 officers effectively in their organization, they eventually found that they could, and did, use 10,000 enlisted women and 1,000 officers. As the SPARS demonstrated that they could do the jobs assigned them, the number and variety of jobs they were called upon to do expanded rapidly. By war's end enlisted SPARS were serving in 30 different ratings and accounted for 1 out of every 17 enlisted persons in the service. SPAR officers, who numbered 1 in every 10 officers, were serving in a great variety of administrative jobs. The ratio of women to men was higher in the coast guard than in any of the other services.

The greatest numbers of enlisted women were used in yeoman and storekeeper ratings which made use of their civilian skills as secretaries, typists, stenographers and bookkeepers. Large numbers, however, were trained as radiomen and served with distinction in the communications service. Others served as pharmacists' mates, cooks, bakers, printers, instructors, switchboard operators, drivers of motor vehicles, parachute riggers, air control tower operators, chaplains' assistants, sound motion picture technicians and in numerous other specialist ratings.

Over one-half of the SPAR officers served in a variety of office administrative positions, while the remainder was divided between communications and pay and supply. Long before V-J day all coast guard coding boards in the continental United States were manned entirely by SPAR communications officers, and many pay and supply units were handled almost entirely by women. Most SPARS, both enlisted women and officers, were assigned to duty at U.S.C.G. district offices, although some were assigned to smaller outlying units.

All enlisted personnel, except those trained in the beginning of the program at naval facilities, were given recruit training at the U.S.C.G. training station, Palm Beach, Fla. Specialist training for yeomen, storekeepers and cooks and bakers, as well as pay and supply training for officers, was also conducted at this station. Other specialists were trained at various coast guard or naval facilities depending upon the facilities available. All general duty officers were indoctrinated at the U.S.C.G. academy, New London, Conn., and communications officers were

given further training in their specialty at the naval training school, communications-(W), South Hadley, Mass., or at U.S.C.G. training station, Atlantic City, N.J.

Capt. Dorothy C. Stratton, professor of psychology and dean of women of Purdue university, Lafayette, Ind., was named director of the women's reserve of the U.S. coast guard immediately upon the passage of enabling legislation creating the new organization. She served throughout the wartime life of the reserve. In Jan. 1946 Capt. Helen B. Schleman, who had served as assistant director from the beginning, was named director and served as such until demobilization was completed on June 30, 1946.

As women in the women's army corps and the naval reserve demonstrated that they could successfully carry out the duties assigned them, congress liberalized in a number of ways the legislation under which the women's reserve operated. The SPARS, along with the other reserves, benefited from the new legislation. For example, restrictions on commissions for women officers were modified. The SPARS were allowed one captain and all restrictions on ranks below that of captain were removed. Assignment to duty in Alaska and Hawaii was permitted, benefits were liberalized and made the same as for the male military personnel.

The new reserve, although drawing fire from the public on a number of scores, was able to avoid criticisms in certain areas. The fact that women officers and enlisted women wore the same basic uniform elicited rather general approval, as did the provision of adequate and reasonably attractive barracks for the women.

Anticipated discipline problems largely failed to materialize. The fact that all members of the women's reserve were volunteers and that the minimum age limit was 20 no doubt contributed to keeping disciplinary problems to the minimum.

The most important factor was undoubtedly the strong desire of the members of the women's reserve to make (D. C. SN.) good in the service.

Cobalt

World production of cobalt was of the order of 4,000 short tons annually prior to World War II, distributed approximately as follows: Belgian Congo 40%, Northern Rhodesia 30%, French Morocco 20%, Burma and Canada each 5%, with a few odd tons from other countries. During the war years output declined in most countries except the Congo; known production averaged some 3,500 tons, but may have been larger as complete data were still lacking at the end of 1946. The U.S. had no prewar production but developed a small war industry, increasing from 64 tons in 1940 to 382 tons in 1943, and an estimated 575 tons in 1945, mostly from Cornwall, Pa., Fredericktown, Mo., with small amounts from Idaho.

Two-thirds of the world's wartime production of cobalt was absorbed by the U.S., with imports ranging from 2,000 to 3,000 tons a year.

Consumption shifted radically after the cessation of hostilities, as is indicated by the following quarterly totals of approximate uses of different kinds, in short tons:

			19	45		19	46
	1944 average	I	II T	III	IV	I	11,
Metallic uses Salts and driers Nonmetallic uses	475 82 23	575 98 22	568 98 34	342 79 38	233 83 51	231 103 68	279 132 76
Total	580	695	700	459	367	402	487

Metal consumption was mainly in cobalt alloys and alloy steels, in approximately the following proportions: stellite and carbide-type alloys 50%, magnet steels 30%, high speed steels 10%, other uses 10%. All of these uses contributed largely to the war program. Nonmetallic uses were largely in fruits and pigments. Though the wartime supplies were never abundant, that they were adequate was evidenced by stock accumulations of some 3,700 tons; it must be remembered, though, that war stocks were accumulated not from surplus output, but by stringent economy in essential uses and curtailment of nonessential uses.

Production in the U.S. dropped with the cessation of hostilities, but consumption increased to 1,398 tons in the first half of 1946.

Cocoa

The United States consumption of cocoa (cacao), from which chocolate products are made, increased steadily from 1900 up to 1936. Production in both South America and Africa overtook demand, and the market dropped in 1937 to such low levels that a movement was started by producers to withhold supplies from the market until prices improved. Consumption increased in other countries, but imports into the U.S. continued lower than the record of 1936, 682,947,000 lb., until 1941. World production of cocoa increased eight times between 1900 and 1939. South American countries-Ecuador, Brazil, Costa Rica, the Dominican Republic, Panama and Venezuelaproduced 60% of the world total in 1900. The West African coast expanded production rapidly and by 1937 was producing about 66% of the world total. Other tropical countries-Ceylon, Samoa, Netherlands Indies and the Philippines—produced about 4%. Most of the African crop was marketed in Europe, while 65% of the South American crop was imported into the U.S. Prior to World War II, Europe was beginning to be a big buyer of South American cocoa. The war cut Europe off, and most of the South American crop went to the U.S. World production of cacao beans in the prewar period 1935-39 averaged about 1,442,000,000 lb., of which about one-third was produced in South America and the rest in Africa and other tropical countries. Production declined until 1944, when the world crop was estimated at about 1,000,000,000 lb.

U.S. Imports of Cocoa, 1937-46 619,051,000

1937 · · · 1938 · · · 1939 · · . . . 453,097,000 . . . 663,779,000 . . . 728,950,000 . . . 692,922,000

The discovery that cocoa has high food value and the growth of the milk chocolate industry stimulated consumption both in the U.S. and elsewhere before the war. Consumption would probably have continued to increase rapidly during the war had shipping been available to take care of the beans. The U.S. armed forces were given large supplies, and civilians were severely restricted. In 1940, the British consumption was taken under control by the government and reduced 20%. The British government also purchased the crop from West Coast Africa to protect growers. Imports into the U.S. dropped to 239,651,-

000 lb. in 1942 from 692,922,000 lb. imported in 1941, but recovered to 682,314,000 lb. by 1944. The sugar shortage was a factor in reducing candy and chocolate manufacture. Cocoa surpluses grew in both Africa and South America. A part of the African crop was destroyed, and some of the South American crop was stored to be held until the end of the war. The Combined Food board made allotments during the war in accord with the sugar and shipping situation. About 80% of the U.S. supply of cocoa came from South America in 1942 and 61% in 1943.

The price of cocoa beans was definitely downward for two decades as the world production expanded faster than consumption. Ceiling prices were fixed by the Office of Price Administration during its administration. The price of the ordinary grade cocoa "accra" was at the low point of 4.8 cents per pound in 1939 and increased steadily to 8.9 cents per pound by 1943. The high grade "arriba" ranged higher in price-10.5 cents per pound in 1939 to 11 cents per pound in 1943. In 1927, each grade sold for double these prices. With large world production and a strong and growing demand supported by the high regard for milk chocolate as a food, the future of the industry was considered very bright. The demand for chocolate had been affected by the general level of employment and wages, but in 1946 it was considered less as a luxury than it was a generation before. (See also CANDY.)

Coconuts

The coconut industry had become quite important to the United States at the beginning of the decade 1937-46, as many essential uses were made of coconut oil. Since it is a tropical crop, all of the nation's requirements were imported, either in the form of oil or copra, the coconut meat. Imports of both oil and copra had increased after World War I. Oil imports rose from an average of about 275,000,000 lb. to a record of 379,652,000 lb. in 1938. World War II checked the commerce in oil so that by 1943 the imports had dropped to 42,668,000 lb. Most of the U.S. supply came from the Philippines, which was cut off from the U.S. in 1942-44. The small supply imported in these years came mostly from Ceylon, India and the French Pacific islands.

The imports of copra had increased more rapidly than those of oil after 1925 and reached a high record of 653,-182,000 lb. in 1933. In 1937, imports were 566,651,000 lb.; the war then caused a decline to the low point of 183,-926,000 lb. in 1943. The chief requirements for coconut oil in the U.S. in prewar years were for soap, drying oils and a small amount for food products. As oils became scarce, less was used in paints and soaps. In 1943, an excise tax was placed on coconut oil processed in the U.S., and in 1937 the supreme court upheld the law. This tax was paid back to the Philippine government. The large corn and cotton crops of 1937 also provided a large supply of oil in competition with coconut oil. Prices declined about 50% from 1937 to 1938. When World War II began, there was a large stock of coconut products in the Philippines. Considerable amounts were shipped to Europe for livestock feed, but this trade stopped in 1940 and prices dropped to a record low level.

Production of coconuts in South America had never been large, but when the Philippine supply was cut off, Honduras began to develop an export trade. Previously,

shipments had consisted only of nuts for the holiday trade and a small amount of copra. By 1945, imports from South America had increased to about 43,000,000 nuts. With the reopening of trade from the orient it appeared unlikely that South or Central American countries could compete successfully with the older sources of supply.

Coffee

Consumption of coffee in the United States increased more rapidly in the decade 1937-46 than in any period of the country's history. This was true of both total tonnage and per capita use. From an average of about 10 lb. per capita in 1900, the increase was very slow to about 13 lb. in 1937; then came a quick increase to nearly 17 lb. in 1941. The five years preceding 1937 were years of recovery from depression. Prices had dropped, and the imports into the U.S. in 1937 were about the same as they were in 1930. The price averaged 8.9 cents per lb. in 1937 and 13.1 cents per lb. in 1930. From 1937-41 the price doubled. In total volume the U.S. imports of coffee amounted to 1,734,137,000 lb. in 1937 compared with previous records of 1,728,569,000 lb. in 1930 and 1,414,000,000 lb. in

Coffee Imports to the U.S., 1937-46 (In pounds)

*Preliminary estimate.

The increase in coffee consumption was attributed to a combination of low prices, strong purchasing power by consumers, increased consumption by the armed forces and the campaign of advertising by the National Coffee association. The period of coffee rationing, Nov. 1942 to July 1943, reduced consumption for that period, but it recovered quickly when rationing ceased. The decrease was estimated to be about 25% during the period. The problem of overproduction was acute in 1937, and a stock of more than 30,000,000 bags (132 lb. each) was reported. Most of this was in Brazil. Together with the crop of 1937 of 25,400,000 bags this gave a supply for 1938 of more than 67,000,000 bags, while the world's annual consumption was only about 24,000,000 bags. The Brazilian government bought 30% of the 1938 crop and destroyed it. Between 1931 and 1937, Brazil destroyed nearly 50,000,000 bags of coffee. The Latin-American countries met in Cuba in 1937 to make a coffee marketing agreement but did not succeed in putting it into effect until 1941. The 14 American coffee-producing countries signed the Inter-American Coffee agreement to establish quotas on exports and U.S. quotas on imports, thus helping to stabilize the market. The quota system provided for the share that each country should sell to the U.S. and other countries. The outbreak of World War II demoralized the Brazilian coffee market for a time, but heavy shipments soon followed as

Coffee being loaded onto trucks at Fazenda, Brazil

many countries sought to build up their stocks. World trade increased quickly to more than 50,000,000 bags in 1939. Of the total quotas of imports, Brazil was allowed 58.2% in 1941; 47.9% in 1942 and 42.4% in 1943. Colombia was second with quotas of 19.7% in 1941, 26% in 1942 and 30% in 1943. All other countries shipped less than 4% each.

The price of coffee was fixed by the Office of Price Administration in Dec. 1941, and continued with small changes through the war. There was an irregular downward trend during 1930-40, when the average import price reached the extreme low of 6.2 cents per lb. Increases followed to 12.5 cents in 1941, 13.7 cents in 1942 and 13.7 in 1943. There was a wide range in the price of different grades. Colombian mild coffee ranged higher than other types and increased from a low of 9.12 cents per pound in 1940 to 16.25 by 1942, as compared with Brazilian (7.1 cents to 13.3 cents in 1942). In August, 1946, after the OPA law was restored, the ceiling prices of coffee were raised two cents a lb. to importers. A retail increase of 10 to 13 cents was granted to retailers at the same time. Subsidies to importers ceased on July 1 and were not revived because subsidy funds were limited.

The low prices did not serve to reduce production, because coffee is not an annually planted crop but a tree crop that should be harvested every year. The Dutch and Brazilians tried to stabilize prices by storing the surplus to be sold in years of short crops. But there were not enough short crops. A tax on new plantings was tried by Brazil. This was followed by the "sacrifice quota" plan, by which a part of each grower's crop was bought by the government

at very low prices to be destroyed. The area suitable for coffee production in Brazil was estimated to be more than 20 times the whole world area in coffee.

Industrial uses for coffee were the subject of extensive experiments during the decade 1937-46. A new plastic called "colelite" was produced in Brazil in a plant at São Paulo. Other uses were tested with considerable promise of success. The postwar prospects for coffee were not especially promising because of the expected reduction in demand in the U.S. and the loss of much of the market in Europe. Some increase in per capita consumption might, however, occur over another decade. Should this happen in Europe the large population there would require much more than world supplies of 1946. (See also Brazil; Price Administration, Office of.)

Coinage

During the years 1937-46 inclusive, the bureau of the mint operated mints—under the director of the mint at Washington, D.C.—at Philadelphia, Pa.; Denver, Colo.; and San Francisco, Calif.; the U.S. assay offices at New York, N.Y., and Seattle, Wash.; the U.S. depository (for gold) at Fort Knox, Ky., and the U.S. depository (for silver) at West Point, N.Y.

Electrolytic refineries were operated at the New York assay office and the mints at San Francisco and Denver. All coinage dies used in the mints were made in the engraving department of the Philadelphia mint.

The U.S. mint at New Orleans, La., originally established in 1835, was discontinued as of June 30, 1942. The appropriation granted for operation of the mints and assay offices during the fiscal year 1943 did not provide funds for the New Orleans mint.

The silver bullion depository, constructed on a site formerly included in the military reservation at West Point, was completed in Dec. 1936 and the first silver was stored there in Jan. 1937.

Following was the silver and minor domestic coinage of the U.S. mints by number of pieces for the calendar years 1936–45, inclusive:

(Cal	ene	da	r Y	ec	ır			No. Subsidiary Silver Coins (50 Cents, 25 Cents, 10 Cents)	No Minor Coins (5 Cents, 1 Cent)	Total
1936									184,843,732	538,132,989	722,976,721
1937									122,944,099	497,056,089	620,000,188
1938									52,813,591	227,903,099	280,716,690
1939									159,608,050	514,481,055	674,089,105
1940									168,593,952	1.040.885.030	1,209,478,982
1941									419,226,456	1,408,259,820	1,827,486,276
1942									525,981,572	1,104,673,800	1,630,655,372
1943									539,540,600	1,484,357,670	2,023,898,270
1944								٠	522,119,800	2,321,837,000	2,843,956,800
1945	•	٠	٠	٠	٠	•	٠	٠	396,637,401	1,664,058,100	2,060,695,501
T	ota	ı.	•			•			3,092,309,253	10,801,644,652	13,893,953,905

From the opening of the mint in 1792 through the calendar year 1935, 13,650,000,000 coins (in round numbers) were produced; of these, 12,600,000,000 were domestic and 1,050,000,000 for other governments.

During the ten years 1936-45, 17,344,283,847 coins were made or 27% more pieces than the total coinage prior to that period. Of these, 3,450,329,942 were for other gov-

ernments, 225% more than the previous total foreign coinage.

Coinage by the United States for other governments from Jan. 1, 1936, to Dec. 31, 1945, was as follows:

1936.						32,350,000	1942							307,737,000
1987 .						26,800,000	1943							
1938.						48,479,644	1944	•	•	•	•			788,498,000
1939.							1945	•	٠	٠	•	٠	٠	1,802,284,798
1940.														0.450.000.040
1941.	•	٠	٠	٠	٠	208,603,500	Total	٠	٠	٠	•	٠	•	3,450,329,942

Coins were made for China, Honduras, Colombia, Nicaragua, Cuba, Venezuela, Dominican Republic, El Salvador, Indo-China, Panama, Netherlands East Indies, the Netherlands, Curaçao, Surinam, Liberia, Australia, Peru, Belgian Congo, Bolivia, Ecuador, Great Britain (Fiji Islands), Belgium, France, Guatemala, Saudi Arabia, Denmark, Ethiopia, Philippines and Greenland.

The newly designed Thomas Jefferson five-cent nickel-copper coin was issued in 1938, replacing the Indian head or buffalo design coin. It was designed by Felix Schlag, with a likeness of Thomas Jefferson on the obverse, and Jefferson's home, Monticello, on the reverse.

Manufacture of the nickel-copper five-cent coin was discontinued in May 1942 because of the need of those metals for other uses in connection with the war effort. The Second War Powers act (March 27, 1942) provided for a five-cent coin of half silver and half copper, with authority to vary those proportions and to add other metals if in the public interest. The alloy for the coin, adopted after considerable experimentation, was finally determined as 35% silver, 56% copper and 9% manganese. The adoption of this alloy effected a saving for war uses of all the nickel and about one-fourth of the copper formerly used in the five-cent coin. Production of the coin composed of this alloy was started on Oct. 1, 1942, its design, size and weight (77.16 grains) being the same as the cupro-nickel coin. It was coined until Dec. 31, 1945, and on Jan. 1, 1946, coinage of the cupro-nickel alloy (75% copper, 25% nickel) was resumed.

Production of bronze one-cent coins was sharply curtailed beginning in July 1942 and entirely discontinued in Dec. 1942 because of the necessity of conserving copper for U.S. war industries. During the interim, extensive experimentation was made with various substitute materials in an effort to obtain a non-strategic material which would be satisfactory for coinage purposes and suitable for coin-operated devices. A zinc-coated steel coin was finally adopted, production of which was commenced on Feb. 23, 1943, pursuant to the act of Dec. 18, 1942.

The standard weight of the coin was 42.5 grains, compared with 48 grains for the bronze cent.

Production of the zinc-coated steel cent was discontinued on Dec. 31, 1943. The total number struck from the beginning of production in Feb. 1943 was 1,093,838,670 pieces, value \$10,938,386.70. Beginning Jan. 1. 1944, production of a copper-zinc coin was commenced, the composition of the alloy being 95% copper and 5% zinc. This was done under authority of the order of the acting secretary of the treasury, filed with the federal register, Dec. 15, 1943, pursuant to the act of Dec. 18, 1942, public law no. 815, 77th congress. The change was made as a result of the availability of fired brass cartridge cases to which copper was added to produce the alloy. The standard weight of the coin was 48 grains.

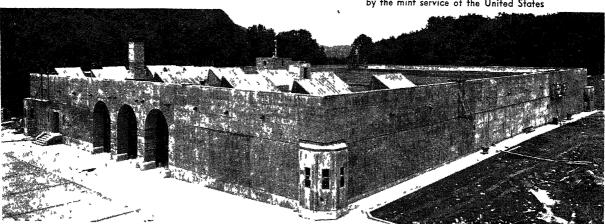

The design of the dime was changed early in 1946, the "liberty head" coin being superseded by the ten-cent piece commemorating President Roosevelt, released on Feb. 5, 1946. The new coin, designed by John R. Sinnock, the mint's chief engraver, was of exactly the same size and metallic content as the preceding dime. The "head," or obverse side, bore a portrait of Roosevelt facing left, the word "Liberty" around the left border, in the lower left field "In God We Trust," and the date, 1946, in the lower right field. The reverse side carried the torch of liberty centred with the olive branch of peace on the left, and to the right the oak branch signifying strength and independence; inscribed around the upper border was "United States Of America", around the lower border "One Dime"; across the lower field "E Pluribus Unum."

The winged liberty head dimes outstanding were to continue to circulate but no more would be minted. The first ten-cent coins bearing the pattern created by Adolph A. Weinman were struck in 1916. As of late Dec. 1945 when the last of the liberty dimes passed through the presses, the mint had put out a total of 2,677,232,448 of these coins. The new Roosevelt dime was the fourth portrait coin in the present series, all honoring former presidents. The others were the Lincoln penny, the Washington quarter and the Jefferson nickel.

Silver coins of the United States are composed of 90% silver and 10% copper. Their weights are as follows: dollar, 412.5 grains; half-dollar, 192.9 grains; quarter-dollar, 96.45 grains and dime, 38.58 grains. The five-cent piece is composed of 75% copper, 25% nickel and weighs 77.16 grains. The one-cent piece weighs 48 grains and its alloy is 95% copper and 5% zinc.

The medal division at the Philadelphia mint made all medals for the navy, coast guard and marine corps during

the war and many for the army and other government agencies. Approximately a million medals were delivered in the fiscal year 1946. Medals made for the navy, coast guard, marine corps and army included the navy cross, silver star, distinguished flying cross, navy and marine corps medal, air medal, Purple Heart, expert rifleman, expert pistol shot, life saving medal, Peary polar expeditionary and bronze star. The output also included 68,577 lapel buttons and 145,934 ribbon bars. Orders for medals, instead of decreasing with the end of the war, increased almost 1,000%. In mid-1946 the mint had on hand orders for approximately 10,000,000 medals, requiring further streamlining and modernizing of the medal department. (L. Ho.)

Great Britain, Commonwealth and Europe.—No gold coins were minted during the years 1937–46 in Great Britain, the dominions or on the European continent. Nevertheless, the royal mint of London and all the mints of the countries concerned were fully occupied, owing to the increase in the production of token moneys.

As early as 1937, the last year for which an annual report was published, the royal mint was unable to cope with the increased demand and had to enlist the assistance of two private mints in England. This was due to the increased demand for silver, bronze and brass token moneys, both for home requirements and for the empire, brought about by higher prices and improved conditions of employment during the years preceding World War II. During the war, the demand for token moneys continued to grow. Military requirements accounted partly for the additional demand. The increase of the number of wage earners and their incomes was mainly responsible for a higher demand in Great Britain, while higher produce prices contributed to the increase in the requirements of the dominions and colonies. On the continent, similar tendencies were at work, even though shortage of metals induced some of the German-occupied countries to print notes of small denominations instead of having silver, bronze or nickel coins.

There was a particularly strong increase in the demand for coins by those British and French colonies which served as bases for military operations. Their backward populations were unwilling to accept notes on an increased scale, and the only way in which their increased earnings could be financed was through an increased issue of silver and bronze coins. As the European goods on which the native population could have spent its larger earnings became more scarce, a large part of the coins issued to them disappeared from circulation, through hoarding or ornamental use, and new consignments had to be dispatched to the colonies at frequent intervals.

The volume of coins held by the public increased heavily in India. Although the note issue also increased, larger volumes of coins had to be put into circulation to meet the requirements of the rural population, which was not used to notes and found them useless for hoarding. In order to entice food from its hoards, and thus to relieve the famine, the government sold gold and silver coins and bullion on a large scale. Notwithstanding the high price of such coins, there was a strong demand for them, for an increased buying power had been brought about in India by the industrialization of the country during World War II. Without the opportunity of hoarding gold and silver, people would have hoarded food and other goods to an even larger extent than they did, and a critical situation might have arisen.

The same device was applied by the British authorities in various parts of the middle east in order to counteract the effects of inflation on the price levels in countries under Allied occupation. A large part of the holdings of gold coins of the Bank of England and the South African Reserve bank was sacrificed for this purpose.

After the liberation of Europe, it became necessary to make similar use of gold coins in Greece. Inflation under German occupation had reached an extreme stage by the time the country was liberated, and in order to achieve stability it was first necessary to restore confidence by putting gold coins (mainly sovereigns) into circulation. Owing to civil disturbances and the fear of future political trouble, however, the stabilization of 1944 was unable to restore confidence in the drachma: More gold coins had to be put into circulation in an effort to moderate the second wave of depreciation during 1945-46. Sovereigns came to be regarded as the real standard of value of the country. While drachma notes were accepted as a medium of exchange, prices were fixed on the basis of the value of sovereigns in terms of drachmas. In the markets and in shops it was almost impossible to buy anything in the morning until the opening quotation of sovereigns became available; then the merchants adjusted their prices to the change in the price of sovereigns.

Gold coins came to play a somewhat similar part in other European liberated countries. In France there was a very large turnover in French and foreign gold coins in the black market during 1944–46. Their price rose well above the official parity, and remained at a heavy premium even after the devaluation of the franc at the end of 1945, but during the summer of 1946 the influx of gold coins from Greece and Mexico caused their price to fall.

During the early years of World War II, the compulsory surrender of gold coins in Great Britain and other countries to the governments and the seizure of private gold hoards by the German occupation authorities on the continent, resulted in a decline of gold coins held outside official reserves. Toward the end of the war and after the war, however, this trend was reversed. Private hoards of gold coins in India and some continental countries, were probably much larger in 1946 than they were in 1939. During the concluding phases of the war and after there was some hoarding of silver and even of bronze and nickel token moneys in countries such as Greece, Hungary and Rumania, where inflation had reached such an advanced phase that the metallic value rose well above the face value.

In Sept. 1946 the British parliament passed a Coinage act under which no more silver coins were to be minted for the United Kingdom; the existing silver coinage was to be replaced by coins of a copper-nickel alloy. The object of this measure was to avoid having to spend foreign exchange on imported silver and to repay in kind silver borrowed from the United States during World War II.

Coke

The major use for coke continued to be in the production of pig iron, and the trend of output during the years of World War II was determined largely by a country's need for and ability to produce pig iron. So far as available, data on production in the major countries are shown in Table I.

Coke requirements in the United States were greatly increased by war demands for iron and steel, and output expanded nearly a half over that of 1937. Demand did not reach its peak until 1944. Production began to lag in 1945, but did not drop heavily even after the close of the war, being maintained by the need for iron and steel in the reconversion of industry to a peacetime basis until reductions were forced early in 1946, first by a strike in the steel industry and then another in the coal industry. Even though the 1945 output declined a% from

output accorded 9/0 from
that of 1944, it was still a quarter larger than that of 1937,
and an eighth above the peak of 1929. Reduced by low out-
put during the periods of the steel and coal strikes, which
extended over most of the first quarter of the year, produc-
tion for the first three quarters of 1946 declined to 38,-
407,125 tons of by-product and 3,077,916 tons of beehive
coke, a total of 41,485,041 tons, as compared with 52,339,-
100 tons in the corresponding period of 1945. Normal pro-
duction also suffered a further shrinkage, caused by the
second coal strike of 1946, in November and early Decem-
ber.

While coke production in Canada remained relatively small as compared with that of the United States, it was enlarged even more by war demand; the peak output of 1944 was 62% greater than that of 1937. Furthermore, the figures in Table I include only by-product and beehive coke; besides oven coke, there was an output of breeze and gas retort coke which, when added to the other, would increase the totals by 400,000 tons to 500,000 tons a year, or about one-sixth. As in the United States, production in 1945 receded from the war peak, and continued to decline in 1946. Output in the first eight months of 1946, including breeze and gas retort coke, was 2,207,000 short tons, against 2,638,000 tons in the same period of 1945. (G. A. Ro.)

Colchicine

See HORTICULTURE.

Cold, Common

The common cold is probably not a single disease entity, but includes a group of conditions with similar symptoms. Colds and infections of the upper part of the respiratory tract are responsible for an enormous amount of temporary illness and enforced absence from employment. In Dec. 1941, a one week's survey indicated that there were colds in one-third of all U.S. homes, with an estimated 18,000,000 persons afflicted. There were more colds among children under ten than in any other age group. The survey suggested that about one person out of every four with a cold came under treatment by a physician.

The greatest frequency of common colds in the northern hemisphere seems to be during three periods—January and February, April and May, and September and October. The January and February peak is the most serious as judged by absence from work and the development of

severe complications. A high degree of contagiousness is generally recognized, as is the part played by the common cold in industrial absenteeism. In certain large industrial plants the pattern for colds gave the highest incidence in December, with a lesser peak in October. As would be expected, July was the month of lowest incidence.

Several studies of colds emanated from the U.S. navy. A hospital ship report showed that because of the continual arrival of large numbers of military personnel from temperate zones, acute respiratory infections in the tropical islands in the Southwest Pacific area were common. This raised an important military problem. One review of the frequency of common colds in the navy over a 60-year period revealed an estimated 2,500 per 1,000 men per year, or an average of two and a half colds per year for every man.

Both the number and the severity of colds increase following sudden drops in air temperature. This relation is more exaggerated among office workers than among factory workers, and among women than among men. Colds tend to become increasingly severe with age, but at the same time they occur less frequently. The workers in industrial plants which have air conditioning have fewer colds than those without it. Those who work in draughty places are reported to have an exceptionally high frequency of colds. More colds start on Monday than any other day of the week. A slightly increased tendency to acquire a cold was found in a small group of college girls accustomed to the use of cigarets. But the relationship between smoking was not demonstrated, since most of the smoking was done in large rooms which encouraged crowding and hence tended to spread colds by droplet infection.

Cause.—The cause of most common colds is believed to be a virus, a living substance too small to see under the ordinary microscope. There may be more than one kind of virus which can produce the symptoms of what goes by the name of common cold. Also, after the initial virus invasion, there is frequently infection with ordinary germs like streptococci and pneumococci. Probably this latter infection is responsible for many of the complications of the ordinary cold and perhaps for some of those which do not clear up rapidly.

Prevention and Control.—The decade 1937-46 brought increasing recognition of the part which exposure to those who already have colds plays in the spread of the common cold. Almost certainly the causative agent of the common cold is propelled into the air with small droplets when a

person coughs or sneezes. These droplets float about in the air and if inhaled by a susceptible person are likely to cause a new common cold. Crowding, consequently, provides ideal conditions for the spread of the common cold.

During World War II, crowded conditions were particularly difficult to control in military installations. This resulted in a number of efforts to decrease respiratory infections under military conditions. Especially important in this respect were the attempts to lay dust by oiling bedding and floors. In a British army experiment where wooden floors in barracks were oiled regularly, the average rate of respiratory infections, over a comparable period of time, was only 7 per 1,000 men as against 38 per 1,000 in a control unoiled unit.

Also during the decade, attempts were made to control the spread of common colds by ultra-violet irradiation and by so-called aerosols. The ultra-violet irradiation of the air held some promise under certain circumstances. Some experiments with aerosols likewise were successful. These aerosols consist of a vapour containing some substances which destroy bacteria. In one example of the use of aerosols, glycol vapours were employed in a home for convalescent patients. As a result the total rate of incidence of upper respiratory infections among the residents whose air supply was disinfected by glycol vapour decreased greatly.

Many attempts were made to vaccinate against common colds with the purpose of raising the resistance or immunity of large numbers of potential victims. Although a few reports suggested that vaccination does reduce the frequency of colds in college students, industrial workers, or other groups, the majority opinion seemed to be that vaccination does not have proved value as a means of materially reducing the frequency of the common cold. Vitamin C, or ascorbic acid, was also tried as a means of preventing colds, but the most carefully controlled studies did not show that this vitamin had any definite effect.

During World War II, especially in U.S. navy and air force installations in the United States, the residents of barracks were given one of the sulfonamide preparations, usually sulfadiazine, in fairly small doses for the lengthy period when respiratory infections were at their worst. Extensive reports on this subject were made, and the evidence seemed clear that such sulfonamide administration definitely decreased, though it did not eliminate, some of the upper respiratory infections commonly classed as colds.

Variation in individual resistance to the common cold received general recognition. One student of the subject carried out tests on a large number of healthy students and reported a correlation between the ability to maintain a capacity for good response to effort and exposure and the ability to avoid the common cold. As a result, it was suggested that the causal agent of the common cold may be capable of producing symptoms much more readily when the normal defenses of the body have been made temporarily vulnerable as a result of fatigue.

Other methods which were tried to prevent common colds included a vaccine for spraying directly into the nose, the use of antiseptic snuffs and large doses of vitamins. Although those who originally reported trial of these methods mentioned good results in a high proportion, general confirmation was not obtained.

Treatment.—The treatment of the common cold did not make much progress during the decade. Neither the sulfonamides nor penicillin were found to be of value for ordinary colds or influenza. People who have had one cold do not seem to develop much resistance to other colds, at least for any prolonged period. This may be because sev-

eral strains of viruses can produce colds, or for other reasons; whatever the explanation, treatment based on building an immunity or resistance was not successful. Penicillin was given for colds in the form of a fine spray or aerosol to be inhaled. It did not seem to affect the cold itself, but might have some value in the prevention or treatment of some of the complications.

In one U.S. army study, sulfadiazine was found helpful in reducing the number of days spent in the hospital (all the patients in this group were hospitalized) and in treating and preventing the complications of "nasal pharyngitis." Powdered sulfathiazole was employed in one study by blowing it into the nose after shrinking the mucous membrane with ephedrine hydrochloride. Patients who received this treatment had to refrain from blowing the nose or clearing the throat for several hours. Conclusions on this method of treatment were not drawn at the end of the decade.

Since there was still no drug, vaccine or other preparation having a specific action on the common cold, the best treatment still seemed to be complete bed rest, begun as early as possible and kept up until symptoms are gone. Plenty of liquids and such soothing preparations for the nose and other symptomatic measures as are indicated in the individual patient are also advised.

Research.—Organized research on the common cold was a generally recognized need. A hopeful sign was the establishment of a Common Cold Research unit in England in 1946 by the Medical Research council and ministry of health. This unit was housed at the Harvard hospital near Salsbury, which was built and equipped in 1941 and given to the ministry of health by Harvard university and the American Red Cross as a place for research in communicable diseases. Because there still were no animals thoroughly satisfactory for studies on the common cold, it was announced that human volunteers would be required for tests carried out at this new unit.

Colijn, Hendrick

Colijn (1869–1944), Netherlands statesman, was born June 22, 1869, at Haarlemmer Meer. He was Dutch prime minister from 1925 to 1926 and again with brief intermissions from 1933 to 1939. An advocate of world peace and economic stability, Colijn was chairman of the World Economic conference in London, 1933, and was also a prominent figure in League of Nations circles. His party won popular support in the 1937 general elections and he formed his fourth cabinet in June of that year. His fifth cabinet, however, lasted only a few days after taking office, July 23, 1939. An outspoken critic of German national

socialism, Colijn urged his country, in the months before the German onslaught of May 1940, to abandon its traditional neutrality policy for one of self-defense. A year after the nazi invasion, Colijn was arrested and interned in a concentration camp. The Netherlands News agency in London reported that he died of a heart ailment while still in nazi hands, Sept. 16, 1944.

Colombia

A republic located in northwestern South America at the juncture of the Isthmus of Panama with the continent, Colombia is the only South American country with both a Caribbean and Pacific littoral. Area: 439.714 sq.mi. The population was officially estimated in 1945 to be 10.701,-816; the census of July 5, 1938 showed a population of 8,701,816 and later official estimates were: 1941, 9,334,392; 1942, 9,523,200; 1943, 9,620,800; 1944, 9,905,748. The average population density for the entire country in 1944 was 22.52 per sq.mi. The principal cities (with later population estimates given first and 1938 census figures second) are the capital, Bogotá (434,240; 325,658), Medellín (215,-830; 143,952), Barranquilla (202,760; 150,395), Cali (133,-140; 88,366), Manizales (108,260; 51,025), Cartagena (100,-360; 72,767), Ibagué (76,215; 27,448), Cúcuta (70,039; 37,323), Bucaramanga (63,864; 41,714), Pasto (58,436; 27,564) and Ciénaga (45,428; 22,783). The population is largely concentrated on the eastern Andean plateau, the interior departments of Antioquia and Caldas, the upper Cauca valley and the Caribbean coast. Racially the population was classed as 68% mestizo, 20% white, 7% Indian and 5% Negro. The official language is Spanish and the predominant religion Roman Catholicism. Colombia has a unitary government in which the president is elected by direct vote for a term of four years but cannot succeed himself. There is no vice-president; a "designate" is elected annually by congress temporarily to succeed the president in case of his death or resignation. Military service for a period of two years is legally required of all males between the ages of 20 and 30. Colombia is divided territorially into 14 departments, 4 intendencies and 6 commissaries. Presidents during the decade 1937-46 were: Alfonso López, 1934 to 1938; Eduardo Santos, 1938 to 1942; Alfonso López, 1942 to 1945; Alberto Lleras Camargo, 1945 to 1946; Mariano Ospina Pérez, after Aug. 7, 1946.

The López Administration.—At the beginning of 1937 the presidency of the Republic of Colombia was in the hands of Alfonso López, who had assumed office on Aug. 7, 1934. A former banker with a brilliant position in business and social circles, the son of one of the richest coffee exporters, López had entered politics quite by accident in opposition to the Conservative party which had ruled the country from 1886 till 1930. His influence was decisive in launching the presidential candidature of Enrique Olaya Herrera, a Liberal, who won the elections in the latter year by a large majority because the conservatives had split into two large groups. López served as head of the Liberal party during Olaya's administration, and was afterward elected president without any opposition. While in office he carried out daring political, social, economic and fiscal reforms. He obtained the approval of congress for a great change in the system of taxation, increasing tax scales, establishing income and excess profit taxes. Congress consented to his proposals for constitutional reform,

which were to annul arrangements that had permitted the intervention of the Catholic Church in public education, and to settle the principles of state intervention in private enterprise. Strong resistance was being encountered by his government, which was upheld with enthusiasm by popular support and especially by organized labour. The political opposition left its conservative platform under the leadership of López' old friend and fellow worker in mutual campaigns against the conservative government, Laureano Gómez. The Conservatives had decided to abstain from voting, so that Congress was made up of Liberals exclusively. But within this party there were two currents, although not well defined until that time, one of the right and one of the left. The former tried to moderate the government's tendency toward social progress, while the latter tried to hasten it. In the centre, a group under the leadership of Eduardo Santos, owner of El Tiempo, the newspaper with the widest circulation in the country, tried to reconcile the two tendencies, and advocated the presidential candidature of Olaya Herrera for re-election. Olaya was at that time ambassador at the Vatican.

In Feb. 1937 Olaya died in Rome. Among the Liberal majority in congress a large group had from the first been proposing the candidature of Eduardo Santos, whereas the left wing supported Darío Echandía, the prime minister in López' government. Echandía resigned from the government to enter his name as a candidate, and was successful in obtaining the nomination. The oncoming elections for the chamber of representatives and the assemblies of the departments gave the people an opportunity to intervene in the selection of a Liberal candidate. On April 4 Santos obtained 85 seats in the chamber, and Echandía 25. The Conservatives did not vote. In addition there were 5 Independents and 3 Communists. Santos obtained a majority in all the assemblies of departments. The Liberal party convention later acknowledged him as candidate.

The right wing of the Liberals desired to make the outcome of the contest appear a popular censure of López, in spite of the repeated declarations of Santos regarding his intention of carrying on the policy followed by López. On one and the same day the government suffered two defeats, in the chamber of representatives and in the senate, and López announced his resignation to the senate on May 24. On May 26 the senate declined to accept it. The crisis ended with a clarification of the relationship between the Liberal party and the government. Santos made a journey to Europe.

López continued to push his social legislation. Agitated discussions went on about a land law which was intended to solve the problems arising out of the innumerable conflicts between the owners of large estates and the colonos (landless peasants). These colonos cultivated small sections of land after taking hold of them without the consent of the owner until the latter had them evicted by the force of law. These evictions often gave rise to fights between the police and the colonos and at times blood was shed. The new law established that landowners were to lose the title to such parts of their estates as had not been exploited economically during the preceding ten years, and that the land should go to those who had worked it. This ended the conflicts but in order to avoid further difficulties the landowners dismissed many of their former workers whom they had permitted to cultivate their lands, thereby reducing agricultural production considerably.

Union activity was strong during the López administration, and there were many strikes, including some in river transport and the railways, which were illegal under the constitution, and were ended easily with the intervention of the government. Unionism, which had begun to exercise its rights freely, abused the good will of the government toward its cause. But salaries increased considerably, and with them the industrial production and consumption of the country. As a result the treasury benefited from the increase in revenues, and a general prosperity began at that time, lasting through the decade.

Santos Administration.—In May 1938 Eduardo Santos was elected president of the republic without opposition, by 450,290 votes. The Conservatives who looked on his candidacy with sympathy, did not vote. The office was transferred to him on Aug. 7.

The administration of Santos began in a general atmosphere of amity, and in Sept. 1938 Laureano Gómez announced that the Conservative party would end its abstention from voting. Santos surrounded himself with moderate ministers, all of them belonging to the Liberal party. The Conservatives started political campaigns praising the position of the new president in relation to his party. But in Jan. 1939 when the campaign for the elections to congress and the assemblies of departments (which in turn elected senators) had begun, a clash occurred between Liberals and Conservatives in the village of Gachetá, in which 9 persons were killed and 17 wounded. Laureano Gómez accused the police of having fired at his fellow party members, and promoted sharp attacks in the press against the government and Santos personally. A meeting of the Conservative party issued a declaration stating the necessity for a personal armed defense of its membersa policy which was called acción intrépida (fearless action). The president condemned it as anti-democratic and as dangerous to the peace of the country. Some Conservatives refused to conform to the violent instructions laid down by Gómez. The primate of Colombia, Archbishop Perdomo, called the acción intrépida anti-Christian, and when the Conservative party convention met, a group of prominent members withdrew from it, although the majority elected Gómez as sole head of the party. In spite of his apparent success Gómez felt that he had been defeated by those resisting his policies and left the country. In the elections the Conservatives were routed. The Liberals obtained control of both houses. Gómez returned after a short while in order to enter the senate, where he now began a systematic opposition to the Santos government, an opposition which gradually increased in intensity toward the end of the president's administration.

The invasion of Poland by the Germans and the Anglo-French declaration of war led the Colombian government to apply the international laws of neutrality. It was decided that the planes of the commercial air line Scadta, founded by Germans and managed by German subjects, were to carry co-pilots of the Colombian air force on its trips. At the conference of the foreign ministers of the western hemisphere in Panamá, Colombia adhered to the measures of precaution and neutrality taken by all the countries of the continent. The conservatives opposed the foreign policy of the government. Ever since the civil war in Spain that party had shown sympathies for the totalitarian countries, principally because of its marked anti-communist tendencies.

After the invasion of Belgium and the Netherlands, President Santos defined the foreign policy of Colombia by saying that the country would continue to be neutral, but could not remain indifferent to the threat of totalitarian expansion. In June 1941 the government took several security measures. The pilots and German employees of Scadta were forced to withdraw from that air

line. Foreigners were torbidden all intervention in politics and all propaganda activities, and new regulations for their expulsion from the country were laid down. Colombia collaborated actively in the resolutions of the Pan-American conference in Havana, which formed the basis for joint hemispheric action as applied after Pearl Harbor.

Ever since the first year of the administration of President Santos, a movement had been rising within the Liberal party which aimed at re-electing Alfonso López for a new term as president, against the tradition of the country. (The constitution-prohibited re-election of a candidate for a period immediately following his term of office.) This movement based itself on the enormous popularity which López had enjoyed when he lett the presidency. López had gone to the United States with the intention of leaving politics and establishing himself in New York. Only in June 1940 did he inform his friends that he was ready to accept the candidacy. There were large groups which opposed López' re-election; President Santos himself appeared to oppose it in his newspaper El Tiempo, of which he was the guiding spirit. The Conservatives rejected the probability of López' returning to office. Laureano Gómez said in the senate that, if the Liberal party were to put López forward as their candidate, a personal attack might be made on that citizen. He explained his thoughts afterward by adding that the Conservatives would go as far as civil war to prevent a victory of López. The ambassador to Washington, Gabriel Turbay, also announced his intention to oppose himself to the candidacy of López. López returned to Colombia and began one of the most vehement and bitter political battles in the history of the nation. He fought both the government and that section of the Liberals hostile to him. Lleras Restrepo, minister of finance, left the cabinet and was appointed director of El Tiempo to start the campaign against López. In the elections of March 1941 López obtained a majority in the chamber and in many of the assemblies over his Liberal adversaries, but the Conservatives and the Liberals hostile to him formed temporary coalitions which frustrated his victory. In August the Liberal convention met again, at which López obtained a majority of only one vote. After agitated discussions it was dissolved without reaching an agreement, but the majority, the adherents of López, remained in session and proclaimed him candidate. Many Liberals, although adversaries of López, joined his candidacy. Lleras Restrepo resigned from El Tiempo and returned to the ministry of finance. With this event the conflict between the government and López began to disappear.

In Dec. 1941, a few hours after the United States had declared war on Japan, Colombia broke off diplomatic relations with Germany, Italy and Japan. Congress approved the policy of the government and empowered it to take the steps thought necessary for defense. Under these powers new restrictions were imposed on the activities of foreigners, especially the subjects of the axis countries. The Conservatives, who had hitherto opposed the foreign policy of the government, now remained silent officially, but a group of independent Conservatives continued to adhere to it.

Return of López.—The presidential campaign continued to absorb almost the entire interest of the people until in the elections of May 1942, López won by more than 200,000 votes over the Conservative-Liberal coalition which had supported the candidature of the Liberal Carlos Arango Vélez. Members of the coalition declared that

the elections had been fraudulent and partial to the government, but could not sustain their charges. The Liberal members of the coalition did not wish to join the Conservatives in refusing to recognize the election of López. López, having been declared elected, went to the United States to meet President Roosevelt, and returned to Bogotá at the end of July. At that time furious debates were going on in congress against President Santos, which had been started by the defeated candidate, Arango Vélez. On Aug. 7 López took over the presidency before a congress presided over by Uribe Echeverri and Arango Vélez.

The Santos government had been very effective in its administration. Its firm foreign policy was inclined toward the democratic cause from the first. In April 1941 Santos signed a treaty with the president of Venezuela, General López Contreras, by which the century-old boundary disputes between the two countries were ended. With this treaty Colombia finally concluded negotiations about its borders with all its neighbours.

In 1940 the government consolidated the internal debt in a settlement involving some \$23,000,000; it also made an agreement for the resumption of foreign government loans at the expense of the nation, which was approved by officials of the United States government and was later accepted by the Colombian bond holders. The government made a proper campaign for the defense of the price of coffee on the U.S. market, and entered into negotiations for an agreement on import quotas with that country; at the same time it stabilized prices at home through the creation of the National Coffee trust. It treated social problems with singular dexterity and solved hundreds of conflicts without resorting to force. It had fallen on that government to rule at a time full of difficulties because the war had restricted imports and disturbed commerce; yet it succeeded in maintaining a constant increase in the resources of the budget and in invigorating national economy through the creation of institutions fostering industry.

One of the most agitated and disturbed periods in the history of Colombia started with the advent of López' second administration. The president had defeated his opponents and undoubtedly had much popular support. But his struggle against the Conservatives, against groups within his own party and against the government had left wounds which, as it was shown later, had not healed well. The vigorous and polemical temperament of President López could not adapt itself easily to the reserve and hostility which he encountered with large groups of the intellectuals of the right; his friends, on the other hand, who had directed the electoral campaign against his opponents with strength and energy throughout the whole country, were not inclined to make concessions. The administration was set up on a homogeneous basis, with political associates of López in the government and the exclusion of those Liberals who had opposed him. The relations between López and Santos, who continued to maintain a decisive influence in politics through El Trempo, were subject to continuous crises. The decisions of the new government appeared as reactions to the preceding one. The Conservatives, on their part, deceived by the defeat of the coalition, started campaigns against the government which their own senators called sin cuartel (giving no quarter).

At the same time the Conservatives conducted another campaign, of a religious character, against the proposed concordat between the Holy See and Colombia. The

attack on the concordat, led by Laureano Gómez himself, was on the basis that it made concessions which, in the view of the Conservatives, were unacceptable to Catholics. The Conservatives passed censure on the apostolic nuncio in offending terms, as well as on the primate archbishop, who remained faithful to the Vatican and rejected the case made against the pontiff because of the concordat. A Catholic plebiscite was arranged against the new concordat, and many bishops and priests took the side of Gómez as opposed to that of the Holy See represented by the apostolic nuncio. The Liberals did not enter into the discussions, and in Dec. 1942 approved the concordat in congress after agitated debates. The government declared that it would not put it in force until the Holy See with the consent of the consistory had stated its intentions to carry it out. The Holy See deferred the matter. This religious struggle, commonly called a schism, was one of the causes of disorder which contributed to make the situation more difficult later on.

Another cause of discontent was the anarchic state of transportation caused by the wartime scarcity of vehicles and tires. The government had to establish rigid control of the means of transport on land, fixing the routes of various companies, closing parallel railway routes and taking control of the import of tires. At the same time it established ceiling prices for cars and tires. A series of drivers' strikes, encouraged by political trends, gave rise to grave disturbances more than once between 1942 and 1944.

In Oct. 1942 President López went to Venezuela at the invitation of the government of that neighbouring country, and his office for eight days was in the charge of Carlos Lozano y Lozano, the first vice-president. This visit was returned in June 1943 by President Medina Angarita. In the same year the presidents of Ecuador, Paraguay and Bolivia visited Colombia. On Oct. 26, 1942, Colombia, Ecuador and Venezuela, proceeding by agreement, broke off diplomatic relations with the French government at Vichy.

Year of Crisis.—But the worst year in this time of confusion and political crisis was undoubtedly 1943. This state of disturbance was largely attributed to the echo of great events in the world which had made all Colombians vacillate in their beliefs in the efficiency of the democratic principles which guided the republic. The elections in March passed peacefully, and the Liberals obtained a majority of 300,000 votes over the Conservatives, thus increasing their strength in both congress and the assemblies. But at that time, too, the first sign of disorder within the armed forces occurred when it was found that the secretary general of the ministry of war, General Eduardo Bonitto, was involved in a conspiracy; he was removed from office, condemned by court-martial and dismissed from the army. From then onward General Bonitto appeared as the leader in successive movements against the government, and the Conservatives endorsed him in their public declarations. General Bonitto had served as military attaché at various legations and embassies, on the military staff of Presidents Olaya and López, as chief of protocol in the chancellery, and only exceptionally in the active army. Until that time it had been thought that Bonitto was not capable of conspiracy. This first incident was not considered important and was taken more as a joke. But the Conservative propaganda began to infiltrate the army and especially tried to make López appear an enemy of the armed forces. The young officers' corps and some high officers with Conservative affiliations felt themselves encouraged by the coups d'état carried out in other countries.

With his characteristic daring, López also estranged business and industrial groups through his first measures to prevent the rise of prices and to curb inflation. He created price control, ordered the legal holdings of the banks doubled and took measures to freeze 20% of all business profits. These measures were received with indignation in financial circles, and all difficulties were attributed to them.

López also saw himself forced to bridle the abuses of unions with regard to strikes. As the government was struggling against these openly hostile forces, it found itself confronted by the grave consequences of a crime, allegedly committed by two officials and some agents of the national police in Bogotá, which had a retired boxer and occasional newspaperman, Francisco Pérez, alias Mamatoco, as its victim.

The opposition gave the murder of the Negro boxer the character of a crime committed by the state. The victim seemed to have had some obscure connections with a new group of conspirators which was then being investigated by the police, and on these grounds it was attempted to blame the responsibility for the death of the boxer on the government. Tremendous debates went on in congress. The details of the investigation were used to create scandals. The disclosure of demoralization in certain sections of the police corps created grounds for an attack against the government. The political exploitation of this crime was a masterpiece of propaganda and opposition such as the country had never seen before.

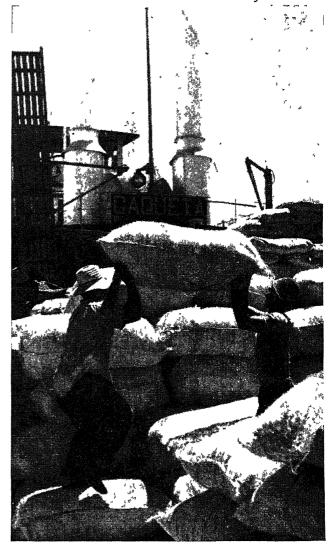

At the same time the president's son Alfonso López Michelsen, a young lawyer, was accused of interfering in affairs thought to be connected with government action. Congress occupied itself with these affairs, in which no proof whatever of any illegal activities could be found But in this atmosphere charged with distrust another supposed scandal was discovered. The government intervened in the conversion of the shares of a Dutch company, held in trust as a result of the invasion of the Low Countries, into shares of a Colombian beer brewery. It was a question of nationalizing these assets. The president informed the cabinet that some members of his family had invested money in the shares of the Dutch company, and that they would consequently profit if the proposed transfer were carried out. The cabinet decided that the action was advantageous to the financial interests of Colombian shareholders. In congress this action of the government was denounced as if the sole object had been to enrich members of the president's family, among them his son who had acted as mediator for transactions regarding Dutch shares, before the presidency of López. As the debate in congress increased in vehemence, the minister for foreign affairs, Gabriel Turbay, resigned, thereby creating a political crisis. The ambassador to Washington, Alberto Lleras Camargo, made a trip to Bogotá, and there the cabinet and the leadership of the Liberal party were restored through his intervention. López, who had some time before announced his wish to resign as president, agreed to continue in the government, but a few days later the grave illness of his wife obliged him to ask permission for a leave of absence. He did so on Nov. 19, 1943, after arranging for very thorough investigations of all the affairs mentioned above. As soon as permission had been granted to him, Vice-President Darío Echandía took over his office.

A section of the Conservative party asked for a truce with the new government. Echandía retained the ministers of López' cabinet. At the end of November a small coastal vessel plying the line between Colombia and its

islands of San Andrés and Providencia was sunk by German submarines. Previously other boats, also small, had been sunk savagely by the guns of German warships and many lives had been lost, but the protests which Colombia made to the reich through the Swiss government had been unanswered.

The government declared war on Germany and the axis countries and the senate, which had to decide on the measure, approved it fully. The Conservatives abstained from voting and were suspicious that the government was trying to obtain political advantages from these events. New security measures were taken, the war budget was increased, the property of German citizens was confiscated to compensate for losses caused by axis action, dangerous Germans were interned and control was established over news of military importance. Colombia undertook naval patrols along its coasts in collaboration with the United States navy, and also facilitated the transfer of U.S. aircraft to the U.S. bases in Brazil. In Jan. 1944, President López, then in Washington, signed the Charter of the United Nations by authority of the government.

Colombian dockworkers unloading bags of cinchona bark used in the manufacture of quinine. Shipments to the U.S. were stepped up during World War II to offset increased demands and a temporary block in other sources of the vital drug

Abortive Revolt.-Political agitation was stirred up again in Feb. 1944 when a judge detained Laureano Gómez for 24 hours while he investigated charges of calumny made against him by the minister of government. While Gómez was being held prisoner, a bomb, which a former member of a religious order had been carrying, exploded at the door of the courthouse, and the author of the attack was killed. A few days later President López returned, but did not resume office. Great public demonstrations asked for his return to the presidency, but he persisted in his intention to retire. So the campaign for the new presidential election got under way, an election which, in the case of López' retirement, was to be held 60 days after the resignation had been accepted. Lleras Restrepo, minister of finance, and Jorge Eliécer Gaitán, minister of labour, resigned from the cabinet in order to become candidates; at the same time the ambassador to Washington, Turbay, returned to explore the situation.

As Echandía was reforming the cabinet, he appointed General Espinel minister of war. Espinel was the foremost military man in the army, and had held high positions for a long time. In the army, subversive propaganda was still on the increase, and officers were holding clandestine meetings. The appointment of Espinel prevented a planned coup, but soon the plans of the conspiratory groups were being renewed. In May the Colombian Workers' federation declared a general strike of a few hours to ask for the return of López to the presidency. Eduardo Santos, president of the Liberal party, made the same request in the name of his followers, as did the parliamentary majority. When congress had been assembled President López presented his resignation, which was not accepted. He resumed his office and presented a program to parliament which included a new constitutional reform and labour and press laws. On July 10, 1944, when López was present at some military manoeuvres in southern Colombia, he was made a prisoner in the city of Pasto by the commander of the zone, who headed a subversive movement designed to set up a military regime in the country. The majority of the forces taking part in the manoeuvres obeyed the leaders of the revolution, who were under the direction of Col. Diógenes Gil. But Darío Echandía assumed the presidency in Bogotá, and with the aid of a group of generals and counting on the loyalty of the other military forces in the country, he succeeded in controlling the situation; at the same time the people rose with the intention of defeating the rebellion. The leaders of the revolution realized that they had failed and, except for the garrisons of Ibagué and Bucaramanga, surrendered to López after setting him free. López returned to Bogotá amid enormous manifestations of popular joy. The supreme court of justice, representing the judicial power, the council of state, the church, industry, banking, commerce, society and the labour unions had shown their loyalty to the civil government, and there did not appear to have been any connection between the military uprising and civilian groups and organizations. When the popular demonstrations started on July 10, Laureano Gómez took refuge in the Brazilian embassy, and left for Quito soon after; he returned in December. The state of siege proclaimed on the morning of July 10 was prolonged for the time in which the trials were held by military courts, and congress, which was to have met on July 20, adjourned itself for an indefinite period of time by majority decision. Because of the state of siege the government issued decrees which had the effectiveness of laws, dealing with labour,

minimum wages, strikes, military organization and the press, decrees which it had announced would be presented to congress as proposed laws.

Those involved in the military uprising were condemned to prison, the longest term being 10 years, with the exception of a captain who had killed the commander of his garrison, Col. Guarín, and was condemned to 25 years in prison.

Normal conditions had been restored by the time congress met on Nov. 10, and the government presented as proposed laws the decrees which it had issued previously. At the same time it insisted on a vast reform of the constitution which affected the judiciary and congress itself.

The promulgation of the decrees on social questions caused a serious disagreement between the parliamentary representatives and Eduardo Santos, who retired from the leadership of the Liberal party and went to the United States. Congress worked energetically, and the new laws were accepted without much opposition on the part of the Conservatives. The proposals for constitutional reform underwent the first regular debate and were then put off pending a second investigation by congress. Both houses were adjourned on Dec. 16, 1944.

They met again in Jan. 1945, called into extraordinary session by the president. In the chamber of representatives the commission, which at the request of the government had investigated the charges made against López by the Conservatives, presented a report invalidating those charges; the report was approved.

Alberto Lleras Camargo, who had been in charge of the ministry of government all this time, was nominated foreign minister and led to Mexico the Colombian delegation which proposed the bases for the Act of Chapultepec, adopted by the Pan American conference. The same minister went to the United Nations conference at San Francisco, at which Colombia distinguished itself through its efforts to consolidate regional organizations, as well as in defending the acceptance of Argentina as one of the United Nations, in opposition to the soviet union.

On March 10 a new subversive plan was discovered; a number of bombs were found in the cathedral of Bogotá. Eight days later the elections to the chamber and the assemblies went off peacefully, and brought a Liberal victory.

The electoral campaign for the presidency was about to begin. Turbay started it by resigning as ambassador to Washington and returning home; at the same time Jorge Eliécer Gaitán began his candidacy, under fire by the Conservatives, with violent attacks against the government, which he called "dictatory oligarchies," making his own slogan the "moral restoration of the Republic." Darío Echandía on the other hand also presented his candidacy, which was upheld by the Liberal groups supporting López and his policy.

In June 1945 the military prisoners who had participated in the conspiracy the year before staged a revolt in Bogotá prison and were subdued after a day of great alarm. Some days later demonstrations of students who called themselves anti-communists gave rise to new troubles which forced the government to issue a declaration saying that the public order had been disturbed, especially as new subversive activities had been discovered at the same time. Congress had been adjourned, but was called together again in June for an extraordinary session; before it President López insisted on his wish to resign his office.

In July 1945 the Liberal convention met and chose Gabriel Turbay as its candidate against the strong opposition of a group of delegates who supported the candida-

ture of Echandía; that group finally withdrew without acknowledging the wishes of the convention.

As soon as President López' decision to retire became known, members of parliament met to study the candidates for vice-president, and on July 27, Alberto Lleras Camargo was elected with the understanding that he would carry on the duties of the president until Aug. 7, 1946. On July 30 López presented his formal abdication which was accepted by the senate on Aug. 2. On Aug. 7 Lleras formally took over the presidency before congress, and made a speech in which he established the bases of agreement between the parties, and promised that the government would remain absolutely neutral in the presidential elections. Echandía, seeing that the Liberal party might loose the reins of government because of the split in its ranks, renounced his candidacy and asked Turbay and Gaitán to do the same. Neither of them agreed to the suggestion.

President Lleras offered the posts of minister of foreign affairs, finance and economy in his cabinet to three well-known Conservatives, who accepted them in spite of the official opposition of their party. A general atmosphere of good will and tranquillity established itself throughout the country. The government presented a law granting amnesty to the officers involved in the revolt at Pasto,

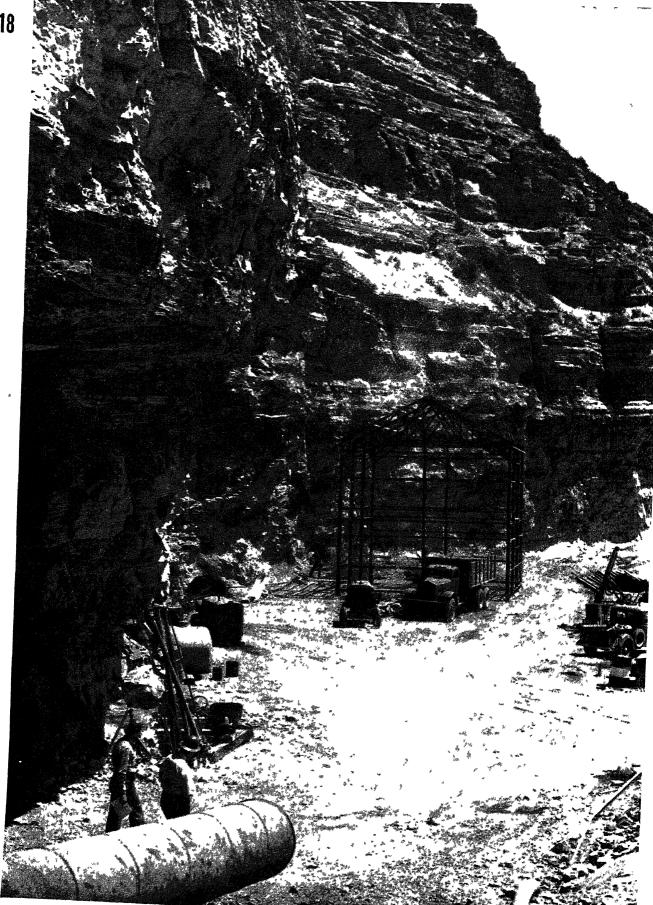

which was accepted after long debates. It also presented proposals for a reorganization of the administration, which, however, were not accepted by the legislature. In the course of the president's attempts to re-establish a normal state of affairs not only in the political, but also in the economic sphere, price control was abolished.

An attempt at a general strike was suppressed by the government without violence but with firmness, and soon thereafter an illegal transportation strike on the Magdalena river was prevented with the general approbation of public opinion.

The presidential campaign was being carried on intensely by the Liberals, and the Conservatives, encouraged by the guarantees given by the government at the elections of municipal councillors in October, decided at last to enter a candidate of their own in the struggle, when the division among the Liberals appeared irreparable, and several attempts had failed to make Turbay and Gaitán withdraw their candidacies.

Ospina's Election.—The presidential election of May 6, 1946, was carried out in complete tranquillity in spite of the vehemence of the campaign. All the parties gave full recognition to the fact that the government had guaran-

teed the exercise of the rights of all citizens and had kept strictest neutrality in the campaign. The three candidates, Turbay, Gaitán and Ospina Pérez, the latter Conservative, addressed themselves to the country from the presidential palace on the eve of the voting, asking their followers to respect the election fully and to abstain from any acts of violence. The results of the elections gave a relative majority to Mariano Ospina Perez, who obtained more than 500,000 votes, about 100,000 more than Turbay, while the smallest number went to Gaitán. The Liberal candidates together nevertheless obtained more than 800,000 votes.

The Liberals accepted their defeat without any intention to refuse recognition to the victory obtained by their adversary. On Aug. 7, 1946, President Ospina took office and set up a government of national union with an equal participation of Liberals and Conservatives in the cabinet and the departmental governments. Ospina Pérez began his term of office with a campaign to reduce the cost of living and to combat inflation. Congress with its Liberal majority offered to co-operate with the president.

Colorado

A Rocky mountain state in the west-central part of the U.S., Colorado is known as the "Centennial state," admitted to the union in 1876. Area 104,247 sq.mi., including 280 sq.mi. of water; mean elevation above sea level, 6,800 ft. Pop. (1940), 1,123,296; 52.6% urban, 47.4% rural; 93.6% native, 6.4% foreign-born; white 98.5%; Negro 1.1%. In 1944 the pop. was est. at 1,147,259. Capital and largest city, Denver (1940 census, 322,412, 1945 est. 392,412). Other cities: Pueblo (52,162); Colorado Springs (36,789); Greeley (15,995), Trinidad, Boulder, Grand Junction and Fort Collins, 12,000 to 15,000.

In 1937 principal state officers were: governor, Teller Ammons; attorney general, Byron G. Rogers; heutenant governor, Frank J. Hayes; secretary of state, George E. Saunders. A congressional appropriation for \$900,000 was approved for the beginning of a power and irrigation project in the state. The project, called the Colorado-Big Thompson Diversion, involved the transfer of water from the western slope through the continental divide onto the plains of northern Colorado.

Before the November election in 1938, the state had been overwhelmingly Democratic. In that election a Republican governor was elected by a plurality of 40,000 votes. The state officers elected were: governor, Ralph L. Carr; lieutenant governor, John C. Vivian; secretary of state, George E. Saunders; auditor, Homer F. Bedford; treasurer, Charles M. Armstrong; attorney general, Byron G. Rogers; superintendent of public instruction, Mrs. Inez Johnson Lewis.

The most important legislative action of the 32nd general assembly in 1939 was the diversion of certain in-

Colorado mountainside, rich in oil shale, where the U.S. bureau of mines began work in 1946 on a demonstration plant designed to serve as a pilot for the mining of shale. Deposits in Colorado, Utah and Wyoming were estimated as sufficient to supply U.S. fuel needs for 68 years

come tax receipts, which formerly were devoted to the school fund, into the state general fund to meet expenditures of the public assistance program. In the presidential election in 1940, tabulation of returns for Colorado showed 278,855 votes for Willkie and 265,364 for Roosevelt.

In the 1942 elections the following state officers were elected: governor, John C. Vivian, heutenant governor, William E. Higby; secretary of state, Walter F. Morrison; auditor, James L. Bradley; treasurer, Leon E. Lavington; attoiney general, Gail L. Ireland, superintendent of public instruction, Mrs. Inez Johnson Lewis. Robert F. Rockwell (Rep.) was re-elected in 1942 as congressman for the fourth district, and Eugene D. Millikin (Rep.), appointed by the governor to succeed Sen. Alva B. Adams until the election, was elected for the remainder of the unexpired term. Chief Justice John C. Young, by right of seniority in office, became chief justice of the state supreme court. Justices William S. Jackson and Frank B. Goudy, previously appointed, were elected to fill out unexpired terms.

In 1943 Walter F. Morrison resigned as secretary of state, and L. J. Bennett was appointed for the unexpired term. In the 1944 state elections John C. Vivian was reelected governor. Other officers chosen were: lieutenant governor, William E. Higby; treasurer, Homer F. Bedford; secretary of state, Walter F. Morrison; auditor, Leon F. Lavington; attorney general, H. Lawrence Hinkley; superintendent of public instruction, Inez Johnson Lewis. Two extra sessions were held by the 34th general assembly during 1944. In the first the election laws were amended to permit servicemen to vote in the general elections, and the second voted down a measure which would prohibit alien Japanese from owning property in the state. In the 1944 presidential election, Dewey received 268,731 votes and Roosevelt 234,331.

The regular 1945 session of the 35th general assembly repealed the state service tax and enacted a budget law for local governments, passed an occupational disease law, established a state institutional board and created a fund of \$100,000 for industrial research. In a special session the state planning commission was authorized to rehabilitate three state institutions, a state aeronautics commission was established and money was appropriated for highway expenditure.

No regular legislative session was held in 1946. In the November elections of that year, the following state offi-

cers were chosen: governor William Lee Knous (Dem); lieutenant governor, Homer Pearson (Rep.); secretary of state, Walter F. Morrison (Rep.); treasurer, H. Rodney Anderson (Rep); auditor, Homer F. Bedford (Dem.); attorney general, H. Lawrence Hinkley (Rep.); superintendent of public schools, Nettie Fried (Rep.); representatives, John A. Carroll (Dem.); William S. Hıll (Rep.); Robert F. Rockwell (Rep.); J. Edgar Chenowith (Rep.).

Columbium

There was no production of columbium ores as such in the United States during 1940–42, though small amounts were recovered as a by-product from tantalum ores, and there had been small outputs previous to 1940. Production in 1943 was only 5,771 lb., declining to 3,208 lb. in 1944 and 1,149 lb. in 1945. Imports, however, were in considerable amounts beginning in 1933. In 1937, imports were 461 short tons, declining to 55 tons in 1939, followed by steady increases to a high of 2,138 tons in 1945.

About 99% of the total imports came from Nigeria, but small shipments were received from South Africa, Uganda, India, Belgian Congo and Brazil.

Although metallic columbium had been on the market for a number of years, with little demand, the first extensive commercial application came in 1933, with the discovery that a small addition of ferrocolumbium to stainless steel was a remedy for intergranular corrosion at high temperatures. Although this use was well developed in prewar years, it found new applications in specific war uses, especially in turbo-superchargers for aeroplane engines, and in gas turbines and jet-propulsion motors.

Comic Strips

The humour of the U.S. comic strip in 1937 was hard to find. Beginning as a simple series of panels, usually four, running lengthwise, telling a simple episode in the life of (usually) some well-meaning, ludicrous-looking simpleton and ending with a "Bam!!!" or "Zowie!!!!" denoting violent, painful or comic frustration, the comic strip by 1937 had undergone a drastic change. The clowns had been pushed off the comic page by the misery-vendors, the horror-vendors, the blood-merchants. The hilarious "Bam!!!" or "Zowie!!!!" ending of the comic simpleton overcome by the brutality, misunderstanding, avariciousness or bad temper of his fellowman, had been supplanted by the "Help!! The rattlesnake is strangling me, Mother, dear!!!"-or-"Take dat, you copper-right t'roo de head!!!" type of ending wherein the comic simpleton was supplanted by a pathetic, golden-haired little girl simpleton or a blue-eyed, white-lipped, red-blooded detective simpleton, whose perils never ended-in fact, increased each day in violence and intricacy.

This was called the suspense ending, a trick borrowed from the oldtime serial movie of the *Perils of Pauline* school. However, whereas in the serial movie, the threats to the life or purity of the hero or heroine were in the final episode happily overcome, the honour of Dick Tracy and Jane Arden of the comic strips was in as much danger in 1946 as it was in 1937. By that time the

comic strips, with a few die-hard, hard-fighting exceptions, were no longer comic.

A few years before, the discovery had been made by Sidney Smith in "The Gumps" and by Vic Forsyte in "Joe Jinks," that if the cartoonist worried a reader half to death about the fate of his favourite comic-strip character, he'd be sure to buy that newspaper the next day to find out what happened. This made for much greater circulation figures than did the comic strip in which the reader left his favourite comic-strip character with a happy carefree laugh and no worries. The word went out from circulation departments that anxiety about the fate of Orphan Annie's dog sold far more papers than did joy over the foolishness of Boob McNutt. Therefore, out of newspapers went the great masters of comedy-Rube Goldberg ("Boob McNutt"), Milt Gross ("Nize Baby"), Maurice Ketten ("Can You Beat It"), Hoban ("Jerry on the Job"), Fred Opper ("Happy Hooligan"). Editors demanded blood, horror, violence, tear-jerking. In came the masters of the suspense comic strip-Harold Gray ("Orphan Annie"), Chester Gould ("Dick Tracy"), Milton Caniff ("Terry" and "Steve Canyon"), Alex Raymond ("Flash Gordon"), Zack Mosely ("Smilin' Jack"), Barrett and Ross ("Jane Arden"), Seigal and Shuster ("Superman"), Darrell Maclure ("Annie Rooney"), Lee Falk ("The Phantom").

A handful of the really comic, comic artists survived, even strengthened their places in public favour, by combining the old humour with the new suspense. Most spectacularly successful was Segar, whose "Thimble Theatre," a joke-a-day strip, became "Popeye," a masterly combination of rough-and-ready gag humour and tongue-in-cheek melodrama, and was during its creator's lifetime the most popular comic strip in the world. On the other hand, Bud Fisher, whose "Mutt and Jeff" was rated as one of the top comic strips for many years, refused to alter his joke-a-day formula and was partially, but not entirely, eclipsed by the blood-and-thunder boys. Chic Young, whose "Blondie" was, in its beginnings, a joke a day about a pretty girl and her beaus, saw the handwriting on the wall and created his own inimitable combination of gags and continued story. "Blondie" still had a joke a day, and very good jokes they were, but there was added a strong background story line-in the day-to-day growth of the children in the strip; the day-to-day change in the type of perplexing domestic, social and financial problems confronting its adult characters; in the continuity of its family and community relationships.

George MacManus ("Bringing up Father"), like Bud Fisher, refused to change his formula but survived. With these few exceptions, however, the trend away from happygo-lucky comedy had by 1937 completely changed the appearance and the flavour of the comic page. The charming if sometimes crude and simple comic drawings of Rube Goldberg and Maurice Ketten were supplanted by realistic illustration, some of it excellent, such as the magnificent pen drawings of Frank Godwin ("Connie"); the brutal power of Chester Gould's drawings for his "Dick Tracy"; the warm realism of Raeburn Van Buren's "Abbie an' Slats"; the superb smashing draftsmanship and lush colour of Milton Caniff.¹

The increasing importance of the comic strip and the increasing publicity given to its financial rewards began, in the late '30s and early '40s, to attract America's top illustrators and writers. Polls began to indicate that comic

strips were not read exclusively by children, that at least half of U.S. adults by 1940 were comic-strip devotees. Advertisers began to discover that comic-strip advertising was more effective than any other type. The U.S. Army War college discovered that the comic strip was a most effective medium of educating soldiers in such various subjects as the perils of venereal disease, the traditions behind and reasons for the military salute, the advantages of voluntary branches of service (such as in the army-distributed "Private Li'l Abner, U.S.A." series issued by the visual-aids section of the Army War college). Newspaper polls indicated that an increasing majority of newspaper readers' selection of newspapers was determined by comic strips. A Boston Globe poll taken of a Boston college early in 1947 showed that the comic page was the deciding factor in the choice of a local newspaper for 93% of those inter-

During World War II, and in the postwar period of 1945-46, comic-strip creators began to realize the power and influence of the comic strip. The daily devotion of 30,000,000-40,000,000 readers which could make a catchphrase in any of the popular comic strips a part of the American language overnight began to be used by comicstrip creators for more socially-conscious purposes. Harold Gray ("Orphan Annie") frequently expressed the political views of his employer, the Chicago Tribune syndicate, via his more attractive characters and the opposing points of view via his more repulsive, unsanitary characters; Milt Caniff had sharp comments on army brass, army red tape, in his wartime strips; Raeburn Van Buren's "Abbie an' Slats" frequently made strong story-pleas for goodwill among men of all faiths; H. T. Webster's cartoons launched a relentless and effective campaign against the overcommercialism of radio and were influential in forcing changes; Seigal and Shuster's hero, "Superman," constantly fought the real-life villain's bigotry, intolerance, racehatred; Crockett Johnson's "Barnaby" poked literate fun at extreme reaction. The comic strip during the decade 1937-46 became, in terms of the constancy of the devotion of its followers, the most popular U.S. entertainment, surpassing radio and the motion picture. Commandos, British

The British commandos were special troops, designed originally to take part in light amphibious raids, who played a dramatic and adventurous role in World War II and whose courage and physical fitness became proverbial. They were first raised when Britain's fortunes were at their lowest cbb; they remained and survived to share in the final victories. After the withdrawal of the British expeditionary force from France in June 1940, the whole attention of the German high command was directed toward the defeat of England. It was clear at that time that if any threat, however slight, could be brought against the long axis front line from Narvik to Biarritz, the Wehrmacht would be forced, in the midst of invasion preparations, to organize some form of a defense system. At the same time, it was vital to maintain the offensive spirit in the British army. Accordingly, in July 1940, the commandos were formed.

The commandos were raised from officers and men in the army who volunteered for independent mobile operations. There were originally ten commando units, each just over 500 strong, organized into a headquarters and

ten troops. Two of the original units were formed from men who had already served in the independent companies. The organization was changed from time to time, as operational experience was gained, and at the end of the war, a commando unit consisted of a headquarters, five troops and a heavy weapons troop, totalling approximately 450 men. In the early days the commandos were not brigaded, and each unit came under the direct orders of the war office; but in Nov. 1940, the commandos were reorganized into the special service brigade. This was commanded and trained until 1942 by Brigadier J. C. Haydon, who laid the foundations of the commandos' successes. He was succeeded by Col. (later Maj. Gen.) R. E. Laycock, appointed chief of combined operations.

At various stages of the war, other specialized units were formed, and became part of the special service brigade. Among these were a special boat section and an Allied commando. The latter unit comprised a British head-quarters, two French troops, one troop each from Poland, Belgium, Norway and Holland, and a troop manned by German and Austrian aliens. In Sept. 1943, the amalgamation of the royal marine division and the special service brigade took place. Finally, in 1944, the commando group emerged.

This formation, approximately half army and half royal marines, consisted of a group headquarters, four commando brigades, a holding commando, an engineer commando, a commando basic training centre and a commando mountain warfare training centre. The last-named establishment trained men in the technique of cliff assaults, and rock and surf landings.

The commandos took part in every major operation from their inception till the end of the war. In the earlier days they were employed in small raids, carried out by individual troops, although there were several occasions on which complete units were involved. Examples of these were Vaagsö, St. Nazaire, Dieppe, North Africa, Madagascar, the middle east, including Crete and Syria, and the invasion of Sicily and Italy.

Further operations were undertaken by the commandos in the invasion of Normandy; two special service brigades landed on the first day. The 1st brigade operated with the 6th air-borne division on the left flank of the beachhead, and subsequently assumed a mobile role when the advance inland began. Later, in Jan. 1945, the brigade took a leading part in the crossing of the rivers Rhine, Weser, Aler and Elbe. The 4th brigade fought in several operations, including the capture of Port-en-Bessin, but did not fight as a brigade till six days after the initial landing. Subsequently, it took part in the pursuit to the Seine, was concerned in the capture of Le Havre, invested Dunkirk and played a prominent part in the capture of Walcheren. At the same time, two other brigades were on active service, one in Italy and the other in southeast Asia. In the far east, the 3rd commando brigade helped in the capture of Akyab, took the Myebon peninsula and, at Kangaw, bore the brunt of the decisive battle for

Some indication of the worth of the commandos may be gathered from the fact that, out of 178 V.C.'s won during the war, no fewer than 7 were awarded to commandos. Of these, perhaps the two most notable recipients were: Lt. Col. Geoffrey Keyes, V.C., who received his decoration posthumously for leading the famous raid on Field Marshal Rommel's headquarters in North Africa in Nov. 1941; and Lt. Col. A. C. Newman, V.C., who com-

manded the troops in the St. Nazaire operation earlier in the same year. (See also Tactics of World War II; World War II.)

Commission on a Just and Durable Peace

The Commission on a Just and Durable Peace was instituted by the Federal Council of the Churches of Christ in America in Dec. 1940, as a means to focus the efforts of Protestant and Orthodox churchmen in the United States on critical emerging issues of world order. The commission's Committee of Direction, under the chairmanship of John Foster Dulles, was elected by the council in March 1941, and five interdenominational bodies were invited to appoint representatives to the commission. A series of studies was initiated, leading to the formulation of 12 "Guiding Principles" and the calling of a National Study Conference on the Churches and World Order at Delaware, O., in April 1942.

On the basis of the "Guiding Principles" and the Delaware conference findings, the commission prepared in the spring of 1943 a statement of political propositions, known as the "Six Pillars of Peace." This statement, which called for international organization to provide for the "continued collaboration of the United Nations," laid the groundwork for an intensive educational campaign in the churches under the sponsorship of the commission.

A second National Study conference was convened at Cleveland, O., in Jan. 1945, at which representative leaders of the Protestant and Orthodox communions agreed upon nine constructive recommendations for the improvement of the Dumbarton Oaks proposals. These recommendations were studied widely, and the majority were incorporated in substance in the charter of the United Nations.

In Nov. 1945, the commission met to formulate a general postwar strategy for the churches, entitled "Christian Action on Four Fronts for Peace." The commission was subsequently asked to do the preparatory work for a special statement entitled "The Churches and World Order." adopted by the Federal Council of Churches in March 1946, and for the first international church conference on world order after the end of World War II, held at Cambridge, England, in Aug. 1946. (Ri. M. F.)

Committee for Economic Development

The Committee for Economic Development was organized in Sept. 1942, by a group of U.S. business leaders who recognized that the maintaining of high employment would be a critical peacetime problem; that large-scale unemployment would carry hazards for democracy and for a free enterprise economy.

They were convinced that the continuance of high employment after World War II could not and need not be left to chance. They foresaw an opportunity to achieve unprecedented peacetime prosperity if business were ready

to swing rapidly to peacetime production at the war's end and the government were prepared with policies and measures that would assist the reconversion and contribute to maintaining high production.

A plan was drawn up, therefore, with two major objectives: (1) To help businessmen plan for quick reconversion and expanding production, distribution and employment after victory, and (2) through objective research help determine business and public policies that would contribute to the attainment and maintenance of high production and employment.

To carry out the first assignment, a Field Development division was organized. Local C.E.D. committees were set up in communities of 10,000 and over, and in many smaller places. A total of some 2,000 committees, with more than 70,000 businessmen serving in the local groups, worked at the task of contacting the nation's industrial and business employers, from the corner grocers to the largest manufacturers. They took to these employers carefully documented information indicating what postwar markets offered for production and jobs.

To aid business in planning expanded production and employment at the end of the war—a date that was to prove to be three years' distant—specialists in industrial management, in product design, in advertising and selling, and in training of sales personnel prepared handbooks, films, training courses, business clinics, and through these placed their skills, without cost, at the service of all co-operating businessmen.

At V-J day, against the rising tide of predictions of "8,000,000 to 10,000,000 unemployed by Christmas," the C.E.D. announced—on the basis of local reports from every part of the country—that there would be no serious unemployment in the first year of peace. The ensuing months bore out this statement. Its wartime "plan jobs" assignment concluded, the Field Development division was discontinued early in 1946.

On its assignment of determining the economic policies that would contribute to high employment, ten research studies and three supplementary research papers had been completed by independent economists for the research division late in 1946. Of the ten studies, five dealt with transition period problems; as follows: liquidation of war production, demobilization of wartime economic controls, providing for unemployed workers in the transition period, financing of business during the transition, and jobs and markets.

The other five previously issued considered the longer range problems: production, jobs and taxes, postwar taxation and economic progress, international trade and domestic employment, agriculture in an unstable economy, and control of world trade—cartels and commodity agreements.

Ten policy statements stemming from these studies were issued by the Research and Policy committee of businessmen, as follows:

Postwar Employment and the Settlement of Terminated War Contracts (Oct. 1943).

Postwar Employment and the Liquidation of War Produc-

tion (July 1944). Postwar Federal Tax Plan for High Employment (Sept.

1944).
Postwar Employment and the Removal of Wartime Controls

(April 1945).
International Trade; Foreign Investment and Domestic Em-

ployment (May 1945).
The Problem of Changeover Unemployment (Aug. 1945).
Toward More Production, More Jobs and More Freedom (Nov. 1945).

Agriculture in An Expanding Economy (Dec. 1945). The End of Price Control—How and When? (April 1946). Fiscal Policy to Fight Inflation (Sept. 1946). Until sound policies became a part of the day-to-day thinking of the groups and the individuals concerned, they were of little practical purport. Recognizing this, the C.E.D. board of trustees in 1946 was increased to include 100 leading businessmen and educators from all parts of the country. A national C.E.D. Information committee was authorized to carry forward an educational program through membership and local C.E.D. Advisory councils and through the daily press and periodicals. Every effort was to be made to provide the interested citizen with the findings and recommendations stemming from the C.E.D. research program.

Studies under way at the end of 1946 included such major problems as fiscal and monetary policy to combat inflation; practices and policies in labour-management relationships to foster increasing productivity and industrial peace; and ways of strengthening the small business sector in the economy.

The businessmen heading the various divisions of C.E.D work at the end of 1946 were Paul G. Hoffman, president, Studebaker corporation, chairman of C.E.D.; Ralph E. Flanders, chairman of the board, Jones & Lamson Machine company, chairman of C.E.D. Research division; Walter D. Fuller, president, Curtis Publishing company, chairman, Information division; Marion B. Folsom, treasurer, Eastman Kodak company, chairman of Field Development division, later succeeded by Walter D. Fuller.

The C.E.D., a private, nonprofit, nonpolitical association with headquarters in New York city, continued to be supported by contributions from businessmen throughout the country.

(P. G. H.)

Commodity Credit Corporation

During the ten years 1937–46 the Commodity Credit corporation was the United States government agency which financed the prewar stock-piling of agricultural commodities, the wartime expansion of food production and the immediate postwar acquisition of food and fibres for export to Europe and Asia.

The CCC was created in 1933 to make commodity loans to farmers in helping stabilize the prices of farm products. In 1938 its activities were integrated with domestic agricultural adjustment and conservation programs. In 1941 the corporation undertook (1) to stimulate the wartime production of farm products by guaranteeing minimum prices to farmers in consideration for increased production, and (2) to finance through a revolving fund the purchase of agricultural products for lend-lease to Great Britain and its war Allies.

A large wartime expansion was promoted in U.S. production of crops and livestock products—vegetable oils, meats, milk, dry beans and eggs. The volume of agricultural food production was increased in 1941 to 115% of the 1935–39 prewar average; in 1942 the total was 125% of the prewar average. In addition, large quantities of foreign agricultural commodities, principally vegetable oils and oil-bearing seeds from Latin America, were bought by CCC to supplement domestic supplies and exports of food to war allies.

These wartime programs of the CCC were integrated with domestic price stabilization designed to hold down the cost of living and the cost of the war. Where the support prices to farmers (to encourage increased production) exceeded the ceiling prices established by the federal government, the differences were paid as subsidies to proc-

essors and dealers. Special payments were also made direct to dairy farmers to help offset their increased production costs. Government supplies of feed wheat were sold to farmers, below cost, to stimulate the production of livestock products beyond the availability of feed grains.

Continuing emphasis was put upon greater agricultural production and the output of food increased despite the wartime restrictions that had been placed upon the manufacture of agricultural machinery and the marked wartime reduction made in the number of farm workers. Outstanding were the increases in production of meats, milk, eggs and vegetable oils. In 1943 the total production of food was increased to 133% of the prewar average. In 1944 the volume was increased to 138% and in 1945, the last year of the war, the production volume was maintained at 137% of the prewar average.

During the World War II period, CCC purchases of commodities for lend-lease totalled nearly \$6,000,000,000. Subsidy payments to stimulate agricultural production totalled \$1,380,600,000. Loans to farmers on crops during this four-year period totalled approximately \$2,467,000,000. To engage in these large operations, the CCC was continued and its borrowing power increased from time to time from \$1,400,000,000 in 1940 to \$4,750,000,000 in 1945.

Anticipating the problems of postwar agricultural adjustment to peacetime needs, the congress had also authorized the CCC to support at specified rates the farm prices of basic and nonbasic commodities for two years after the war. Subsidy programs also were continued, but on a reduced scale in 1946. To meet immediate postwar domestic and foreign needs for food, the agricultural production volume was maintained in 1946 at approximately 133% of the prewar level.

In 1946 the corporation supported postwar prices to farmers through commodity loans and purchases and continued financial assistance in the stabilization of food prices. After 1933 the corporation loans to farmers had totalled approximately \$5,000,000,000, of which \$100,000,000 was outstanding on June 30, 1946. On that date the corporation owned commodities valued at about \$500,000,000.

Communism

Communism, or revolutionary Marxism, is a system of government and a totalitarian way of life evolved under the leadership of Nicolai Lenin and Joseph Stalin in the soviet union, the former Russian empire. Under Lenin it originally regarded the Russian revolution only as the starting point for a communist world revolution. But the failure of the world proletariat to follow Moscow's call in the years after 1917 led to a change of emphasis and direction in communism under Stalin. Much greater stress was put on Russia as the only genuine leader and representative of communism. Thus the movement presented during

the ten eventful years, 1937-46, an amalgam of Lenin's world revolutionary communism with the historical traditions and aspirations of the Russian empire and of the Russian people. Communism had shown itself the new form in which these aspirations had vitalized and organized the masses of the empire to active participation. Within this framework communist policy underwent several fundamental and sometimes sudden changes during the ten eventful years, according to the true or supposed needs of communist success and Russian interests. The flexibility of soviet policy was perhaps enhanced by the ruthless 'purges" of 1936-38, in which Stalin eliminated all those persons, many of them among the oldest and most renowned communists and closest collaborators of Lenin, who could endanger his undisputed and unquestioned leadership. In this process several hundred thousand communists and leading personalities of the political, economic and military life of the soviet union were "liquidated" as "traitors" or "enemies of the people."

This flexibility in policy, though not in communist principles, methods or goals, showed itself in the sudden change of the "general line" in Aug. 1939 when the soviet union abandoned the principle of collaboration with the democratic nations in the struggle against fascism, and lined up side by side with aggressive fascism, which communists had proclaimed until then the mortal enemy of the proletariat, of peace and progress. Until June 1941, communists everywhere played a rather ambiguous role; nevertheless they directed all their main attacks against democracy, against Great Britain's efforts to resist fascist aggression, and against the defense program of other democracies, including the United States, to prepare themselves against fascist aggression. Communist parties throughout the world adapted themselves to the new line in complete disregard of the national interests of the country in which they were living. The parties in France and Great Britain vilified and tried to hinder the war efforts of their countries in the fight against fascist aggression. The French government had to dissolve the French Communist party under the leadership of Maurice Thorez, who deserted the French army and fled to Russia. The British government did not take any special measures against the rather unimportant party in Britain but had to suspend publication of the Daily Worker on Jan. 21, 1941, because it systematically published matter "calculated to foment opposition to the prosecution of the war to a successful issue."

In the U.S. the Communist party from Aug. 1939 to June 1941 was one of the chief agents against help to the democracies resisting fascist aggression and against America's preparation for the eventuality of war. In 1939 Earl Browder, general secretary of the party, claimed for it a membership of 100,000, of whom one-third resided in New York state. In the U.S. national elections of Nov. 1940, Browder was the party's presidential candidate and James W. Ford, a Negro leader from New York, ran for vicepresident. They polled 48,789 votes (as against 80,159 in 1936 and 102,991 in 1932). But the party was barred in some important states (New York and Illinois) from the polls and failed in others, such as Ohio, to qualify by securing the required number of petitions. The largest number of votes went to communist candidates in California (13,586), New Jersey (8,814) and Pennsylvania (4,519).

The attitude of sympathy toward Germany and of obstruction to the fight against fascism changed completely with the German attack on the soviet union on June 22, 1941. The shift in communist policy, both in the soviet union and abroad, was as sudden and complete as it had

been in Aug. 1939. The soviet union resisted with utmost heroism and bitterness the German onslaught and, as a result of 25 years, of psychological and material preparation for war, showed itself much better prepared than many observers had believed possible. Marshal Stalin, in his speech of July 3, 1941, after rather futile and unconvincing efforts to defend the policy of isolationism and neutrality, proclaimed that "our war for the freedom of our country will merge with the struggle of the peoples of Europe and America (the United States was not yet at war) for their independence, for democratic liberties."

The German government tried to proclaim its war for the conquest of eastern Europe a crusade on behalf of European civilization and of Christianity against a godless and barbaric communism. Hitler's interpretation of his war against the U.S.S.R., after his two years of studied silence about the dangers of communism and of emphasized friendliness toward the soviet union, was repudiated everywhere. The democracies, though maintaining their uncompromising antagonism to communism, regarded the people and the armies of the soviet union as united with them in a common effort to defend all peoples against subjugation by Germany and Japan and inclusion into the National Socialist world order.

With the existence of the soviet union at stake, communists everywhere suddenly saw the war in an entirely different light and became the most determined proponents of relentless war against Germany. This attitude culminated in their propaganda for a second front in western Europe to relieve the pressure on the soviet union, irrespective of the state of preparation of the democracies for such an unprecedented invasion and of their involvement and obligations elsewhere. As the soviet union was at peace with Japan, no demand was raised by communists anywhere (outside China) for a fight against Japanese fascism. All considerations centred for the communists around the national existence and interests of the soviet union, not around any principle of an international struggle against fascism. The love of the soviet union and the admiration for its system inspired not only the Russian people but communists everywhere, especially in the occupied countries of Europe, to heroic resistance.

Shift to Nationalism.—In the soviet union the national patriotic trend which had been visible already in the preceding years became more and more pronounced. Stalin himself took the lead in a message to the Russian people on July 30, 1942. He called upon them to be inspired in this war by "the daring spirit of our great ancestors," and he set as examples heroes of Russia's feudal past, like Alexander Nevsky, who defeated the Teutonic knights in 1242 and was canonized by the Orthodox church; Dmitri Donskoi, who annexed Rostov to Russia in 1380; Prince Pojarsky, who drove the Poles out of Moscow in 1612 and set the Romanoff dynasty on the Russian throne; General Suvorov, who led the Tsar's armies victoriously in the second half of the 18th century; and General Kutusov, who defeated Napoleon. This invocation of the heroic past filled the soviet youth with a deeply national spirit, fundamentally different from the international proletarian spirit prevailing in the first years of the Russian revolution, in which the whole Russian past had been viewed with indifference and even hostility. Heroes of past Russian wars were as much celebrated as the soldiers and guerrillas of World War II. Literature and the theatre, the movies, radio, sculpture and music celebrated them. Kosta Simonov glorified them in his melodrama The Russian People; Dmitri Shostakovich wrote in their spirit his seventh symphony, Serge Prokofiev his Symphonic Suite 1941

and his opera War and Peace, Ivan Dzerzhinsky his opera Blood of the People, and Victor Byely the choral music of "Song of Wrath." Even such tyrants as Tsar Ivan the Terrible became figures of official adulation. It was a strange fact that in spite of his tyranny, Ivan was presented as a favourite of the Russian masses. In 1944 Alexei Tolstoy, the greatest Russian writer of the period, presented two plays of the life and times of Ivan the Terrible; and Sergei Eisenstein, the most prominent Russian motionpicture director, staged a lavish film on the life and historical role of the tsar. Much publicity was devoted to inculcating in the Russian masses appreciation of this ruthless but highly successful Russian ruler, one of the greatest empire builders of all times, who pushed the Russian frontiers far east into Siberia and west to the Baltic sea. It was characteristic that in the play as well as in the motion picture Ivan's religious fervours were treated with utmost respect and that church music played a great part in Eisenstein's film.

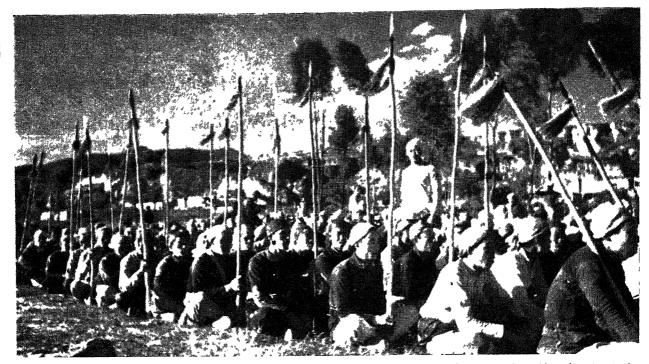

National achievement replaced class origin as the basis for evaluation of figures and movements of the Russian past. The young guerrilla heroine-martyr Zoya Kosmodemyanskaya, an 18-year-old girl, venerated by the soviet youth, had studied Ilya Muromets and other ancient heroes of Russian ballads as her inspiration.

As the communist government mobilized the forces of nationalism for its purpose, so it mobilized also the religious and patriotic feeling of the Russian church. Although religious worship had not been forbidden formerly, religious education was strictly prohibited and the soviet government officially sponsored a violent antireligious propaganda. Now this propaganda of the "Union of the Godless" ceased, its publications disappeared, the clergy received civil rights, and the role of religion in the history of the Russian nation was appraised positively.

In Sept. 1943, the Russian Orthodox Church was officially recognized. Metropolitan Sergei of Moscow returned to Moscow from his semi-exile in a special train and was received by Stalin together with other high church digni-

Communist campaign poster in Tokyo prior to the parliamentary elections of April 10, 1946. Five communists won seats, including two of the party's leaders

Chinese communists at a base in northern China listening to instructions from one of their officers during 1945. Troops of this unit wore no regular uniforms and were armed with iron-tipped spears

taries on Sept. 4. The next day all Russian newspapers gave front page prominence to the announcement that the government would place no obstacle in the way of a permanent organization of the church under a patriarch of all Russia and of a re-established Holy Synod. Consequently Sergei was elected patriarch of all Russia and was installed on Sept. 12 in a brilliant ceremony in Moscow cathedral. All metropolitans and bishops of the Orthodox Church participated in the ceremony. The patriarch assured the government of the full support of the Russian Church for the war effort. This reconciliation of the Stalinist state with the Orthodox Church was only one of the many indications that the new Russia fully accepted and revalued all the Russian national and imperial traditions of the past. Seminaries for priests were opened; the Russian interests in Orthodox religious property in Jerusalem were stressed. Orthodox priests were allowed to carry on proselytizing work both in churches and outside, and when Patriarch Sergei died in May 1944, his successor Alexei, the metropolitan of Leningrad and Novgorod, praised Stalin as "a wise leader, placed by the Lord over our great nation."

At the beginning of Feb. 1945, Alexei was crowned Russian patriarch. Under his leadership the church collaborated closely with the Russian government and with the government council for Orthodox Church affairs whose chairman was George Karpov, a high communist official. All churches were ordered to offer prayers "for the health and well-being of the God-sent leader of the peoples of our Christ-loving nation." All Orthodox churches everywhere were to be united under the leadership of Moscow. The patriarch himself, at whose coronation the patriarchs of Alexandria, Antioch and Georgia participated. visited the near east-Damascus, Jerusalem and Alexandria -to renew the ties which had existed in the time of tsarist Russia. Orthodox churches which had split away from the Moscow patriarchate abroad were warned to re-enter. The metropolitan council of the Russian Orthodox Church in the U.S. refused to accept the conditions laid down by the patriarch for reunion, because they suggested "the high handed methods of an autocratic bureaucracy." The Russian Orthodox Church in the U.S. was to continue as a U.S. church and therefore was obliged to reject the patriarch's demand to express loyalty to the soviet government.

The revival of Russian traditionalism and the new emphasis on Russian nationalism, determined also the transformation of the communist army, diplomatic service and educational system. The change from the revolutionary attitude of Leninism to the emphasis on tradition was complete in all these fields. Stalin, who a few years ago had been simply Comrade Stalin, assumed the title of marshal and later generalissimo, and dressed in a new ornate marshal's uniform. The Russian army tried to build up a strong traditional sense in the army officer corps. General, of the tsarist past, and great tsars themselves were held up as examples. There was no stress put on revolutionary or working class heroes. The officers received back their massive gold shoulder epaulets of tsarist time, distinguishing them more clearly from the rank and file than even in the democratic armies, and generals wore again the striking red stripes on the sides of their trousers. Military discipline was strictly enforced, and the standard of saluting in the Red army was unusually high. The former system of orderlies for officers was re-introduced, to take care of the officers' personal affairs, food, clothing and boots.

These changes in the army were paralleled by changes in the diplomatic service. Communist diplomats formerly appeared in simple dress. In 1943 they received ornate gold-brocaded uniforms which they wore at the 26th anniversary celebration of the communist revolution. The new splendid formal attire again stressed the resemblance with tsarist days. In the field of education, coeducation was abolished in secondary and elementary schools, to take into account the different nature of the two sexes; the boys were to be trained for a stern soldier's life while the girls were regarded essentially as the future mothers. Mili-

tary experts were to conduct drills for the premilitary age in the schools, and the teaching of Russian history and strict discipline of conduct were to be emphasized. This new stress on the difference of the sexes, on motherhood, family and authority, was again a complete departure from the original communist attitude.

There was also an official revival of the expansionist ideas dominating the Russian empire of the tsars, including pan-Slavism. An all-Slav committee was formed in Moscow and held its third meeting on May 9, 1943, with delegates of all Slav peoples participating. From Moscow, all Slavs were summoned to the fight of Slavdom against the Germans. A new monthly called Slavyane or Slavs began its publication in Jan. 1943.

With this new emphasis on Russian traditional nationalism went a stricter application of the authority of the family. Already in 1936 allowances for large families had been introduced, abortion abolished and divorce made more difficult. By the laws of July 8, 1944, this trend was confirmed. To encourage a high birth rate, a "mother-hood medal" and an "order of glorious motherhood" were newly created, and the title of Mother Heroine was introduced. Unmarried women were to get special allowances for their first child, married women much larger allowances for their fourth and all subsequent children. Birth control was no longer even mentioned, and higher taxes were levied on childless persons. Though divorce was still legally allowed, it was made much more difficult and more expensive. Both parties had to appear and to argue

British communists painting a huge propaganda poster in London during 1942, showing Hitler fighting the Russian bear as the English bulldag strained at the leash. The slogan read "Let Go That Chain" before courts. If the lower court did not succeed in reconciling the couple and believed that there were sufficient reasons for divorce, it passed the case on to a superior court which alone could decide. These financial and legal difficulties made divorce practically prohibitive except for the wealthiest and most patient persons. All free love or common law marriage was sternly discouraged.

The trend toward nationalism was further evident in the dissolution, on May 22, 1943. of the Communist International (Comintern), founded by Lenin in 1919.

The Communist parties outside the soviet union followed a similar "nationalist" or "patriotic" line, at least as long as that seemed advantageous for the co-operation of their country with the soviet union. On May 22, 1944, the U.S. Communist party became a Communist Political association, with Earl Browder as its first president who, in addressing the convention, used the greeting "ladies and gentlemen" instead of the former official "comrades." The resolutions adopted deprecated class war and stressed national unity. All strikes in wartime were violently opposed; during the elections the Communists supported President F. D. Roosevelt. They affirmed their willingness to work within the traditional U.S. system of two parties and free enterprise. The Young Communist league transformed itself in Oct. 1943 into the American Youth for Democracy and tried to enlist U.S. college youth for soviet "democracy." In France communist leader Maurice Thorez returned home from exile in Moscow after a general pardon for military desertion and exhorted the

Earl Browder greeting delegates to the Communist party convention in New York city, May 20—22, 1944. Delegates voted to dissolve the party but re-formed into the Communist Political association. In July 1945, however, the association voted unanimously to disband and reorganize once more as the U.S. Communist party

French people to think of nothing but the successful prosecution of the war and the creation of a strong French army. In Italy and in Rumania the communist leaders supported, in the interests of the war, national unity and the monarchy, and were willing to serve under conservative leadership. On the other hand, in Yugoslavia, the communist-inspired movement of Marshal Tito began to dominate more and more the political scene and to assume the leadership of the nation. In China the central government under Generalissimo Chiang Kai-shek and the Chinese communists under Mao Tze-tung could not reach a common agreement in spite of the fact that Americans, especially Major Gen. Patrick J. Hurley, then U.S. ambassador to China, tried several times to press for such an agreement. The communists were ready for an agreement in the interests of a vigorous prosecution of the war against Japan, provided that the government in Chungking would abandon the one-party system. It is interesting to note that while the communists in Russia maintained a strict one-party rule, they seemed to favour democracy outside Russia and demanded from Chiang Kaishek the abandonment of a policy followed much more consistently and ruthlessly by communists in Russia.

The end of World War II brought a new emphasis on Russian history, as evidenced by Stalin's victory address to the Russian people on Sept. 2, 1945, after the conclusion of the brief war against Japan. Russia's participation of only a few days brought her vast strategic and economic gains and restored the pre-1904 position of tsarist Russia. In that address Marshal Stalin declared: "The defeat of Russian troops in 1904 in the period of the Russo-Japanese war left grave memories in the minds of our peoples. It was as a dark stain on our country. Our peoples trusted and awaited the day when Japan would be routed and the stain wiped out. For 40 years have we, men of the older generation, waited for this generation, for this day. And now this day has come."

This statement was the more surprising because Russian socialists had always condemned the Russo-Japanese war of 1904 as a wanton act of Russian imperial aggression which had paved the way for the Russian revolution of 1905. This attitude against far eastern Russian imperialism was firmly held by the communists until World War II. The History of the U.S.S.R., a high school textbook published by the Institute for History of the Academy of Sciences of the U.S.S.R. in its 1941 edition described the war as "predatory," and declared that Lenin had worked for a tsarist defeat. "In one of his leaflets against the war Comrade Stalin wrote about the necessity of defeat: 'Let us wish that this war will become a still greater disaster for the tsarist regime than was the Crimean war. . . . Then serfdom was ended. Now, as a consequence of this war, we will bury the child of serfdom, the tsarist regime with its stinking secret police and gendarmes."

An assembly of priests of the Uniate Church of the western Ukraine delved even farther back into the 16th century to justify communist policies. In a letter to Marshal Stalin in March 1946 they wrote: "Three hundred fifty years ago the imperialist Poland of the gentry, striving to increase their enslavement of Ukrainian land that had been forcibly separated from their mother country, also broke the religious and church unity of those lands with the East of the same race and religion with the help of proud and power-loving Rome, which had always dreamt of its own dictatorship in the Christian world." Then when under Stalin's leadership the Red army had conquered all the Ukrainian lands, the assembly decided to abolish the union with the Vatican and to return "to the bosom of the Holy Orthodox Church."

Return to Marxism and Leninism.—In spite of this emphasis on the Russian past, which had been found most helpful during World War II, the Communist party in Russia at the end of the war called for a new devotion to the Marxist-Leninist doctrine. The party had grown to a membership of 5,800,000 by April 1945, as compared with about 3,500,000 in 1940. Most of these new members who came from the Red army were not sufficiently prepared in Marxist theory, and the old party members had by necessity neglected indoctrination during the war. The war had at the same time resulted in a growing contact with the outside world and its ideas which made the development of "deviations" or "heresies" within the party possible.

This shift to a new emphasis on party ideology made itself felt also in the Communist party of the U.S. The April 1945 issue of *Cahiers de Communisme*, the official organ of the French Communist party, published an article by the party secretary, Jacques Duclos, against the

"rightist" deviation of the U.S. communists under the leadership of Earl Browder. Browder, after the conference of Tehran, had abandoned class war and came out for collaboration with progressive capitalism, forming a broad national unity in the U.S. The 7,600-word article with its bitter attacks upon Browder and the policy of U.S. communism, which was accused of having "swerved dangerously from the victorious Marxist-Leninist doctrine," was reprinted in The Daily Worker by Browder, its editor, and became immediately the guiding principle of communist policy in the U.S., which made a sharp and abrupt turn back to class war. The Communist party was reconstructed, Browder was stripped of his authority and replaced by William Z. Foster as the new leader of the party. A special convention at the end of July unanimously endorsed the new leftward trend. The April issue of Cahiers de Communisme had declared: "Today as in the past, the ultimate goal of the communists is the same.'

This reversal of Browder's policy and the return to the former irreconcilable militancy revived all the former slogans. Thus Benjamin J. Davis, Jr., communist member of the New York city council, wrote in *The Daily Worker* that under Browder's influence he had misinterpreted the party's policy for the American Negroes. The former official communist policy was now revived; it demanded that in the so-called "Black Belt" Negroes should be given complete right of self-determination and even the right of secession from the U.S.

In Jan. 1946 Browder, who formerly had been enthusiastically and unanimously regarded as the great leader and the shining symbol of American communism, was expelled from the party. The party was called to a pitiless struggle against Browder and Browderism.

The events of 1945 and 1946 did not establish clearly how far communism was sweeping Europe. In many European countries communists formed part of government coalitions and held important positions in the cabinets. The governments of Poland, Yugoslavia, Rumania and Bulgaria were controlled by communists and no opposition to the governments in power was allowed, though it is very doubtful how far the communists and their policies were approved by the people. Communists made a very good showing at free elections in Czechoslovakia and France, though they did not achieve a majority; in other countries with free elections they increased their vote without, however, becoming an important element (Norway, Denmark, Netherlands, Belgium); while in such countries as Great Britain and Austria they made a surprisingly weak showing. In Germany the communists were officially supported in the Russian occupied zone and formed there a unity movement with the social democrats. Interestingly enough, their main slogan was a chauvinistic insistence on German centralized unity so that they became the foremost spokesmen of a renewal of German greatness. They also frankly accepted many former national socialists into their ranks, the "repentant nazis," and sought the closest collaboration with men in the German arts, letters and sciences in spite of their former affiliation with activities under the third reich.

The chaos which resulted from the sudden collapse of Japan's far-flung armies in Asia seemed to facilitate the growth of communist influence. It played an important role in the nationalist and agrarian movements in the Philippine Islands, in Indonesia, in Indo-China and in Burma. In China the powerful Communist party, which maintained its own large armies and controlled from Yenan vast parts of China, opposed the legitimate government of the Chinese republic, which was recognized by

the U.S., the U.S.S.R. and the United Nations. The Chinese government objected to the existence of an armed faction in the country which threatened the nation with a civil war. The most important bone of contention was the control of Manchuria, whose conquest by Japan in 1931 had started the wave of aggression and whose resources made it the most important part of the far east—the only one which could serve as a base for large scale industrialization. Under these conditions the Chinese government did not wish to lose Manchuria, over which it had been at war with Japan for so many years.

In Latin America the Communist parties were exceedingly well organized and followed inflexibly the Moscow line. After the end of World War II they revived all the old slogans against "war-mongering Yankee imperi-They had become especially strong in Chile, where they gained control over the workers in the vital shipping and mining industries; in Brazil, where their leader Luis Carlos Prestes came to the fore in 1946 and where their candidate in the presidential elections of 1945 received 600,000 votes; in Cuba, where they demanded above all the evacuation of the U.S. bases there; and in Mexico, where the C.T.M. (Confederacion de Trabajadores Mexicanos) was under the leadership of Vicente Lombardo Toledano, who also created in 1938 the Union of Latin America Workers (C.T.A.L. or Confederacion de Trabajadores de America Latina).

An important advance in communist influence in the international labour movement was achieved with the formation of the new World Federation of Trade Unions (q.v.), in Paris, France, in the fall of 1945. The International Federation of Trade Unions, which had been founded in 1901 and reconstituted in 1919, and did not admit communist and Russian trade unions, was dissolved. Its place was taken by the new organization in which the Russian trade unions participated and where many other national trade unions showed a strong communist influence. President of the new organization was Sir Walter Citrine (Great Britain) while its general secretary was Louis Saillant, a French trade unionist with communist leanings. Of the U.S. trade unions, the American Federation of Labor refused to join the new body, while the Congress of Industrial Organizations under Sidney Hillman took a very active part in its organization. Community Chest

The ten years 1937-46 were years of important growth for the community chest and united community planning,

budgeting and fund-raising for local health and welfare services. This growth was marked by a notable increase in numbers of chests and amounts raised, and a parallel advance in fundamental thought underlying federated planning and financing of health and welfare services. The accompanying table shows the expansion in terms of numbers of chests and amounts raised during the decade 1937–46.

Funds Raised by All Recorded U.S. Chest Campaigns, 1937-46

Year													Number of campaigns	Amount
1937													452	\$ 81,707,787
1938													475	83,898,234
1939													523	82,771,362
1940													561	86,297,068
1941					٠								598	90,379,099
1942													632	104,575,890
1943													649	162,334,486
1944					٠								703	210,41 5, 18 7
1945													<i>7</i> 72	221,272,950
1946	٠	•	•			٠		•	•	٠			798	197,048,839

The community chest idea gained great impetus during World War I, when war chests were created throughout the United States to raise huge sums for human needs in the United States and overseas. In 1918 a small group of local leaders, foreseeing that the effectiveness and economy of united campaigns would appeal to the people of the United States in peace as in war, organized their national association, Community Chests and Councils, Inc., to be a clearinghouse of information, ideas and services to local chests and councils of social agencies, and to serve as their spokesman among other national bodies.

From 1932 until the organization of the National War fund in 1942, Community Chests and Councils, Inc., conducted an annual Mobilization for Human Needs. This was not to raise money nationally, but to focus attention on local chest campaigns throughout the nation and inspire people to support them.

With the outbreak of World War II in Europe, the number of appeals for war relief funds increased rapidly, and it became evident that something should be done in the way of united planning, budgeting and money raising. In 1942 a three-way co-operative agreement with respect to the support of local campaigns was worked out between Community Chests and Councils, Inc., the United Nations Relief committee of the American Federation of Labor and the Committee for American Allied War Relief of the Congress of Industrial Organizations. That same year Community Chests and Councils set up a National Budget Committee for War Appeals, and worked out a quota plan for the guidance of local communities in estimating their share of the amount needed.

In Jan. 1943, at the specific request of the President's War Relief Control board, the National War fund was organized to secure funds through local war chest appeals and also in smaller communities where no war chests existed. Included in the National War fund were the United Service Organizations, the United Seamen's service, War Prisoners Aid and 19 organizations sponsoring relief to foreign countries. Community Chests and Councils, Inc., assisted in the organization and operation of the National War fund through temporary loan of staff, participating in policy-forming and committee work and co-operative publications and activities. The budget and quota systems developed earlier by Community Chests and Councils, Inc., were adopted by the fund.

Most community chests became war chests. The total raised by community chests during four wartime campaigns was \$790,000,000, of which \$534,000,000 went to

health, welfare and recreation services in the United States, and approximately \$256,000,000 to national and international war appeals such as the U.S.O. and foreign war relief agencies. During three of the war years the community chests, operating as community war chests, appropriated more than \$195,000,000 to the National War fund, or about 60% of all the money raised by that organization.

Trends.—Accompanying the physical growth of the chest movement were the following basic trends in thought: A reaffirmation of faith in the principle of federated financing as a sound, democratic and efficient way to support voluntary community health and welfare services. Federation had been found to suit the mood and tempera-

ment of the U.S. people.

A strengthened conviction that money raising could not and should not be divorced from social planning. It was necessary for a community chest to assume responsibility for seeing that funds raised were spent wisely and fairly in the public interest. Inevitably, this led chests to accept more and more responsibility of planning for the health and welfare of the whole community. Sometimes this planning function was carried by the chest alone, sometimes by a separate council of social agencies, sometimes by a combined chest-council.

A similar conviction that the chest should continually grow as a broadly inclusive and democratic movement with all groups of citizens and community interests participating in its fund-raising activities.

A new realization that gifts to a chest were not "charity for the down-and-out" but community services, supported and used by people from all ranks of community lile. One evidence of this fact was the broad base of financial support enjoyed by chests (21 gifts per 100 persons in 1946). Another was the wide extent to which the services of chest member agencies were used by the citizens of a community. A study in Dayton, O., for example, revealed that 40 out of every 100 families had used the services of chest agencies that year. This new conception of the functions of chests was expressed in the theme of the 1946 campaigns, "Everybody Benefits—Everybody Gives."

A growing sense of national unity among chests and councils. In 1945 the name, "community chest" was officially adopted, and the red feather was chosen as the national campaign symbol. After the last campaign of the National War fund in the fall of 1945, local community chest campaigns were united for the first time under the name Community Chests of America, sponsored by a citizens committee representing all sections of the United States. This sense of unity, felt locally, was expressed nationally through certain actions taken by Community Chests and Councils, Inc., notably the following: (1) the creation of a National Budget committee to consolidate the budgeting lessons learned during wartime; (2) the creation of an Advisory Committee on Volunteer Service to promote the idea of volunteer service as "citizenship participation" in democracy, and to help local communities in their efforts to recruit and train volunteers and direct their skills into useful community peacetime service; (3) the creation of a new department on labour-employee participation in recognition of the greatly increased participation by labour in local planning and fund-raising. Community Trusts

At the start of the decade 1937–46, community trusts were still within the initial quarter century of their existence. The first of them, founded in Ohio in 1914, was the conception of F. H. Goff, banker and lawyer of Cleveland. In both his legal and financial activities, he had sought a medium of managing charitable funds that would combine factors of permanence, safety, flexibility and public participation. His conception materialized in the Cleveland foundation, and from there the idea spread to other cities.

In the 23 years following 1914, community foundations accumulated revenues of \$46,300,000 and were disbursing, in 1937, more than \$1,000,000 yearly.

Their roots, moreover, were strong, as the succeeding decade proved. The principal held by community trusts mounted to approximately \$75,000,000 at the end of 1946, and they were annually disbursing upward of \$2,000,000. In this ten-year span, the active—eliminating the "deferred"—funds of the New York Community trust rose from \$3,800,000 to \$17,000,000; those of the Chicago Community trust, from \$5,500,000 to \$9,600,000 and those of the Cleveland foundation, from \$3,800,000 to \$6,800,000. In that period, community foundations paid out \$17,500,000—\$4,000,000 of it from the New York organization, \$2,300,000 from Chicago, \$2,200,000 from Boston and \$2,100,000 from Cleveland.

Current receipts of these trusts rose similarly. The aggregate of their incoming funds was \$2,400,000 in 1937 and \$5,300,000 in 1945.

The number of community trusts continued to enlarge. During the 1937–46 decade, foundations were created in 16 cities—including, in the last three years of the decade—Columbus, Ohio, Spartanburg, N.C., Rochester, Minn., Champaign, Ill., Mt. Vernon, O., Pittsburgh, Pa., and Wilmington, N.C.

At the beginning of that ten-year interval, community trusts in possession of principal funds numbered 54, of which 42 were making periodical distributions. At its close, 65 trusts were holding funds and 54 of them were disbursing regularly.

The role of benefactions of modest size had long been emphasized by community foundations, but a late development was the creation of common funds, exemplified by the "Combined Fund" in the Cleveland foundation and the "Composite Fund" in the New York Community trust, permitting still smaller gifts to have the benefits of trust administration.

The objective of community foundations continued to be provision of a medium of administering multiple funds of varying sizes from diverse sources and for differing charitable uses. Customarily, the principal of a fund was held by an institutional trustee selected by the founder, and the distributable proceeds were allocated by a committee of citizens selected for their acquaintances with charitable needs. A minority of these were usually chosen by the trustee banks, and a majority by such public sources as the mayor, federal judiciary, probate or surrogate courts, presidents of the bar association, medical academy, etc.

If literal and continuing adherence to some portion of a program became ultimately impossible or impracticable in the judgment of the Distributing committee, it was empowered and instructed by the founder to take such remedial action as was required or appropriate in the light of the new conditions. The effect sought, in the words of Newton D. Baker, was "to substitute contemporary wisdom for foresight." A distinctive feature of a community trust, apart from providing a framework for the administration of a multiplicity of charitable funds, was this flexibility that gave promise of corrective action if an originally designated object became nonexistent or obsolescent.

The practical operations of these foundations could be illustrated, in general, by those of the New York Community trust. Sixteen fiduciary institutions adopted an identical basic "resolution and declaration" agreeing to accept, as trustees, funds to be held in accordance with its terms. The terms of that resolution were made a part of each will or trust deed creating a fund within the community trust. A bank or trust company receiving property so trusteed became responsible for its fiscal management; but all charitable appropriations had to be authorized by the central Distribution committee, five members of which were named by the associated trustees and the remaining six by the senior judge of the federal circuit court of appeals, the mayor of New York, and the presidents of the bar association, academy of medicine, chamber of commerce and Brooklyn Institute of Arts and Sciences.

The trustee chosen by a founder to hold his fund, controlled its investment and periodically reported on its status to the trust's Distribution committee, which instructed the trustee concerning outpayments. In so doing, the committee acted for the founder in giving effect to his expressed preferences or in exercising the discretionary authority vested in it by him.

A founder might name his fund, direct whether principal as well as income should be expended, and state his desires concerning specific charitable purposes to be assisted. The Distribution committee undertook to carry out those desires, subject always to its being empowered to amend them if, in the course of time, they became obsolete. Within the New York Community trust, upward of 75 funds were being administered at the end of 1946, and \$600,000 was annually paid out. (See also Donations and Bequests.) (R. Hs.)

Compton, Karl Taylor

Compton (1887-), U.S. physicist and educator, was born Sept. 14, 1887, at Wooster, O., the son of a clergyman and college professor. Both Karl and his two brothers became college presidents, with Karl as head of the Massachusetts Institute of Technology; Arthur as chancellor of Washington university and Wilson as president of Washington State college.

Karl Compton was graduated from the College of Wooster with a degree of bachelor of philosophy in 1908. He received his degree of doctor of philosophy from Princeton university in 1912; he taught physics at Princeton from 1915 to 1930 and was chairman of the department of physics from 1929 to 1930.

His most important scientific contributions were in the field of thermionics, the study of electronic emission from hot filaments and in spectroscopy (the investigation of matter by means of light waves).

As president of Massachusetts Institute of Technology after 1930, he greatly broadened the curriculum and intro-

duced a five-year plan of study that was designed to give students an insight into social and economic implications of their future professions.

Active in both World War I and World War II he served with the army signal corps in the first conflict, specializing in development of submarine detection devices. In World War II he served on various governmental committees and was associated with the original atomic bomb project. In 1946 he was appointed by Pres. Harry S. Truman to serve as a member of the president's personal committee on the atomic bomb tests at Bikini; he also was a member of the joint chiefs of staff evaluation board. In the post-Hiroshima discussions on atomic energy and defense Dr. Compton supported the president's plan for one year of military training for 18-year-olds, declaring (Nov. 21, 1945) that sneak attacks by atomic bombs would not be decisive, but an invasion following such attacks might defeat the U.S. if it did not have trained reserves.

Dr. Compton did not support the McMahon bill for placing atomic energy in civilian hands, declaring that he personally favoured the May-Johnson bill, which put control in military hands. He also favoured continued federal support for organized scientific research.

Compulsory Service, British

A step unprecedented in the history of Great Britain was taken by the government in the early part of 1939 when, owing to the menacing situation in Europe, a bill providing for a system of compulsory military training was introduced into parliament and passed. The Military Training act came into operation on May 26, 1939, and provided for the registration, medical examination and calling-up for training in the royal navy, army or royal air force of men aged 20. A special feature of the act was that the processes under it were carried out by a civil department of state, namely, the ministry of labour.

Only one registration took place under the Military Training act, which was superseded on the outbreak of war by the National Service (armed forces) act, 1939. This act was based on the Military Training act and passed through all stages in both houses of parliament on Sept. 3, 1939, the day on which war with Germany was declared.

The National Service act made all men from 18 to 40 years of age inclusive liable to be called up for service in the armed forces. Men were registered by successive age classes at the employment exchanges of the ministry of labour. At the time of registration they were permitted to express a preference for service in the royal navy, the royal marines, the army and the royal air force. While men were called up to the service of their choice wherever possible, this could not always be done, as the demands of the various services did not always coincide with the numbers available.

The next step in the process of calling-up was to differentiate between those whom it was necessary to retain in civil life on vital war production and those to be called up for the armed forces. The instrument used in the first place for deciding this and adjusting the balance between the requirements of the forces and the needs of essential civilian industry and services was the Schedule of Reserved Occupations. This consisted of a schedule of occupations with ages of reservation attached to each occupation. In general, men below the age of reservation for their occupations were called up for military service; those at or above the age of reservation were retained in industry. Alterations were made from time to time in the ages of reserva-

tion of the various occupations to accord with changing military and civil requirements. In order to meet exceptional cases in which it was not in the national interest that a man below the age of reservation in his occupation should be withdrawn from his civilian employment for military service, deferment of calling-up was granted. This system was sufficient for the first 18 months of the war, but by the end of 1941 it became necessary, owing to the increasing shortage of manpower in Great Britain, to examine the case of every reserved man to ascertain whether his retention in his existing employment was necessary in the national interest. This was done by raising the age of reservation for nearly all occupations by monthly steps of one year beginning on Jan. 1, 1942, exception being made in the case of men employed in certain services such as the merchant navy, civil defense, national fire service, royal observer corps and police. As men became dereserved, their cases were considered for further deferment by district manpower boards, 44 of which were created in various parts of the country and started work at the beginning of Jan. 1942. The system of reservation by occupations was thus gradually changed to a system of individual reservation.

Men not reserved for industry were called for medical examination by a medical board set up under the National Service act. Each board consisted of four doctors, who were required to grade men in one of the four categories, I, II, III and IV. Normally, only men in grades I and II were called up. Those passed as medically fit for service in the forces formed the reservoir from which men were called up in the numbers required to meet the needs of the armed forces. In allocating men to the various branches of the forces account was taken of age, physical and mental standard and civilian occupation and experience. Men with certain kinds of skill were earmarked for one or other of the service trades. Enlistment notices calling men up were issued by the ministry of labour.

The National Service act made provision for men about to be called up to apply for postponement of calling-up on account of "exceptional hardship." Under the act postponement could be granted for a maximum period of six months, but it was renewable on further application. The minister of labour had power to grant postponement, but where he did not grant an application it had to be referred to a Military Service (Hardship) committee, consisting of an independent chairman, a representative of employers and a representative of workers. In certain cases there was a right of appeal to an umpire whose decision was final.

Provisions for the reinstatement in their civil employment of men called up for service in the armed forces were contained in the National Service act. These were subsequently replaced by the Reinstatement in Civil Employment act, 1944, which extended and amended those provisions and came into operation on Aug. 1, 1944. In general, the Reinstatement act provided for the reinstatement, in their previous employment, of persons released from the forces, whether volunteers or conscripts, in the position they would have been in had they never been called up.

The National Service act made provision for conscientious objection. A man who alleged that he was a conscientious objector had to establish his case before a public tribunal which had power to direct (a) that the applicant should be registered without conditions as a conscientious objector; (b) that he should be registered as a conscientious objector on condition that he undertook work of a civil character under civil control specified by

the tribunal; (c) that he should be called up for noncombatant duties in the forces. If the tribunal considered that an applicant had not established his case, the man then became liable to be called up for service in the armed forces in the ordinary way.

In April 1941 the National Service act, 1941, extended the liability of men to be called up to the armed forces to a civil defense force, that is, the police war reserve, national fire service and civil defense reserve. Accordingly, as from April 1941, new registrants under the National Service acts above the age of 30 at registration, and men becoming de-reserved under the revised Schedule of Reserved Occupations who were at or above the age of 25 on their prescribed registration day, were permitted to express a preference for a civil defense force. Postings to the police war reserve were virtually discontinued in Dec. 1942, to the national fire service in July 1943 and to the civil defense reserve in Oct. 1944.

In addition to the powers contained in the National Service act, 1941, enabling the minister to call up men to the police war reserve, national fire service and civil defense reserve, the minister of labour also had power under defense regulations to direct men and women to enrol in the other civil defense services, royal observer corps and special constabulary, either whole time or part time. Up to the beginning of Sept. 1944, after which directions were suspended, some 496,000 directions were issued for part-time service. By order in council made in Jan. 1942, the minister of labour was given power to direct men to join the home guard which, under the title of local defense volunteers, was formed in May 1940. By the beginning of Sept. 1944 about 916,000 had been so directed.

The issue of directions to persons to enrol in the home guard was suspended in Sept. 1944. Later in the year the home guard was stood down; it was disbanded on Jan. 1, 1946.

After Sept. 1942, young men under 25 years of age who became available for posting to the armed forces were given an option of taking up underground employment in coal or other mining. In July 1943 this option was extended to fit men of effective military age subject to certain exceptions. After Dec. 1943 men were selected by ballot for direction to coal mining from among young men up to 25 available for military service. Exclusion from the ballot was limited to three classes:—(1) men accepted for flying duties in the royal air force or fleet air arm; (2) men accepted as artificers in submarines; and (3) men in a short list of highly skilled occupations who were called up only as tradesmen in the armed forces. Recruitment for coal mining by means of the ballot was discontinued in May 1945.

In Dec. 1941 the National Service (No. 2) act, 1941, was passed, increasing the military age up to and including 50 years of age. A year later, in Dec. 1942, the National Service act, 1942, reduced to 17 years 8 months the age at which men could be registered, although the age at which a man became liable to be called up for service in the armed forces continued to be 18 years. The registration of the 20 age-class in June 1939 was followed by the registration of successive age-classes up to 40. By the end of the war in Aug. 1945 all men born between July 1, 1900, and Sept. 30, 1927, had been registered under the National Service acts, the total numbers so registered amounting to 8,350,000. Fit men aged 18 to 40 inclusive not reserved or deferred were called up to the armed forces or the civil defense forces. As regards men above the age of 40, only doctors and dentists in the age-classes

41 to 45 (inclusive) were called up. The total number of men called up under the National Service acts from June 1939 to Aug. 1945 was 3,040,000.

In addition, about 2,000,000 men were enlisted as volunteers in the armed forces.

Women were made liable to be called up for service in the women's auxiliary services and the civil defense forces by the National Service (No. 2) act, 1941, the first time in the history of Great Britain that women had been conscripted. Women so called up were given the same statutory protection and safeguards as were enjoyed by men, as regards conscientious objection, postponement of callingup on grounds of exceptional hardship and reinstatement on discharge from the forces. Women called up under the act were in the first instance allowed to express an option for the women's auxiliary services, civil defense, or such specified civilian jobs as the minister of labour from time to time directed. The civil defense option was subsequently withdrawn, and women called up were given a choice between the women's services and certain civilian employments. From Jan. 1944, owing to the pressing needs of industry, the forces option was suspended, and women who became available for calling-up were all allocated to priority civilian employment. Married women and women with children of their own under 14 years of age living with them were exempted from compulsory service in the women's auxiliary services and civil defense forces. Women called up for the women's auxiliary services were required to use lethal weapons only if they volunteered to do so. So far as was practicable, women called up to the services were posted to units near their homes.

The scheme for registration by successive age-classes, medical examination and call-up was the same for women as for men. There was, however, no Schedule of Reserved Occupations for women, but women who were engaged in certain vital war work or service were regarded as reserved from calling-up. The list of occupations and services from which women were not called up was revised from time to time. Other women had their calling-up deferred if they were engaged on work of importance to the war effort. Women in the age-classes 18 to 50 inclusive were registered for national service, but only those in the age-classes 19 to 24 were compulsorily called up for service in the women's auxiliary services and civil defense forces. Women in the other age-classes were called up for transfer to vital war work.

Recruitment for the women's auxiliary services by means of compulsory call-up came to an end in Jan. 1944. Between Jan. 1942 and that date about 126,000 women were called up. Only 2,000 women were posted to the civil defense forces. (See also British Women's Services, World War II.)

The National Service (Foreign Countries) act, 1942, enabled certain British subjects, men and women, in foreign countries to be called up for military service. An order in council was made on Aug. 6, 1942, applying the act to Egypt, as a result of which a system of compulsory service for British subjects in Egypt became operative.

The Allied Powers (War Service) act, 1942, gave the minister of labour power to make orders in council imposing on men of military age of any Allied nationality a liability to be called up to the British armed forces if they had not within a specified period joined their own national forces. By an order in council made on March 11, 1943, the nationals of those Allied Powers whose governments were at that time temporarily established in the United

Kingdom and who possessed national armed forces were made liable under the act. These Allied powers were Belgium, Czechoslovakia, Greece, the Netherlands, Norway, Poland and Yugoslavia. Further orders in council on Aug. 10, 1944, applied the provisions of the act to nationals of France and the U.S.

Dominion and other British subjects from overseas, who had been resident in Great Britain during any continuous period of three months, were made liable to military service in the British armed forces by the Defense (National Service) regulations, made on Jan. 20, 1944. The regulations included nationals or citizens of Canada, Australia, New Zealand, Newfoundland, the Isle of Man, Channel Islands and of any colony, protectorate or mandated territory under the crown.

The peak of the mobilization of manpower was reached in Sept. 1943, after which the total in the forces, civil defense and industry began to decline. In spite of this, however, the intensity of mobilization for operational war purposes continued to increase, with the result that the maximum strength of the armed forces was reached on D-day and maintained at that level until the end of the war with Germany in May 1945. At D-day, more than 4,500,000 men were serving in the armed forces, compared with less than 500,000 at mid-1939. This total had been reached in spite of casualties sustained during nearly five years of war. Including the number killed, missing, taken prisoner or released on medical grounds, the total number of men who served in the armed forces during the war was about 6,000,000. Of these, 3,000,000 were called up under the National Service acts. At D-day the strength of the women's services had reached 470,000. Including casualties and those released on medical grounds, the total number of women who served in the women's services during the war was about 640,000. Of these, about 126,000 were called up compulsorily.

Following the end of the war with Germany, men and women were released under the "age and length of service" re-allocation of manpower scheme. This was initially an interim scheme for operation between the end of the war with Germany and the end of the Japanesc war. Following the collapse of Japan in Aug. 1945, this interim scheme became the demobilization scheme, under which the great majority of the men and women were released according to age and length of service (class A); a small minority were released on account of their special qualifications for urgent reconstruction work (class B). By the end of Dec. 1946 nearly 4,000,000 men and more than 250,000 women had been released.

At the same time that releases from the forces were taking place men were still being called up compulsorily. The maximum age of call-up was lowered to 30 in May 1945. As from Jan. 1, 1947, compulsory call-up was limited to young men reaching the age of 18. Those called up during 1947 would serve for a fixed period of two years; those called up in 1948 would serve for, a period decreasing from two years to 18 months.

Conant, Gordon Daniel

Conant (1885—), Canadian politician and jurist, was born Jan. 11, 1885, at Oshawa, Ontario. He was graduated from the University of Toronto with a B.A. degree, receiving his LL.B. degree in 1912. Admitted to the Ontario bar in 1912, he practised law in Oshawa. Later he went into politics and was secretary of the Liberal association for 25 years. He was elected to the Ontario legislative assembly for the Riding constituency, Oct. 6, 1937, and was appointed attorney general for Ontario six days later. Conant succeeded Mitchell Hepburn as prime minister of Ontario, Oct. 21, 1942. Conant himself resigned the following year because of ill health and later in 1943 was appointed master of the supreme court of Ontario.

Conant, James Bryant

Conant (1893—), U.S. scientist and college president, was born March 26, 1893, in Dorchester, Mass. Entering Harvard university in 1910, he specialized in chemistry and was graduated in 1913. After receiving his Ph.D. degree in 1916 he was appointed chemistry instructor on the Harvard faculty. He served in World War I with the government's bureau of chemistry and bureau of mines, worked on war gases and was a major in the army's chemical warfare service, 1917–18. Returning to Harvard after the armistice he became an assistant professor of chemistry in 1919. By 1928 he was Sheldon Emory professor of organic chemistry.

Dr. Conant became president of Harvard in 1933. A long-time foe of narrow specialization, he fostered many educational advances at the university as well as continuing his work in his chosen field of organic chemistry. He was widely recognized for his scientific contributions, particularly for his research and investigations in regard to chlorophyll and the nature of haemoglobin. He was also a director of the Rockeleller institute, served on the government's advisory committee on cancer research and wrote many papers and books on organic chemistry.

During World War II he ran Harvard on a war basis, serving both the army and navy, and planned for postwar reconversion of the university with special attention to the needs of returning servicemen. In Feb. 1941 he went to England as head of a three-man commission to confer with British scientists on new scientific developments, including presumably knowledge gained in atomic research. That same year he was made chairman of the National Detense Research committee; in this capacity he advised and assisted the government on such top-secret matters as development of the atomic bomb.

Dr. Conant testified in opposition to the legislation calling for a year's compulsory military training for 18-year-olds. He declared Nov. 29, 1945, that development of the atomic bomb required a study of future defense needs before a compulsory military training program was adopted. With regard to the controversy regarding the atomic bomb and the soviet union he urged, Dec. 3, 1945, an immediate exchange of scientific information and scientists between the U.S. and the U.S.S.R. as the first step toward prevention of an atomic armament race. On Dec. 12, 1946, Dr. Conant was appointed by Pres. Harry S. Truman to head a general advisory committee to advise the Atomic Energy committee on scientific and technical matters.
